

Boy's Slayers Seek To Stop Pursuit By Threatening Letter

Father of Kidnaped Schoolboy Reports Receipt of Missive

POLICE CORDON FORMED

Anonymous Telephone Calls Carry Death Threats to Frank Residence

By Associated Press
Chicago—A police guard was hurriedly thrown about the home of Jacob Franks, father of the slain 14-year-old victim of kidnapers Saturday after new threats of violence had been reported to State's Attorney Robert E. Crowe by members of the family.

Anonymous telephone calls to the Franks residence, the father reported to the state's attorney, warned of further outrages if the hunt for the slayers continued. Chief of Police Morgan A. Collins and Chief of Detectives Hughes, after a protracted conference Saturday afternoon issued a joint statement predicting "poisoned developments" in the baffling and tragic mystery.

THREAT SENT BY LETTER

A threatening letter also was received at the Franks home Saturday. Its contents were not made known at once, but it was said to be written in poor English, much different from the style and construction of the original ransom letter demanding \$10,000 which was received on Thursday morning.

The letter, according to Samuel A. Ettelson, attorney and friend of the family, said, purported to come from the kidnapers and threatened death to the members of the family unless the investigation was stopped.

A woman had telephoned to the house shortly before about a confidence man with whom she had been intimate, and who, she said, according to Mr. Ettelson, had talked about kidnapping. This was being investigated, he said.

The police intimated that developments might result in an arrest soon.

Chicago—Science Saturday had satisfied the authorities that Robert Franks, killed by suffocation when kidnaped for ransom, and science, too, had pointed the way to identification of the ownership of the peculiar spectacles found near the swamp where the body was found in a culvert. The spectacles are such as are ordinarily worn by a woman.

Coroner Oscar Wolff announced that the boy was a victim of suffocation after his chest had found no external cause of death, no metallic poisons in the vital organs, and concluded that a hand or cloth pressed over the lad's mouth brought death.

The spectacles, narrow from temple to temple, with comparatively straight bows such as usually worn by a woman, concave lenses intended for street wear by a far sighted person, were taken to one from presentence, a Chicago optician declared.

He reconstructed the prescription after an examination of the spectacles as follows:

Both eyes: plus 50 cylinders; axis 90 degrees; both eyes pupillary distance, 65 millimeters; lens circumference, 40 millimeters; six-inch skill fit temples; toric lenses; frame material all berylone.

From these deductions, the optician believed the owner of spectacles could have been a woman, because of the bows, or a man, although men usually prefer rounded bows to hook over the ears. The wearer, either he or she, the optician believed, is of nervous perhaps neurotic tendency, rather intellectual and temperamental, one leading a sedentary life. The person he added, was one of longer rather than round head, short reach from temples to ears and narrow frontal. The lenses were specially ground, he said.

EIGHT KILLED WHEN TORNADO HITS MISSOURI

Meager Particulars Sift Through Despite Fact That Wires Are Down

By Associated Press
St. Louis, Mo.—Eight are dead as the result of a severe wind and electrical storm in southern Missouri Friday night. H. Jordan, telephone manager at Charleston, telegraphed the Southwestern Bell Telephone Co. here Saturday.

Jordan's telegram filled from Poplar Bluffs, Mo., at 9:27 A. M., said one was reported dead at Caruthersville and seven at Essex. Earlier messages from L. D. Randall, telephone manager at St. Louis, said seven are reported injured in that vicinity. No confirmation of the number of dead was available here shortly before noon.

Poplar Bluffs, Mo.—Seven persons are reported killed at Gray Ridge, Mo., and one at Caruthersville, Mo., in a severe wind storm Friday night. One block was reported destroyed at Caruthersville. No particulars were available here as telephone and telegraph lines were out.

NO DETOUR SUNDAY ON GREEN BAY-RO

Autolists will be able to use highway 15 all the way from Appleton to Green Bay Sunday without the necessity of a detour where Kopske Bros. are preparing to widen the concrete. The barricades have been taken down, leaving the concrete roadway clear all the way.

The contractors were unable to begin paving this week because of the weather and therefore decided to reopen the highway for Sunday. It is possible that the road will be open Monday also, as paving may not start until Tuesday.

MOTHER BURNED TO DEATH WITH SONS AGED 4, 6 AND 8

By Associated Press
Pocatello, Idaho—Mrs. Isaac Kovens and her three sons, aged four, six and eight, were burned to death early Saturday when the Kovens home at Georgetown, Idaho, near Montpelier, was destroyed by fire.

An infant girl was found by neighbors some distance from the burned home and it is believed Mrs. Kovens carried the baby to safety and then was trapped when she entered the burning home to rescue her sons.

ITALIAN RESTAURANT IS WRECKED BY DYNAMITE

By Associated Press
Madison—A dynamite bomb placed under an Italian quarter restaurant here owned by Rudolf Jessner, shortly after midnight blew large holes in both sides of the building and broke windows in residences for several blocks around. The restaurant was closed at the time of the explosion. Police are investigating.

G. O. P. CHIEFS SEEK TO RUSH BILLS THROUGH

Administration Would End Uncertainty Which Is Fear of Business

TRY TO ADJOURN BY JUNE 7

Bonus Fight Revived When Movement for Cash Option Is Started

By DAVID LAWRENCE
Washington, D. C.—Uncertainty is the principal foe of business in America today and therefore administration leaders are determined that every effort shall be made to adjourn congress and end the uncertainty by June 7.

Secretary Mellon's disappointment over the failure of his tax revision plan which logically means that he will recommend that the bill be vetoed by President Coolidge carries with it the implication that he may resign from the cabinet unless the chief executive stands with him. But the older heads in politics are urging the administration to go slow about a veto lest the Republican party play directly into the hands of the Democrats. Mr. Mellon's theory has been right along that if the bill were vetoed, a separate resolution reducing 1923 taxes payable this year could be passed and the issues in the pending bill itself fought out in the campaign. But the Democratic coalition with the insurgent Republicans would simply operate to tack on to the joint resolution enough amendments to make it objectionable again to the treasury department.

WOULD OVERHAUL VETO

Indeed, there is every indication that if Mr. Coolidge vetoed the tax bill it would be passed overwhelmingly over the veto. This is because congress as a whole thinks the bill that has come out of conference is a compromise—the best bargain that can be obtained at the present time, that it represents a material cut over the present law and that further revisions can be obtained at the December session of congress. The motto of congress, as a rule, is "Take What You Can Get." An uncompromising disposition on the part of the executive would in the present circumstances mean a prolongation of the tax controversy and just now senate leaders are saying the important thing is to get some bill passed and disgested so that business can make the plans accordingly.

OTHER QUESTIONS DRAGGING

Hanging over the business world, however, are other questions of which congress has as yet failed to dispose. The McNary-Haugen bill carrying an appropriation of \$200,000,000 will again upset calculations if passed, for no provision has been made to raise the needed revenue to meet it. The friends of the measure are said to be anxious, however, to put the bill through the house so they can carry the fight to the country during the next campaign. The chances are the senate will not pass the McNary-Haugen bill this session.

Already it is apparent that the soldier bonus issue is not closed, for the friends of the measure are being made by the effect that in the next session of congress an amendment will be sought whereby cash would be given immediately to the veterans instead of at the end of 20 years.

RAIL BILL UNCERTAIN

Some uncertainty more or less invisible but nevertheless carrying apprehension to the railroad world is involved in the Howell-Barkley labor board and the discussion of a repeal of the so-called earning clause of the transportation act. The railroads and those who hold their investment securities will breathe easier when congress adjourns.

The Republican administration is not at all happy over these clouds of uncertainty and wants to go to the country with a slogan of prosperity. Men like Senator McNary, who will stimulate business. More than that, the moment doubt as to action of congress are removed, the business situation as a whole will be benefited. So the drive is to clear the decks and go to the country for a good old-fashioned campaign on the merits of conservatism, progressivism and the prosperity or lack of it, depending on which party is talking on the stump.

STUDENT WAS SHOT FROM PORCH, CLAIM

Powers Counsel Charges Prejudice in Favor of Slain Student

By Associated Press
Madison—On May 29, Judge O. A. Stolen of the Dane county court will render his findings in the preliminary hearing of Patrick J. Powers, Madison policeman held for manslaughter in connection with the shooting of Peter M. Posepny, University of Wisconsin student. Preliminary hearing in the case was completed late Friday. The principal development in the hearing was the charge made by Assistant Attorney J. E. Messerschmidt, that Posepny was shot from the back porch of the Powers home and not from the yard as claimed by the policeman. Messerschmidt, representing the attorney general's department, declared that the position of the body and the bullet wound indicated that the student was shot from the rear, probably as he was leaving the Powers porch. Attorney Gilbert, appearing for Powers, made a strong plea for release of the policeman on the grounds that he was protecting his premises and could not see who it was he was shooting. That many are prejudiced merely because Posepny was a student also was argued by the defense.

TRAIN HITS AUTO; ONE DEAD, ONE HURT

By Associated Press
Chippewa Falls—Thrown in front of a See Line passenger train as it passed through Ladysmith Saturday, Frank Francart, 45, was instantly killed while George Beuleu, driver of the automobile truck struck by the locomotive, escaped with minor injuries. Francart was thrown with the car five feet against a post on the right of way. The car tossed him back upon the track in front of the engine which passed over him. The accident occurred at one of the main crossings of the city.

It was said the men were watching a switch engine and failed to notice the approaching passenger train.

CHICAGO, NORTHWESTERN EARNINGS TAKE SLUMP

By Associated Press
New York—The Chicago and Northwestern railway earned \$4.2 a share on the common stock in 1923, after preferred dividends, compared with \$5.95 a share in 1922. Net income was \$5,737,458 against \$5,597,535 the year before.

BOY DIES, MOTHER AND BROTHER ESCAPE FIRE

By Associated Press
Duluth, Minn.—One person perished and two others barely escaped death here Saturday when a fire swept through a frame building, trapped in a second story bedroom William Nordstrom, 14, died while his father, William Nordstrom and neighbors battled the flames to rescue Mrs. Nordstrom and a small son.

One Is Her Baby

Fannie Lockwood, 17-year-old St. Louis girl mother, has a task on her hands. She must decide which of three babies is the one that was taken from her a week after its birth. These are the three from which she must make her choice. All are 4 months old now. Blood tests probably will solve the tangle.

COMMITTEE BACKS ADHESION OF U. S. TO WORLD COURT

Resolution Adopted Follows Proposal Suggested by Senator Pepper

By Associated Press
Washington, D. C.—Adhesion of the United States to the permanent court of international justice was endorsed in a resolution reported Saturday by the senate foreign relations committee.

The resolution adopted by the committee follows closely the complete proposal put forward by Senator Pepper, Republican, Pennsylvania. The committee action brings the world court technically before the senate for the first time but there is little hope in any quarter of a vote during the present session.

Before taking up the plan eventually reported, the committee voted down, 10 to 8, the proposal prepared by Senator Swanson, Democrat, Virginia which compromised substantially the proposal transmitted to congress by Presidents Harding and Coolidge.

The vote on the Pepper plan was 10 to 6, all the Republican members except Senator Johnson, California, being recorded in favor and the Democrats present in opposition.

LUTHERAN URGES MORE SOCIAL WORK

Milwaukee—In the church there is a certain smugness, a certain self-satisfaction, a complacency which is retarding the progress of congregations, church schools and inner mission endeavors, according to a statement made by the Rev. C. F. Schaffnit, superintendent, inner mission society, Toledo, O., before the annual Lutheran inner mission conference here Saturday.

No one believes more than the churchmen that he is accomplishing a righteous work in the fields of Christian endeavor, the speaker asserted, yet most churchmen are blind to work going on in which they have no hand, according to the Rev. Schaffnit. He cited social service work as an example of this and urged a greater interest in this subject by Lutherans.

PRESBYTERIANS ADOPT PENSIONS FOR WORKERS

By Associated Press
Grand Rapids, Mich.—The Presbyterian general assembly adopted a pension plan for ministers, missionaries and other accredited workers of the church, effective April 1, 1924, or sooner, prepared by a special lay committee of which William Hays, president of the Motion Pictures Producers and Distributors of America is chairman.

BOY DIES, MOTHER AND BROTHER ESCAPE FIRE

By Associated Press
Duluth, Minn.—One person perished and two others barely escaped death here Saturday when a fire swept through a frame building, trapped in a second story bedroom William Nordstrom, 14, died while his father, William Nordstrom and neighbors battled the flames to rescue Mrs. Nordstrom and a small son.

Blaine Caused Failure Of Tax Cut, Is Charge

NAVIGATION IN RIVER TIED UP FOR TWO WEEKS

Fifth Lock at Kaukauna Is Broken and Tug Is Damaged in Accident

Kaukauna—Navigation on the Fox river will be at a standstill for two weeks or a month as a result of an accident at the fifth lock about 10 1/2 miles from Kaukauna, where the tug George D. Ryan was damaged, the entire lower end of the lock was torn away and Barge No. 1 of Kimberly was washed against an island at the edge of the channel. The barge was tossed into the channel and was securely wedged with an end on each side of the entrance to the lock.

The whole incident started and was over before members of the crew had time to act. Barge No. 5, being towed by the tug George D. Ryan, was in the lock and the gates upstream were being opened to allow the boats to continue on their trip. Tug Jane followed close behind towing Barge No. 1. The Jane floated into the channel below the lock and when a member of the crew was unable to get a rope securely around the posts to hold the boats, the loaded barge struck the right gate of the lock, forcing it open far enough to start a rush of water from within the locks.

Once started, the water flowed out of the lock with tremendous force against which the 12 horsepower tug was helpless. The right gate at the lower end of the lock was completely ripped from its place and carried 20 feet down stream. The left gate was forced around on its pivot against the canal wall, damaging the tug Ryan and its barge. Further damage to the barge resulted had the two barges collided in the scabbing current.

Both crews work all day in an attempt to force the back end of Barge No. 1 off the island where it was grounded. Ropes were passed around the bottom of the vessel and attached to the Jane which made a valiant effort.

STATE SECRETARY SAYS FINDINGS ON COBBAN DISAGREE

Zimmerman Will Not Contest Case in Courts in View of Verdict

Madison—Claim that the state civil service commission found that A. J. Cobban was dismissed for "good and sufficient cause" and yet declared the service law had been violated in the discharge was made by Secretary of State Fred R. Zimmerman in a statement here Saturday regarding the Cobban ruling made public on Wednesday.

Mr. Zimmerman indicated that he will not contest the case in the courts, since the commission held Cobban was discharged legally on the face of charges and no effort to reinstatement him to the state department is to be made.

In granting a hearing to Mr. Cobban, the commission in a letter dated April 3, informed him that it was "making investigation to determine whether or not the civil service law has been violated by the discharge of Mr. Cobban from service for political or religious reasons." Mr. Zimmerman's statement said.

In its report according to the papers it finds that allegation of Mr. Cobban that his discharge for religious or political reasons was not conclusive.

"If the hearing was granted, as stated in the letter on the ground of religious and political reasons and the commission finds this allegation not conclusive, the discharge must have been for good and sufficient cause."

The secretary of state declared that no additional clerks had been employed to fill Mr. Cobban's place although the service commission declared in its findings that this action had been taken.

VICTOR EMMANUEL OPENS PARLIAMENT

King of Italy Advocates Strong Armaments to Protect Country

Rome—The new Italian parliament was opened Saturday in state. King Emmanuel attending with other members of the royal family and delivering the speech from the throne. That it was the ninth anniversary of Italy's entry into the war.

He said the annexation of Fiume was a resolute stroke of foreign policy, calculated to assure for Italy the place to which she was entitled among the nations.

The Italian nation, sure of its future, he added, gave formal approval to the new political situation which was not the result of a temporary grouping of combinations but the expression of a historical phase of the highest significance.

Italy could not remain unarmed among armed nations, and could not permit the great risk of being taken unarmaged, he continued. The foreign policy must be one of peace with dignity and designed for the protection of Italy's interests.

TRIPLE ARREST WILL CLEAR CRIMES, BELIEF

By Associated Press
New York—Arrests of three men here Friday night in connection with a huge bond theft, police believe, Saturday will clear up a bank robbery at Walton, Kan., in January, 1923, another in Denver soon after and the slaying of the two men in St. Louis in October 1923.

BRAIN TUMOR CAUSES DEATH OF LINDBERGH

By Associated Press
Crocketon, Minn.—Charles A. Lindbergh, former candidate for the Far West—Labor gubernatorial nomination and for 20 years active in Minnesota politics, died at a hospital here Saturday from a brain tumor.

EDITORIAL ASSOCIATION ELECTS OKLAHOMAN HEAD

Oklahoma City, Okla.—Edgar S. Bacon, publisher of the Ereno Oklahoman, was elected president of the National Editorial association at the concluding session of its thirty-ninth annual convention here.

President of County Board Association Accuses Governor in Letter

CONTINUE HIGHWAY WAR

People of State Demand Answer Showing Why Revenues Were Not Reduced

By Associated Press
Madison—Charges that Governor Blaine is "playing politics" in his action directed against the state highway commission and "giving little attention to constructive common sense thinking along economic lines" are made by R. W. Davis, Bangor, president of the County Board association of Wisconsin in a letter directed to Governor Blaine and made public here Saturday.

The county board president also charged that Governor Blaine is directly responsible for the failure of the last legislature to reduce taxes. He criticized the governor for vetoing the gasoline tax bill, declaring that "you not only prevented the enactment of the gasoline tax bill but every other bill that might have relieved the burden of taxation in Wisconsin."

The letter was written, according to Mr. Davis' statement, in answer to certain statements made by Mr. Blaine in his communication to the highway commission early this week.

"In view of statistics recently published by the state tax commission, would it not be advisable for you to attempt to reduce state expenditures in all departments before sending out your numerous circular letters of government advising them to reduce taxes?" Mr. Davis' letter asked. "Economy, like charity, should begin at home and undoubtedly you could find a fertile field for the attempt at economy under the dome of the capitol."

PLAYING FOR VOTES

"If you are sincere and not merely playing for votes for reelection or governed by personal bias and grivances, other departments should receive your attention in your efforts for reduction of state expenditures."

Davis further charged that Governor Blaine made his attack upon the highway department because of "personal prejudice." He further declared that the people of the counties and localities have complete voice in whether or not funds shall be expended for highway construction adding: "Why not turn your direct attention to the state government and let the people run their own affairs, and 'the people know what they want and it is none of your business nor that of the highway department what amount they vote for highway construction?" He called upon the governor to explain why he vetoed the gasoline tax bill declaring that the voters have a right to know the burden of taxation somewhat.

CIRCUS OWNER IS FREED OF CHARGE

Rider Employed by Showman Held for Slaying of Peter Campbell

By Associated Press
Prairie du Chien—Clifford Gatewood, wildcat circus owner, held in connection with the death of Peter Campbell who was found near here last winter with his skull crushed, was ordered released from custody Friday but Russell Stonker of Emmetsburg, Ia., is being held for the disposition of the jury and the court.

Gatewood's discharge from custody was ordered after 15 witnesses for the state had been examined and the state had rested its case. When the release was ordered and Stonker, a rider for Gatewood, was ordered held, the mother of Stonker became hysterical and had to be removed from the courtroom before the court session could proceed.

CIVIC CLUBS WANT COUNCIL TO VOTE PLAYGROUND FUND

Supervised Play Will Be of Big Benefit to City, Leaders Declare

Request for an appropriation sufficient to conduct one supervised playground in Appleton this summer, preferably at Jones park, will be asked of the common council at its next meeting as a result of the conference of civic organizations Friday evening at the chamber of commerce. The playground is desired as a demonstration of its value to the city.

There appeared to be no question among those present as to the value of supervised play out of doors in the summer time for children. It is estimated that \$3,000 will be needed to pay the cost of supervision and game material for two months.

Appleton Women's club, the chamber of commerce and Rotary, Lions and Kiwanis clubs were represented at the conference. Miss Josephine Randall, field secretary of the National Playground association, also was present. The meeting was called by Mr. C. Shannon and Louis Bonini acted as chairman.

One of the principal arguments in favor of playgrounds as expressed in the discussion was the fact that the people pay thousands of dollars for supervision of their children in study and play during nine months of the year and then restrict the supervision to nothing during the remaining three months with big returns. It was said. The community spends its money for courts which deal with children who have become wayward and it would be worth ten times as much to devote this money to preventative measures that would have kept at least one out of the bath of crime.

Play is a part of education and needs direction, said one of the speakers. The remarkable accomplishments of other cities were described by Miss Randall. It was said that the park board would furnish the fixed apparatus at the parks if the supervisors of play would provide in some other way.

Cost Of May Fete Is Paid By Insurance

Rain which caused the Lawrence college May fete to be postponed from Friday to Saturday also paid all the expenses of the fete and left some to the good. The fete was insured for \$600 against rain and the insurance was paid on Saturday morning. This is the first time that a college May fete has been insured against rain but far from the first to be postponed because of inclement weather.

Unless the weather becomes much warmer by afternoon, the committees in charge decided Saturday morning to put on the program in Lawrence Memorial chapel on Saturday afternoon. The crowning of the queen and the dances of her honor and one of the plays of the program were scheduled for 2 o'clock in the chapel. A tumbling act and several other entertainments were planned for the gymnasium.

LAY CORNERSTONE OF NEW CHURCH SUNDAY

The corner-stone of Trinity English Lutheran church will be laid by the Rev. F. L. Schreckenbach, pastor, at 8:30 Sunday afternoon at the site of the new building, corner of Allen and Kimball sts.

The principal address of the service will be by Dr. K. Keller Rubrecht of St. Paul, Minn., president of the Synod of the Northwest. Other speakers will include Mayor John Goodland, Jr., The Rev. Milton G. Haker, New London; the Rev. A. J. Semmer, Neenah; the Rev. W. C. Drahn, Oshkosh. St. Paul choir of Oshkosh, will lead the singing. The building is to cost \$70,000 and will be one of the English Gothic period, patterned after the English country-house church, with low walls and high roof. The architect is H. C. Hauser of Milwaukee.

Official Warning
Absolutely no foundation to rumor that Buick valve in head type of motor will be discontinued, says Buick President.
Mr. G. G. G. Peckham, The Ohio-Buick Company, Cleveland, Ohio.
Dear George—
In reply to your inquiry of yesterday, there is absolutely no foundation whatsoever to the report being circulated that Buick is going to use an L head engine.
Twenty years' experience with the valve in the head type motor has conclusively proven to us its great superiority in economy of operation, excess power over other types and long life with freedom from trouble. No indeed! We shall never give up the great advantage we have enjoyed so long in this type of motor.
On my recent trip abroad I was greatly gratified to see many of the higher priced foreign cars adopting the valve in the head principle along with cantilever spring suspension.
Very truly yours,
(Signed) H. H. Bassett,
President and General Manager.
HMB-o.

COMMENCEMENT AT HIGH SCHOOL WILL START ON MONDAY

Annual Senior Class Play Monday Evening Starts Graduation Program

Commencement events at Appleton high school will begin on Monday and continue through Thursday. Field day program will take place at Pierco park on Monday afternoon to determine the class which has the most prowess in track and sport events.

One of the programs which has the greatest interest for Appleton people is the senior play which will take place at Appleton theatre on Monday evening. "Green Stockings" is the play chosen for the class this year with Robert Pugh and Dorothy Asht in the leading roles. Mr. Pugh is to be Capt. John Smith and Miss Asht will be Celia Faraday. John Bonini will be William Faraday, Carl Thompson, Robert Tarver; Maurice Lewis, Admiral Grice; William Hornbeck, Henry Steele; Howard Menzner, James Raleigh; Cyril Agrell, Martin; the ballet: Editha Berg, Phyllis; Iona Kreisel, Evelyn, Lady Trenchard; Louise Ruch, Madge, Mrs. Chisolm Faraday.

CLASS DAY EXERCISES
Elaborate plans have been made for class day exercises on Wednesday afternoon. A large number of students will take part in the pageant, "The Gift of Memory," which was written by Miss Olga Achtenberger for the occasion. She is in charge of its production. Gifts to the school, the giving of the traditional gifts to members of the junior class and the planting of the ivy are a part of the program.

A processional will open the commencement exercises at Lawrence Memorial chapel on Thursday evening. The invocation will be made by the Rev. J. L. Menzner whose son is a member of the graduating class. Orations will be given by Miss Marie Voocka, valedictorian of the class, and Harold Zuehlke.

Musical selections will be given by

Need 40 Cars Next Friday For Veterans

Owners of automobiles who will loan their cars for use in conveying aged war veterans in the Memorial day parade are asked to send word at once to James H. Balliet, chairman of transportation. His telephone number is 22.

Mr. Balliet needs about 40 cars during the parade and exercises at Lawrence Memorial chapel and the cemetery. These will be used for the Grand Army of the Republic, the Women's Relief corps, J. T. Reeve circle auxiliary to the G. A. R. and others who usually are provided with this service on Memorial day.

Car owners are asked to inform Mr. Balliet as to the number that can be accommodated in his car so he will know when the quota has been obtained. Reports are desired by telephone by Tuesday noon if possible. The chairman requests that people arrange their activities for the day in such a way that their automobiles will be available for this patriotic duty.

CITY ATTORNEY BOSSER TAKES BUSINESS PARTNER

Attorney B. D. Cannon, son of Mr. and Mrs. S. D. Cannon of Dale, has associated himself in law practice with A. C. Bosser, city attorney. Mr. Cannon was graduated from the Marquette university law school in 1923 and was admitted to the Wisconsin state bar. He formerly was associated with the law firm of Klusset, Harriman and Knappe of Milwaukee, but was forced to give up his work there because of ill health.

members of the class. Oscar Hoh will play a violin selection, Mae Eller, a piano solo and Pearl Felton will sing a vocal solo. Miss Lorraine DeLand will give a reading. The American legion athletic medal is to be presented and Lee C. Rasey will give the diplomas.
Class picnics will take place on Saturday. These are held each year but are not a part of the commencement exercises.

MARINETTE MAN FAILS TO RETURN CAR RENTED HERE

Police in Green Bay Arrest Robert Prickett on Two Charges

G. J. Schwab, manager of the Ford Rental Co., Inc., 845 College-ave, went to Green Bay Saturday afternoon to take possession of an automobile which Green Bay police had recovered from Robert Prickett, Marinette, who had "rented" the car on May 17 and failed to return it. There is a possibility that Prickett will be brought here to face a charge of stealing an automobile.

Prickett was arrested in Green Bay by a detective who was watching for the missing car. Prickett also was wanted, it is said, for forging several checks in Green Bay a few months ago. The check forgery probably will be pressed against him in Green Bay.

According to Mr. Schwab, Prickett had been renting cars from the agency here since May 5, always returning the cars until on May 17. He had a car out on that date and after he was gone a few days he wired from Oconto that he would return the car last Monday but did not keep his word, Mr. Schwab said.

EVERYBODY WEARS RED POPPY TODAY

Legion Auxiliary Raising Funds for Care of Disabled Veterans

Thousands of poppies are being sold in Appleton today by squads of young women who are assisting the Women's auxiliary of Oney Johnston post of the American legion in its annual effort to raise money for care of disabled soldiers. The sale started early in the morning and by noon there scarcely was a person on the streets who was not sporting a red flower. Hundreds of long-stemmed poppies sold to business houses were decorating display windows.

Red poppies were chosen for the annual flower sale because their significance to overseas veterans. The first flowers sold were daisies but they didn't mean anything to the veterans and sales were slow. The poppies, however, recalled memories of Flanders fields where acres and acres of the flowers grew in rank profusion on soil enriched by the blood of thousands of men who had fought over the fields. The red flower was chosen as the official flower of the disabled men and enormous sales are made each year.

Wreaths of poppies will be sold beginning on Monday and it is the hope of the legion and its auxiliary that every home in the city will display wreath in its windows on Memorial day.

Sylvester Stack of Waupaca, spent Saturday in Appleton on business.

THE BUILDER OF A HOME

that our organization offers

The Lumber

which enters into the construction of a home is varied to suit particular requirements. It is brought from far distant regions, that the home which will be yours may be built to stand the ravages of time.

The Millwork

which forms so vital a part of a real home, needs careful consideration. Judiciously selected, artistically designed, properly manufactured, it can bring your home, which otherwise might be commonplace, into a home of character and distinction.

FURNITURE

the most thoughtful gift of all

Give Her the Thoughtful Gift of FURNITURE

"That's The Great Idea"

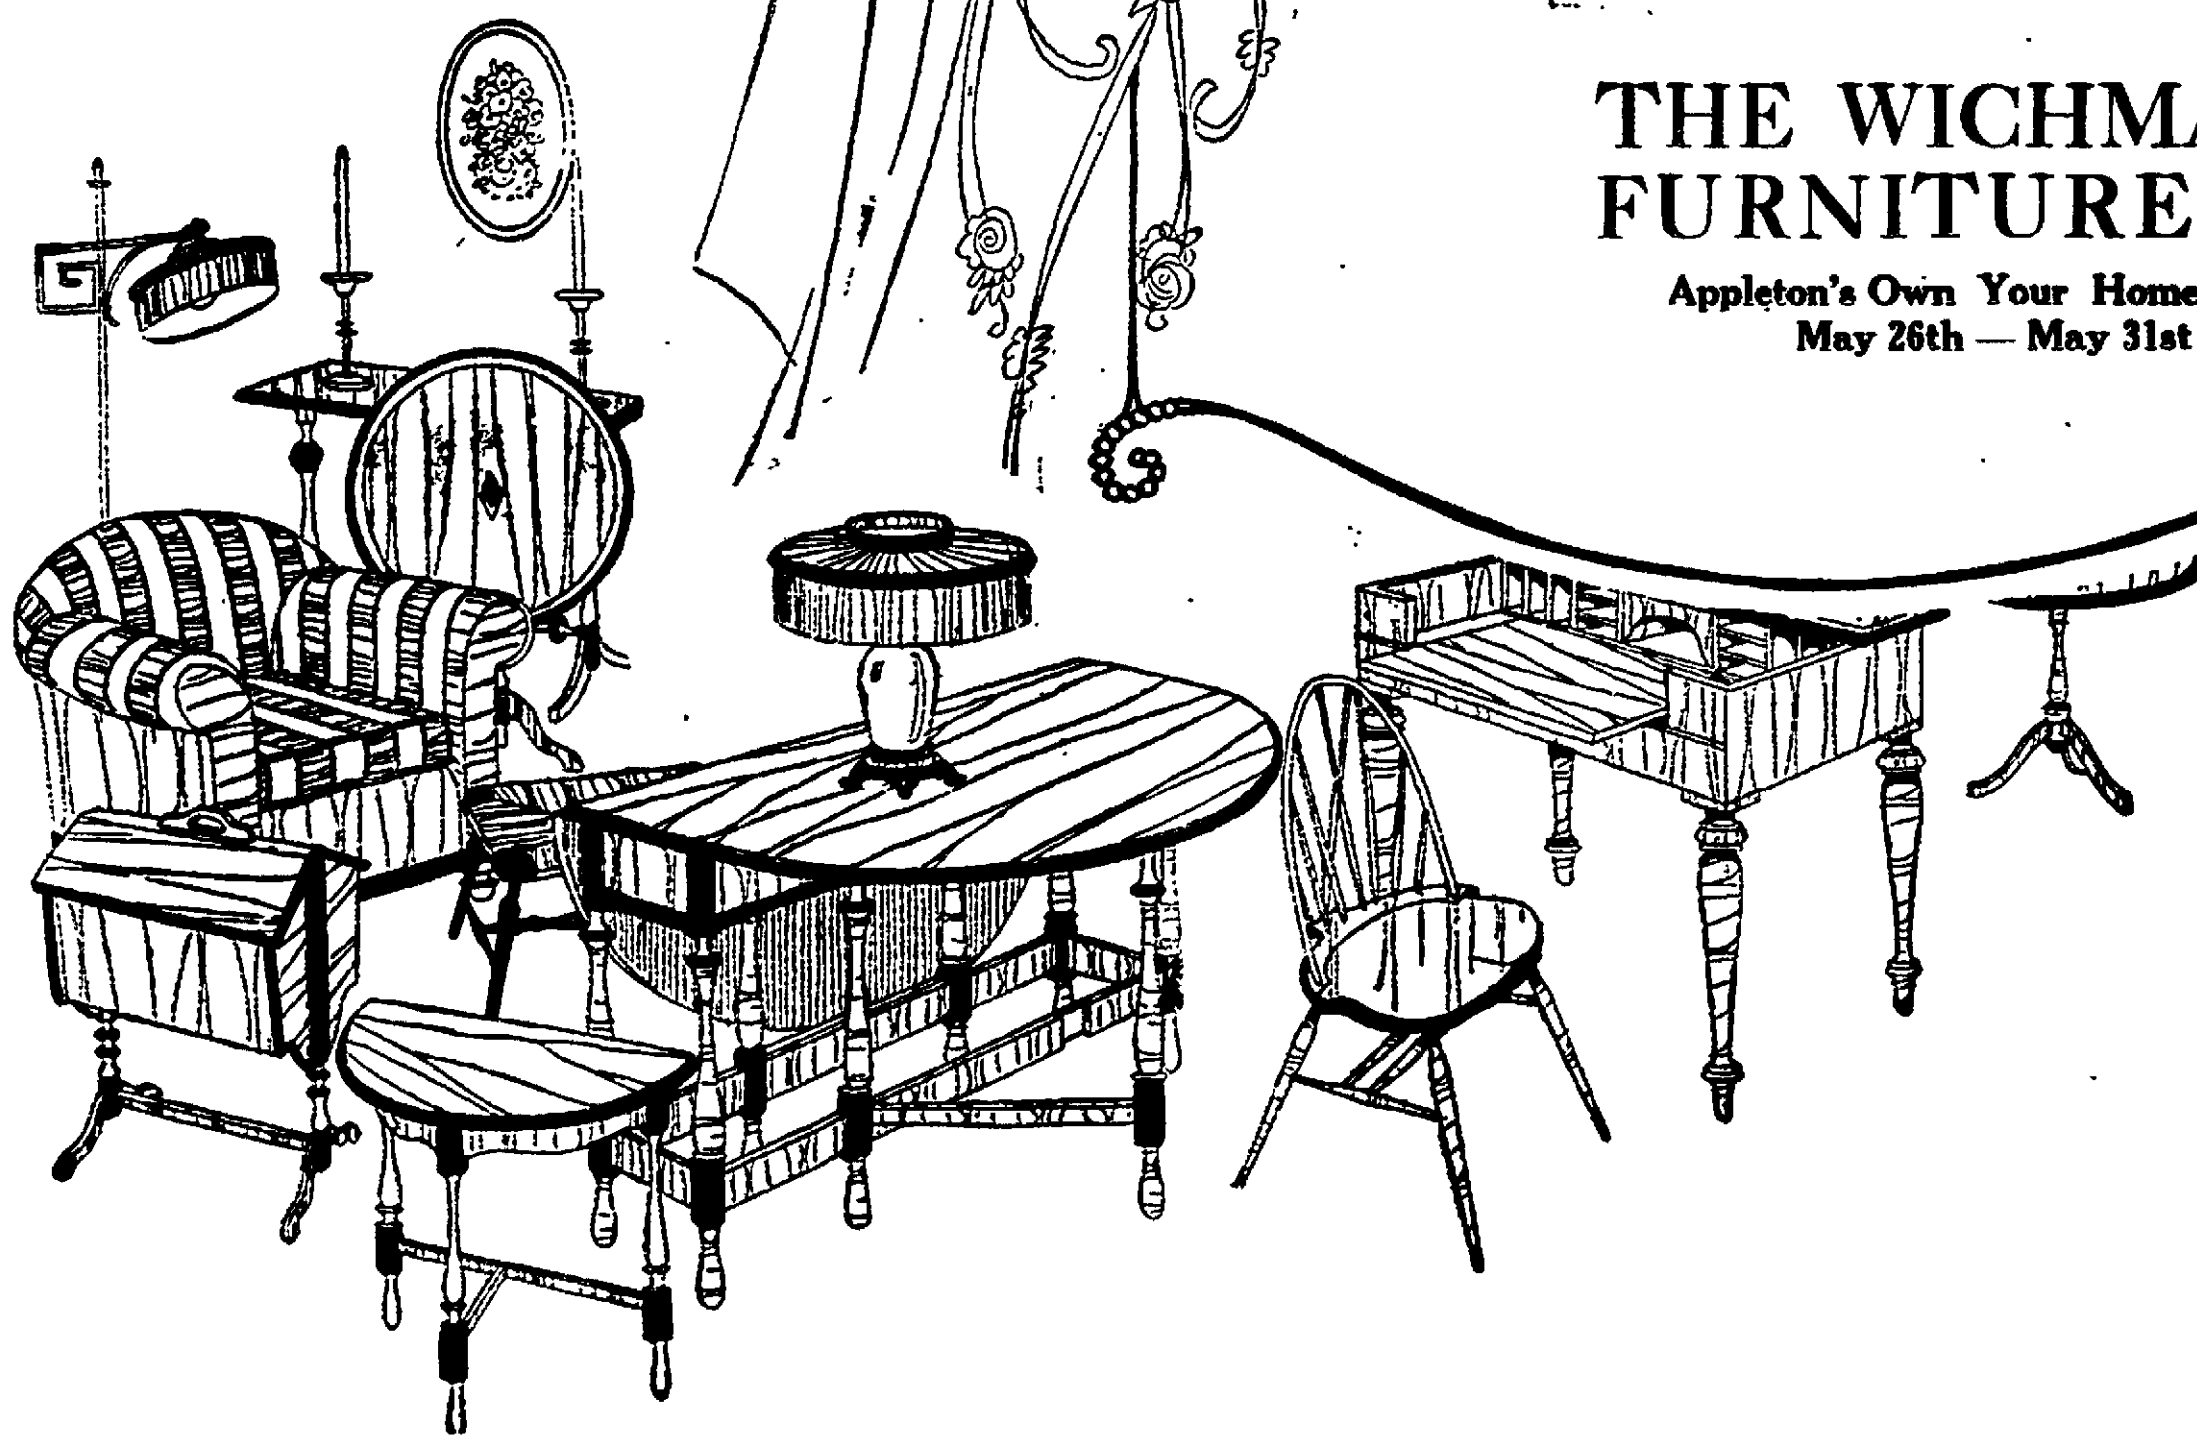

She'll get a lot of useless presents. Every bride does. Cake knives, or silver pieces that don't match, or duplicates that she doesn't know what on earth to do with. Things that show more plainly than words that the giver didn't think very hard.

Prove yourself the thoughtful exception by giving her furniture, for odd pieces are the ones that really make a home. A saunter through our aisles will give you many ideas. Nests of tables, book troughs, comfortable chairs, ferneries, odd tables, lamps, mirrors—what bride would not welcome any one of them?

Come and let us show you what you can get for the money you wish to spend. You will find our collection great in beauty and charm, yet moderate in price.

6 Delegates To District Club Meet

Appleton Women Take Part in Convention Program at Sturgeon Bay

Mrs. S. C. Shannon, president of Appleton Women's club, Mrs. Stephen C. Rosebush, Mrs. B. F. Goodrich, Mrs. Herman Heckert, Miss Inez Gurnee and Mrs. J. L. Johns will represent the women club at the ninth district convention of Wisconsin Federation of Women's clubs from Tuesday to Thursday in the Congregational church at Sturgeon Bay. A number of these women will participate in the program.

Paintings by Francis Scott Bradford and Austin Secker and Mrs. O. P. Fairfield's pottery will be among the exhibits. Mrs. H. J. Ingold is district chairman of art and with Mrs. R. C. Buchanan and Mrs. George Nau of Green Bay has planned an art exhibit, are luncheon and artists colony. Mrs. S. C. Rosebush is to speak at the luncheon. It is doubtful whether Mrs. Ingold will be able to attend.

Mrs. A. G. Meating of Appleton, Chautauque chairman of club work and Miss Inez Gurnee, district chairman of public health, are others who will be present. Mary Marguerite Arens of Lawrence Conservatory of Music will present a program following a lecture by Prof. M. V. O'Shea of Madison Wednesday evening.

Other speakers include Mrs. E. L. Mendelhall of Fond du Lac, Wednesday evening; Mrs. Clinton Barr of Milwaukee, Wednesday evening; Mrs. G. F. Brown of Fond du Lac, Thursday morning; Mrs. Nellie Kedzie Jones of Madison, Thursday morning; Mrs. Gertrude Hasbrouck of Madison, Tuesday evening; Miss Harriet Long of Madison, Thursday morning. Musical features will be included in the program.

PARTIES

The Columbian club will give a supper at Columbia hall Monday evening. It will be followed by a program and social.

Mr. and Mrs. H. L. Dawson and Mr. and Mrs. H. L. Davis entertained members of the Ladies' slipper club and their husbands at dinner at the home of Mr. and Mrs. Davis, 432 Alton-st. Friday night. The dinner was followed by bridge.

The last party given by the Lions dancing club will be Wednesday night in Elk hall, according to announcement received from the club Saturday morning. About 60 couples are expected to attend. Music will be furnished by Vonning's orchestra. Dancing will start about 8 o'clock.

Mrs. Henry L. Meltz, 1117 Morrison-st. entertained 12 friends with a party on her birthday anniversary Friday afternoon. Prizes at dice were won by Mrs. Louise Thela and Mrs. Joseph Treiber.

Miss Helene Belzer entertained a group of friends Thursday evening at her home, 520 Second-ave. The prize at games was won by Mrs. Dorothy Rehenfeldt.

About 35 couples attended the card party and social given by Knights of Columbus for knights and their ladies and friends Friday night in Catholic home. Dancing furnished part of the entertainment. Prizes at bridge were won by Mrs. Joseph Plank and C. J. Quinn and at schafkopf by Mrs. Matt Schmidt and Roger Fitzgerald. Fifteen tables of cards were played.

LODGE NEWS

About 20 couples attended dancing party and social given by Equitable Fraternal union Friday night in South Masonic hall. Old-fashioned square dances and quadrilles were featured.

R. L. Jarvis, E. Maynard and A. J. Kreiss will attend the seventy-eighth annual session of the Grand lodge of Independent Order of Odd Fellows in LaCrosse June 3, 4 and 5. These men represent Konicmic lodge, No. 47, of Appleton.

Arrangements to attend the district meeting at Stockbridge June 7 will be made at a meeting of Konicmic lodge Monday night at 8 o'clock in Odd Fellow hall. There is to be work in the first degree also.

Social Calendar

2:45, Monday Bridge club, Mrs. Henry Marx, 377 State-st.
7:30, Young People society, First English Lutheran church.
9:00, Konicmic lodge, Odd Fellow hall.

MARRIAGE LICENSES

The following two couples applied Saturday for license to marry: Wilhelm Tetzlaff, 6 Appleton, and Hilda Radatz, Route 1, Little Chute; Adam J. Ackermann of Detroit, and Sybil G. Schommer, Appleton.

He Who Hesitates is Lost! The man who dares and does get there—If you don't start you never finish—Make your purchase tomorrow of a Lot in Randall Park on those easy terms.—C. B. Tift, Realtor.

JAIL ATTACHE

Belle Monroe is the latest woman to land in the Cook county jail in Chicago. But there's a difference. She is secretary to Warden Wesley Watsonbrook. She is the first woman to hold such a position in there.

Invite Parents To Awards Court Of Girl Scouts

Girl scouts who will take part in the court of awards at Appleton high school gymnasium are urged to be at the school at 7 o'clock Saturday evening. The ceremony will begin at 7:30. Parents and friends of scouts will be welcome at this program at which the girls receive their ranks and awards for the year.

CLUB MEETINGS

Mrs. Roy McGreger, 567 Walnut-st. entertained the J. L. D. club at her home Thursday evening. Prizes at dice were won by Miss Lottie Leisen and Mrs. Marion Phillips. The next meeting will be Tuesday night at the home of Miss Alma Tuechschner, 832 College-ave.

Daughters of the American Revolution met Friday afternoon with N. P. Mills, 755 Lawrence-st. Mrs. Mills was assisted by Mrs. Vance Edwards. Mrs. Henry Russell gave her report of the continental congress at Washington, D. C., a number of weeks ago. Election of officers will be completed at the next meeting.

The picnic of the Clio club has been indefinitely postponed because of inclement weather. Further announcement will be made when a date has been decided upon.

The Monday Bridge club will meet at 2:45 Monday afternoon with Mrs. Henry Marx, 377 State-st. Cards will be played.

Mrs. E. A. Konz, 502 Oneida-st. was hostess to the Friday Schafkopf club at her home Friday afternoon. Prizes were won by Mrs. William Konrad and Mrs. David Brettschneider.

FORD BARS DRINKING AT IRON MOUNTAIN PLANT

Dennis Meldam has returned from a two weeks' trip to Antigo and Iron Mountain. At the latter place he visited his nephew, Paul Van Oyen, who has charge of the flooring department of Henry Ford's plant which he says employs several thousand men at high wages.

More than 200 homes for employees are being built and are sold to the men on a monthly payment plan. If they fail to meet their obligations or move away the money paid down is returned to them and the house is sold to someone else.

The company's rules are very strict—especially regarding intoxicating liquor. An employee is warned against its use and if he drinks he is discharged. The only way he can get reinstated, if a valuable man to the company, is to begin at the bottom again and work up to his former position.

Health and cleanliness is insisted upon by the company which has inspectors that visit the homes of employees to see they are properly kept. Physicians and nurses are supplied families at the rate of \$1.10 a month per year. No limit is placed on the amount of service.

OSTEOPATHS ATTEND NATIONAL CONFERENCE

Dr. Henry T. Johnson and Dr. Eliza Culbertson will attend the convention of the American Osteopathic association at Kirksville, Mo., which opens May 25 and continues through May 31. The convention city is the home of two osteopathic colleges, the American School of Osteopathy and the A. T. Still College of Osteopathy. Dr. Johnson graduated from the American school in 1909.

The convention will celebrate the fiftieth year of osteopathic treatment. Special tributes will be paid to the founder, Dr. A. T. Still. Among the noted osteopaths who will be at the convention are Dr. Hugh Conklin who has made a study of the effect of fasting in the treatment of epilepsy and Dr. Curtis H. Muncie who recently treated the prince of Spain for catarrhal deafness. The convention program includes an excursion to the Still-Hildreth osteopathic sanitarium where nervous and mental diseases are treated.

Necholson Will Sing 4 Groups In His Recital

The program which George Mecholson, baritone, will sing in recital at 8:20 Monday evening in Peabody hall has been announced. Mr. Mecholson is a pupil of Carl J. Waterman, dean of Lawrence Conservatory of Music. He is to be accompanied by LaVahn Maesch, pianist. The program: "Arm, Arm, Ye Brave"—Judas Macabeanus; "In quiesca tomba"—Beethoven Prologue "Pugilae"—Leoncavallo; "Thou art like a flower"—Liszt; "Love Song"—Brahms; "The Wanderer"—Schubert; "Shepherd See Thy Foaming Horses"—Korby; "Had I Horse"—Korby; "L'Heure Exquise"—Hahn; "Vision Fugitive"—Herodiade; "The Little Clouds"—Logan; "Pretty Creature"—Storee; "Wayfarers Night Song"—Martin; "Invictus"—Huhn.

CHURCH SOCIETIES

The Christian Mothers of St. Mary church will approach communion at 7:30 Sunday morning.

C. Willard Cross, scout leader, will entertain boys scouts of first and second class at a dinner at his home, 674 Rankin-st. Saturday night. These scouts are members of the troop of First Congregational church.

Young People society of First English Lutheran church will meet at 7:30 Monday night in the parish room. This is to be a business meeting.

Young Ladies sodality of St. Joseph church will approach communion at 7 o'clock Sunday morning in St. Joseph church. Members are to meet at St. Joseph hall at 6:45.

An all day meeting of the Women's association of First Congregational church has been scheduled for Tuesday. The women will meet at 10 o'clock in the morning for sewing, followed by a luncheon at 12:15. Mrs. W. H. Hinchliff is chairman of hostesses. In the afternoon a missionary program will be presented.

The picnic planned by the Episcopal students club of Lawrence college for Sunday has been postponed because of poor weather. It probably will be held next Sunday.

William Kraemer and Herbert Schultz led discussion on "Church Membership" at a meeting of Olive Branch society Friday night in the parlors of Mt. Olive Lutheran church. A social hour followed.

Try a Post-Crescent Want Ad

"SUNNY JIM"

The "Sunny Jim" prize, coveted trophy of Bryn Mawr College, has been won by Elizabeth Howe of Fulton, N. Y. The prize is given annually the "outstanding person of the college" and the characteristics considered are personality, cheerfulness, good sportsmanship and fairmindedness.

HANNUM WILL SPEAK ON MISSIONS AND COMMERCE

"Have Business and Commerce Helped or Hindered Missionary Work?" is the subject on which Prof. Robert Hannum of Lawrence college will speak at the meeting of the Evangelical League of Christian Endeavor at Emmanuel Evangelical church Sunday evening. The hour of meeting has been changed from 8:45 to 6:30 because of the address. This meeting will be under the auspices of the missionary committee, with Miss Amanda Franzke as the leader.

Members of the league also plan to hold an outdoor devotional service down river Sunday morning. They will meet at the foot of North-st. at 7 o'clock and hike to some appropriate meeting spot.

ENDEAVORERS WILL HEAR TALK BY DR. MURSELL

Dr. James L. Mursell of Lawrence college will speak at the Christian Endeavor meeting at 6:30 Sunday evening at the First Congregational church. His subject will be "Australia." This will be the monthly missionary meeting of the society and is in charge of the missionary committee. Miss Ruth Dawes, the chairman, will be the leader.

Country Club Holding First Supper Tonight

Riverview Country club will hold the first of its Saturday night suppers of the season at 6:15 Saturday at the clubhouse.

This gathering will be attended by a large number of the members and will be an informal opening of the club. There will be no set program following the supper.

Formal opening of the club has been set for June 7, at which time a dinner will be arranged. Playing on the course already has begun but the club matches will not start for a week or two.

LIONS GO TO CONCLAVE AT GREEN BAY MONDAY

Because the annual state convention of Lions clubs is in Green Bay Monday and Tuesday there will be no meeting of the Appleton club Monday noon. It is expected that half the club will go to Green Bay on Monday. Fond du Lac, Oshkosh and New London clubs will motor to the convention city and the Appleton group will join them when they pass through Appleton.

Sermon Topics

Two Memorial day sermons will be delivered Sunday morning, one at First Methodist church, Appleton, and the other at Presbyterian church, Kimberly. An important event of the day will be the laying of the cornerstone of the new Trinity Evangelical Lutheran church at 3 o'clock in the afternoon. Sermon subjects.

First Methodist—Episcopal—Morning worship, 11 o'clock, Memorial day sermon, "The Defeat of Victory," by the pastor.

First English Lutheran—Morning worship, 10:30, sermon subject "Prayer."

Mount Olive Evangelical Lutheran—Morning worship, 10:30, sermon subject, "When, Where and How to Pray."

First Congregational—Morning worship, 11 o'clock, sermon subject, "The Church of Christ for Peace and Good Will."

Trinity English Evangelical Lutheran—Morning worship, 10:30, sermon subject, "Communion With God." At 3 o'clock in the afternoon the cornerstone of the new edifice will be laid with appropriate ceremonies.

11 GRADUATE FROM SHIOCTON SCHOOL

Eleven pupils were awarded diplomas Friday evening in the graduation exercises of the graded school at Shiocton, of which Miss Ella Dobrient is principal.

The names of the graduates are Edith Palmer, Andrew Vanderhoof, Glen Blyden, Ramona Curtis, Boneta Knorr, Clair Thorpe, Alice Booth, Warren Erwin, Mildred Brantz, Idella Vanderhoof and Eunice Bedor. A. G. Meating, county superintendent of schools, presented the diplomas to the class, and the Rev. N. W. Conkle gave the invocation and benediction. Idella Vanderhoof was salutatorian and Mildred Brantz was valedictorian. Recitations were delivered by all the members of the class, and several songs were sung by girls, by boys and by a joint chorus.

FLAGMAN SHOULD LET THIS FELLOW GET HIT

John Campbell, flagman at College-ave crossing, narrowly escaped being run over by an automobile driver late Thursday afternoon who disobeyed his signal. A freight train had just passed and was closely followed by a gas-oline car loaded with railway employees. Several automobiles lined up while the train was passing and when the flagman insisted on holding them back for the handcar the one nearest the railroad track took a chance of getting across and would have struck the flagman had he not done some quick sidestepping.

LILLIE MOONSHINE CASE GOES ON TRIAL NEXT WEEK

Jurors have been summoned to be on hand Monday for the opening of the case of the State of Wisconsin vs. Henry Lillie who is charged with possession of intoxicating liquor. The defendant pleaded guilty some time ago to the charge of having slot machines in his establishment but will contest the moonshine charge.

C. OF C. HOPES TO GET MORE WORK FROM COMMITTEES

Chairmen Will Be Instructed to Get Committee Together for Dinners

More activity among standing committees and greater interest and attendance on the part of the committees will be the aim of the chamber of commerce this year. This will be accomplished in part by having each committee gather for dinner within the next week and organize and make its year's plans.

Each chairman will be instructed at the meeting of the board of directors next Wednesday to set an immediate date for his committee's dinner. Programs will be submitted to the board after the sessions are held and a general program for the year for both major activities and forum subjects then will be drafted.

The community welfare committee will take charge of the better cities contest of the Wisconsin Conference of Social Work, starting June 1, with the hope of winning the prize of \$1,000 for Appleton. The committee also will continue to do research work, study and planning as a means of helping the common council solve the garbage disposal problem.

Participation in the better cities contest will bring Appleton into the inter-chamber fire waste contest of the Chamber of Commerce of the United States. A large oxidized silver plaque is presented to the city having the best record for low fire losses and absence of fire hazards. Hoboken, N. J., won it last year and the plaque was presented at the recent national convention at Cleveland.

The board also will consider the McNary-Haugen bill now before congress, at its meeting on Wednesday. This measure provides for an export corporation by the government to dispose of surplus farm products. The national chamber is opposed to the measure.

CLUB WILL PROBE AUTO ACCIDENTS

Aggressive Policy Will Be Mapped Out at Safe Drivers Club Meeting

An aggressive policy toward automobile accidents and violations of traffic laws will be mapped out by the Safe Drivers club of Outagamie-co at a meeting next week. Every member will be urged to attend and assist in shaping a safety program.

The club plans to appoint committees to investigate all accidents in which persons are killed or injured, and if there is any indication of recklessness, intoxication, negligence or violation of speed or highway laws to bring the matter to the attention of the proper authorities. Several accidents have occurred of late which should have been investigated thoroughly, the club officials say, and a definite procedure therefore is to be adopted.

Each autoist who joins the club agrees to report names or license numbers of all who violate laws of the municipality or rules of the club. No infractions have been reported to the secretary, Miss Mabel Sibbey, to date and the duty in this respect will be explained at the meeting. Numbers of drivers who are known to have "jumped" arterial signs and members seeing this practice have been instructed to report the license number to the club.

It is believed by the club that police officials of the smaller places in the county as well as Appleton will make a more determined effort to curb reckless driving if the backing of the club is given their action.

APPLETON NOW IS "END OF LINE" FOR WHITE BUS

A change has been made in the operation of The White Swan bus line which has been operating between Green Bay and Stevens Point via Appleton. The bus will run between Appleton and Stevens Point only hereafter. Two trips will be made daily, leaving Stevens Point at 7 a. m. and 2 p. m. on week days and arriving at Appleton at 10:15 and 5:15. The bus will leave Appleton at 10:30 and 5:30 arriving at Stevens Point at 1:45 and 5:45. On Sundays there will be but one trip, leaving Stevens Point at 8 a. m. and arriving at Appleton at 11:15. Returning the bus will leave Appleton at 3 a. m. and arrive at Stevens Point at 6:15. Stops will be made at Greenville, Hortonville, New London, Norton, Weyauwega, Waupun, Sheridan, Amherst, Amherst Junction, Custer, Stockton.

70 Churches Invited To Saengerfest Here

St. Paul Congregation Arranges to Entertain Throng of About 10,000

Seventy congregations within a radius of 50 miles of Appleton have been invited to the Fox River Valley Lutheran saengerfest at Pierce park Sunday, June 1, by St. Paul Lutheran church, which is staging the big annual choral gathering this year.

It is the opinion of Albert Voeckel, chairman of the committee on arrangements, that eight to ten thousand people will be here if the weather is favorable. Most of them will come by automobile.

Each of the committees which is working on the saengerfest has completed its plans and will be prepared to conduct its part of the work when the proper time comes.

The serving of meals at noon and in the evening to the visitors is one of the biggest tasks which the church faces. This will be handled entirely by women of the congregation. A temporary kitchen will be built in the park so the workers will be sheltered. A large number of tables will be erected in the open air. Gas will be used for the cooking. It will be supplied to perhaps a dozen stoves by running pipes above ground from connections on nearby streets. This will enable the women to offer warm food to the visitors.

A large platform will be built for the singers, who will number about 300 from choirs of the valley. Another platform will be built for the Watertown band and two orchestras, which will furnish accompaniment for the chorus and musical entertainment during the day. Seats enough to accommodate the crowds also will be provided.

Present plans are to use the park east of the main driveway as a parking space for automobiles and the west half for the saengerfest and the west half for the saengerfest and the west half for the saengerfest.

The Watertown band, composed of students of Northwestern college, will come here Saturday evening by special train. The musicians will be housed overnight at homes of the various church members.

BALLARD ASPIRES TO SENATE BERTH

Two Outagamie-co men are known to have their hats in the ring for state legislative offices.

C. B. Ballard of Grand Chute, will seek election as state senator for the Fourteenth senatorial district, and Robert T. Carpenter of town of Maine, aspires to the office of assemblyman from the Second district of Outagamie-co. Both are Progressive Republicans.

Mr. Ballard now is state treasury agent under appointment of Gov. John J. Blaine. He previously served three terms as assemblyman from the First district of Outagamie-co during the years 1909-1911, 1915-1917, and 1919-1921.

Mr. Carpenter is chairman of the town of Maine and has served in town and county offices for some time. This is understood to be his first try for a state position.

Plans for Tennis Members of the recreation department of Appleton Women's club who are interested in tennis are beginning to make plans for the summer. They will be able to use the college courts as soon as college closes. Any girls who are interested in playing with the tennis club may sign up at the clubhouse at once.

NEW LAW SURE TO CAUSE CONFUSION

Flagmen stationed at Lake-st crossing between Ashland division depot of the Northwestern Railway company and crossing of the Chicago, Milwaukee & St. Paul Railway company unanimously agree that it would be impossible to enforce an ordinance requiring arterial highway steps to be made at the crossing without tying up traffic completely as many as 600 automobiles an hour pass over the tracks.

William Tierney, who is on duty during the busiest part of the day, suggests instead that the city officials pass an ordinance requiring automobile drivers to heed the signals of flagmen. If this were done there would be very few accidents, he said.

According to Mr. Tierney automobile drivers are becoming more reckless each year. They are willing to take chances with an approaching train and if the flagman blocks the way they drive around him.

STATE IS SENDING MAPS TO OWNERS OF AUTOS

Automobile owners now are receiving copies of the new Wisconsin highway map from the secretary of state's office at Madison, with a booklet containing the laws regulating motor traffic.

A law enacted in 1923 requires that a state map and a copy of the rules

CICERO GRADED SCHOOL HOLDS CLOSING EVENTS

Special to Post-Crescent
Cicero—Commencement exercises at Cicero state graded school, Thursday evening of last week was largely attended. The stage was trimmed in the class colors, pink and green, also a great variety of flowers. The graduates received praise for their part in the exercises by the county superintendent, A. G. Meating, who presented them with their diplomas.

On Friday there was a picnic on the grounds of the school. A large crowd attended. In the afternoon games were played and several races were run.

Miss Ruth Peterson, teacher in the primary room, returned to her home in Allenville Friday evening.

Henry Marks and Richard and Fred Bunkelman, were callers in Green Bay Sunday.

The Misses Joyce and Opal Jensen of Seymour, spent Friday and Saturday with relatives here.

F. C. Ames of Leeman, was a caller in town Tuesday evening.

Mr. and Mrs. William Marks of Brainerd, visited the latter's parents, Mr. and Mrs. Wellington Sherman, here Friday.

Mr. and Mrs. S. S. Colson and son Lester of Green Bay, were callers at the H. E. Spaulding home Sunday.

Splendid Musical Future In Store For Appleton If Child Training Is Kept Up

BY CARL J. WATERMAN
(Dean of Lawrence Conservatory)

From the time the pitch pipe was sounded for the beginning of the Appleton high school chorus of 400 voices, it was very apparent to the audience in Lawrence Memorial chapel Friday evening that public school music in Appleton was being made one of the most intelligent, delightful, appreciated and worthwhile subjects in the schools. One could not help but notice the soft, flute like quality of the children's voices which showed clearly that they had been trained to use them properly. The organ-like smoothness of the tones carried the voices into the ears of every listener. There was no straining or harshness at any time. With such tone quality, Appleton ought to develop many excellent singers in time to come.

"Never do for a child what he can do for himself," and "never assume that a child does not know a thing" was constantly stressed during the program and the initiative of the children was developed far beyond the expectations of the average parent. With such training in rapid thinking these children are being equipped for correct adult vocations. The children worked so rapidly that it was difficult for Dr. Earl Baker who directed the work to keep pace with them. They were told once what to do and they did it. This type of mental training through the study of music certainly ought to help in the teaching of kindred subjects.

LEARN BY NOTE

In the demonstration there were only two places where the children were allowed to work slowly, namely in the beginning of note reading and the beginning of two-part singing. The bridging of the gap between rote and note was cleverly worked out. The children in the first grade learn all of their songs by rote—some 50 or 75 of them. Some of these songs were called pattern songs which were used for the beginning of note reading in the second grade. There were at least two pattern songs for each of the nine major keys. Mr. Baker pointed out why we do not use the "do, re, me" system as it has been discarded along with the old "A, B, C" system of reading prose and poetry. His theories were based on sound psychology and pedagogy, which taught the second grade children how to read music as readily as they read stories from their primer.

During the development of note

reading, there was the same beautiful tone quality, clear enunciation, and good rhythm which was obvious all of the time. If everyone had this opportunity of building so firm and sure a foundation in music reading, we could do many, many more cantatas, oratorios, etc. here in Appleton.

FINE MUSICIANSHIP

The third grade shared with the fifth grade in musicianship and intelligent grasp of the subject. Master Marvin Greene covered himself with glory when he sang "Just Awearying for You." His was only one of many beautiful voices. Two part singing in which the intonation was perfect, and the balance ideal, was demonstrated by the fifth grade from the Fourth district school. This type of part singing gives the children a feeling and love for harmony and it was interesting to notice how the children tuned themselves by sliding their voices up and down until the intonation was perfect.

The audience will not soon forget what Mr. Baker called "The Conservation of Boy Voices." Eight boys from the sixth, seventh and eighth grades of Lincoln, Columbus, Franklin, and Fourth district schools sang beautiful four-part music, namely, first and second tenor and first and second bass. Usually we expect to find boys at this time singing a soprano an octave lower or having musical such was not the case last night for the boys sang with a great deal of feeling and each showed some marked musicianship.

The demonstration started with the testing of boys' voices. Each represented a different part. These boys were tuned. Then they sang "Stars of the Summer Night," with splendid intonation and balance. The program was finished by the singing by this group of boys of such songs as "Friendship" the "Welsh Lullaby," etc.

Appleton should have no trouble in finding many men singers if this kind of training is continued. The Appleton high school chorus of 40 voices with Miss Albert Allgaier, George Mechealson and Bernard Behnken as soloists, Everett Roudabush and Russell Hayton at the piano and six violins helped with the harmonious song, "The Wreck of the Hesperus" in a most dignified way. For no large a group, perhaps the largest group of high school students ever assembled for such an occasion, the rendition was excellent. There was an ideal balance of parts, the attacks

A New Creation by Paige!

The 4-Door Brougham — \$2150

[Standard Open Models Now \$1795]

HERE'S the latest Paige creation—the 4-Door Brougham. Think of an enclosed Paige at less than you must pay for enclosed models of smaller, cheaper cars—\$2150! And what a car! You'll agree its appearance is smarter than any car you've ever seen—with its close-coupled lines and striking finish. The lower half of the body is finished in maroon, contrasting with black fenders and black fine-grain leather finish on the upper rear quarter of the body.

Smartly Finished

Interior finish matches the outside in fineness—gray mohair upholstery; silvered fixtures; silk shades. Equipment includes sun visor; windshield wiper; heater; gasoline gauge and clock on the dash. Door pockets carry travel comforts. In the rear a commodious trunk—leather finished to match the top—for luggage.

There's all the chumminess of a coupe in this smart New Paige with ample room for five—and the convenience of four doors. And such riding comfort—with rear springs more than five feet long, snubbers front and rear, 131-inch wheelbase!

Paige Performance

And remember—this striking Brougham has all the famous performance of the New Paige. For here's the smooth, silent, big 70 h.p. Paige motor—its long-lived performance assured by high-pressure oiling. Drive from two miles an hour in high to as fast as you'll want to go—smoothly and silently. Pass most any cars on the road or up hills.

Steering is easy with the ball-bearing steering spindles in the New Paige. Jerking or stalling is forbidden by the gently engaging Paige clutch. Gear shifting is easy and quiet.

Think of this New Paige 4-Door Brougham with all its smartness of appearance, its comfort, its marvelous performance—at the astonishing price of \$2150! Remember, too, the New Paige is still the same big quality car, improved throughout, that last year sold for hundreds of dollars more. For example, the Paige Phaeton formerly sold for \$2450. The New Paige sells for only \$1795.

Big Plant Lowers Price

Our plant capacity has been increased 300% for this year. Increased production means lowered overhead—savings in purchasing. The hundreds of dollars in lowered cost on each car comes to you in the many improvements of the New Paige—and its low price. See this New Paige 4-Door Brougham. Drive it. Call us for a demonstration at your convenience.

DORT SIX

The Sport Touring Car
\$1245 at Flint

Up Hills On High With Effortless Ease

Every ride in this Dort Sport is one of thrilling enjoyment. Here is a motor that gets away like an arrow from a bow, accelerates from six to sixty with amazing swiftness, runs on and on month after month in the same even way without regulation or attention. And here is a motor car whose rare beauty and charm of line class it among the smartest of sport models. Nothing is wanting in comfort and equipment—even a spare tire is included. It is one of the very few sport models roomy enough for five passengers.

Dort Sixes \$1095 to \$1395, at Flint

SO BIG

By Edna Ferber

(Continued from Our Last Issue)

Pervus drove into the Chicago market very other day. During July and August he sometimes did not have his clothes off for a week. Together he and Jan Steen would load the wagon with the days' garnering. At four he would start on the tedious trip into town. The historic old Haymarket on west Randolph Street had become the stand for market gardeners for miles around Chicago. Here they stationed their wagons in preparation for the next day's selling. The wagons stood, close packed, in triple rows, down both sides of the street, and in the middle of the street. The early comers got the advantageous spots. There was no regular allotment of space. Pervus tried to reach the Haymarket by nine at night. Often he had roads made a day too necessary and he was late. That usually meant bad business next day. The men, for the most part, slept on their wagons, curled up on the wagon-seat or stretched out on the racks. Their horses were stabled and fed in nearby sheds, with more comfort than the men themselves. One could get a room for twenty-five cents in one of the ramshackle rooming houses that faced the street. But the rooms were small, stuffy, none too clean; the beds little more comfortable than the wagons. Besides, twenty-five cents! You got twenty-five cents for half a barrel of tomatoes. You got twenty-five cents for a sack of potatoes. Onions brought twenty-five cents a sack. Cabbages went a hundred heads for two dollars and were five-pounds heads. If you drove home with ten dollars in your pocket it represented a profit of exactly zero. No one did not pay out twenty-five cents for the mere privilege of sleeping in a bed.

One June day, a month or more after their marriage, Selina drove into Chicago with Pervus, an incongruous little figure in her brides' finery perched on the seat of the vegetable wagon piled high with early garden stuff. They had started before four that afternoon, and reached the city at nine, although the roads were still heavy from the late May rains. It was, in a way, their wedding trip, for Selina had not been away from the farm since their marriage. The sun was bright and hot. Selina had an umbrella to shield herself from the heat and looked about her with enjoyment and interest. She chattered, turned her head this way and that, exclaimed, questioned. Sometimes she wished that Pervus would respond more quickly to her mood. A gay, volatile creature, she frisked about him like a friendly bright-eyed terrier about a stolid, ponderous St. Bernard.

As they loitered along now she revealed magnificent plans that had been forming in her imagination during the past few weeks. It had not taken her four weeks—or days—to discover that this great broad-shouldered man who had married her was a kindly creature, tender and good, but lacking any vestige of initiative, of spirit. She marvelled, sometimes, at the memory of his boldness in bidding for her lunch box that evening of the raffle. It seemed incredible now, though he frequently referred to it, wagging his head dolefully and grinning the broadly complacent grin of the conquering male. But he was, after all, a dull fellow, and there was in Selina a dash of fire, of whole-some wickedness, of adventure, that he never quite understood. For her flashes of flame he had a mingled feeling of uneasiness and pride.

In the manner of all young brides, Selina started bravely on to make her husband over. He was handsome, strong, gentle, slow, conservative, morose. She would make him keen, daring, successful, turgid. Now bumping down the Halsted road, she sketched some of her plans in large dashes.

"Pervus, we must paint the house in October, before the frost sets in, and after the summer work is over. White would be nice, with green trim-

nings. Though perhaps white isn't practical. Or maybe green with darker green trimmings. A lovely background for the hollyhocks." (Those that she and Reelf had planted showed no signs of coming up. "Then that west sixteen. We'll drain it.") "Teh, drain," Pervus muttered. "It's clay land. Drain and you have got yet clay. Hard clay soil."

Selina had the answer to that. "I know it. You've got to use tile drainage. And—wait a minute—humus. I know what humus is. It's decayed vegetables. There's always a pile by the side of the barn; and you've been using it on the quick land. All the west sixteen isn't clay. Part of it's muckland. All it needs is draining and manure. With potash, too, and phosphoric acid."

Pervus laughed a great hearty laugh that Selina found surprisingly infuriating. He put one great brown hand patronizingly on her flushed cheek; pinched it gently. "Don't," said Selina, and jerked her head away. It was the first time she had ever resented a caress from him.

Pervus laughed again. "Well, well, well! School teacher is a farmer now, huh? I bet you, Widow Paarlensberg don't know as much as my little farmer about—" he exploded again—"about this, now, potash and—what kind of acid? Tell me little Lina from where did you learn all this about truck farming?"

"Out of a book," Selina said, almost snappishly. "I sent to Chicago for it." "A book! A book!" He slapped his knee. "A vegetable farmer out of a book." "Why not! The man who wrote it knows more about vegetable farming than anybody in all High Prairie. He knows about new ways. You're running the farm just the way your father ran it."

"What was good enough for my father is good enough for me." "It isn't," cried Selina. "It isn't! The book says clay loam is all right for cabbages and beans. It tells you how to do it. It tells you how!" she was like a frantic little fly darting and pecking him on to accelerate the stolid sluggishness of his slow plodding gait.

Having begun, she plunged on. "We ought to have two horses to haul the wagon to market. It would save you hours of time that you could spend on the place. Two horses, and a new wagon, green and red. Like Klaus Pool's."

Pervus stared straight ahead down the road between his horse's ears much as Klaus Pool had done so maddeningly on Selina's first ride on the Halsted road. "Fine talk. Fine talk. Fine talk. Fine talk." "Oh! Selina beat her knee with an impatient fist.

It was the nearest they had ever come to quarrelling. It would seem that Pervus had the best of the argument, for when two years had passed the west sixteen was still a lousy clay mass, and unprofitable; and the old house stared out shabby and paintless, at the dense willows by the roadside.

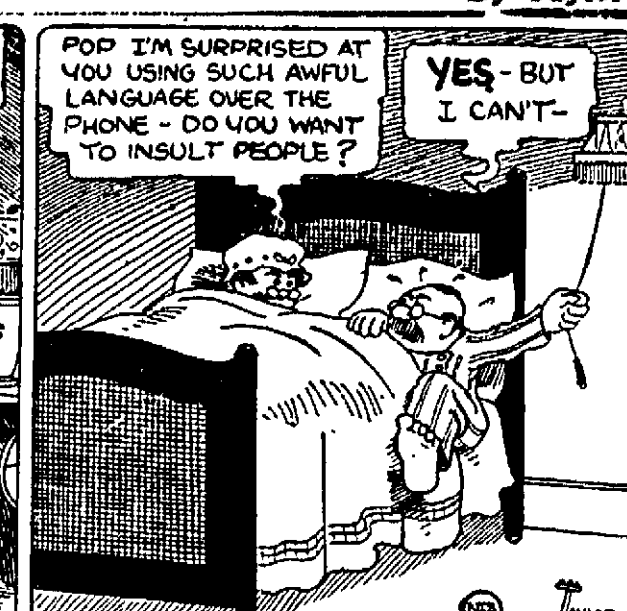

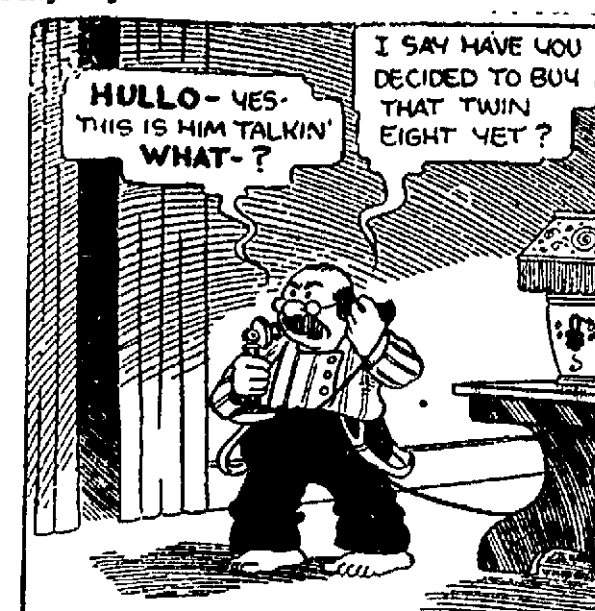

They spent that night in one of the twenty-five-cent rooming houses. Rather, Pervus slept. The woman lay awake, listening to the city noises that had become strange in her ears, staring out in the purple-black silence that was the open air, with that oblong became gray. She went a little, perhaps. But in the morning Pervus might have noted that the fine jawline was set as determinedly as ever with an angle that spelled inevitable paint, drainage, humus, potash, phosphoric acid, and a horse team.

PAPERMAKERS INVADE GREEN BAY SUNDAY

APPLETON CLUB WILL FIGHT TO KEEP TOP RUNG

Neenah-Menasha Team Looks for Easy Victory Over Fond du Lac Redlegs

Appleton will try to make it three straight when the Papermakers invade Green Bay for the third baseball contest of the Wisconsin State League schedule, and have good prospects of keeping their slate clean. The Papermakers are tied with Neenah-Menasha for first place in the McGowan circuit with Sheboygan and Oshkosh trailing on their heels.

The Falls probably will have little difficulty tightening their hold on the lead Sunday, as they play Louis Farris' Redlegs at Fond du Lac, and look for an easy victory.

Green Bay has played but one game in the league this year, which it dropped to Sheboygan when the Chairmakers opened the season in the Bay city. However, since that time the Baymen show considerable improvement. A week ago they humbled the McCoy-Nolan Giants of Milwaukee, who are conceded to be one of the strongest Negro teams in this part of the country.

HOWARD WILL PITCH
Eddie Stack will have a stronger rival in Earl Howard than he has met hitherto in Gertz and Klister of Kaukauna and Jones of Fond du Lac. The Baymen are veterans and heavy on the stack, so Stack will be called upon to display all his wares for the first time since he signed with the Appleton club.

"Shorty" Wenzel who has left the team will be replaced by Babbinas of Milwaukee who last week did his stuff without a falter. Len Smith who was unable to run bases because of an injured knee has improved greatly and will be back at his post in right field at Green Bay. The rest of the Appleton lineup will be unchanged, unless Miller and Gosha are sent in for tryouts.

LAWRENCE SENDS MEN TO CARNIVAL

Twelve Blue Track and Fieldmen Leave for State Meet in Ripon

Twelve Lawrence track and field stars Friday night left for Ripon, where they will engage athletes of Ripon, Beloit, with the latter school favored to win. However, Lawrence expects to pile up a number of points on second and third places, and it may be that the Beloit collegians will be forced from the top position which they have held for three years by the combined efforts of Ripon and Lawrence. Carroll is an unknown quantity in the carnival.

ROD AND REEL

M. J. V. FOSE

BACKLASHES
Improper thumbing of the outgoing line; even laying of the line while retrieving; the line itself, and lastly the novice's desire to cast too far at the start are the causes of most backlashes.

"When learning the bait testing stunt one can save a great amount of one's vocabulary of 'cuss words' and time by starting right and eliminating the 'birdsnesses'."

Thumbing the line properly as it leaves the spool when making the cast will eliminate one fourth of the trouble. Therefore do not raise the right thumb entirely from the spool because the bait starts out with quite a bit of speed which usually will cause it to spin unless properly thumbed. The spinning unwinds the line very quickly causing the windings to loosen from the spool and these little loops become entangled with one another and weave what is commonly called the "backlash" which tie the line in such a way that it cannot proceed farther and usually lands with a puff in the water.

Retrieving the line in such a manner as it is evenly wound on the spool will aid materially in making the cast and should be watched carefully when he bait is retrieved. This will cut down another fourth.

GOOD LINE ESSENTIAL
Purchasing line of hard twisted silk that are so stiff they will hardly loop the reel, and without tension should be avoided, as this sort of line can cause an angler any amount of untold misery while on the "happy fishing waters." Use a soft braided silk line at all times if you want to cast your best and reel the little "finx."

"The watch me 'shoot 'er' clean across the lake 'beginner' ends up with the backlash again, and usually lands within 10 to 15 feet from the bank. Pulling the 'strong arm' at the beginning is 'all wrong' and should be avoided. Don't try to outdistance an 'old timer' when learning the game because it is the one mistake that all beginners make. Some novices think that they can 'without experience'—cast to the far end of the lake and usually make a 'swipe' with so much force that one would think they were trying to throw the rod, reel and the whole works into the stream, and when making this 'awful' attempt forget all about that little 'thumb work'.

St. Mary Track Team Takes High Honors At Depere Carnival

Robert Roemer of Winning Aggregation Is Awarded \$350 Scholarship at St. Norbert College.

St. Mary school won first honors at the parochial school track meet at St. Norbert's college at Depere Thursday and also the scholarship of St. Norbert college valued at \$350 which was awarded to Robert Roemer, son of Mr. and Mrs. Norbert Roemer.

The team made a total of 30 points. St. Joseph school won third place with a total of 16 points. Second place was won by Stevens Point school which scored 26 points. The highest individual score, 21 points, was made by Moran of Stevens Point. Roemer of St. Mary school was second with 13 points, and Beck of St. Joseph school third with 9 points.

ST. JOSEPH STARS PLACE
Roemer of St. Mary school won first in the 75-yard dash. Beck of St. Joseph school won first in shotput, second in low hurdles and third in javelin throw.

Liese, Forester, London and Roemer of St. Mary school won first in the one-half mile relay; Moran, Parker, Liese and Forester won second in quarter mile relay; London second in broad jump, and Forester third in 220-yard dash.

LaFond, Beck, Heinritz and Triebler of St. Joseph school won first in the 220-yard shuttle relay and LaFond third in the 880-yard dash.

St. Mary school team was composed of Robert Roemer, J. Kerrigan, G. Mignon, H. Crab, R. Parker, E. Liese, A. Forester, H. Chaffee, C. London, R. VanRyzin and T. Butler. St. Joseph school team consisted of E. Becker, G. Beck, F. Girard, J. Heinritz, J. Stibel, W. LaFond, C. Schaefer, G. Freibler, R. Rechner, A. Gage.

The meet was put on by St. Norbert college and included the eighth grade pupils of the parochial schools of the Green Bay diocese. Nearly 250 pupils participated in it.

WILLS-MADDEN GO PUT OFF TEN DAYS

New York—The Harry Wills-Barney Madden heavyweight match, storm center of a rowdiness controversy between promoters of the Queensboro A. C. and the fire department over the approval of the Queensboro stadium, was crased on Friday from the boxing calendar for New York state for at least ten days.

This was announced by the state athletic commission after information from Queensboro officials that they would be unable to stage the match next Monday since efforts to lift the fire department's ban on the arena had failed.

The promoters also had considered transferring the match to Newark, but it was understood this has been definitely abandoned.

MARKSMEN WILL VISIT WAUPACA

Waupaca Gun club has scheduled a registered shoot for Sunday, May 31, at Waupaca, and a number of Appleton marksmen are planning to enter the meet. It will be held at the A. M. Penney shooting park and will start at 10 A. M.

There will be four events of 25 single targets each and one of 25 pairs. Total entrance fees will be \$10.25 including the registration charge, and the five-monies percentage system will govern the award of prizes. Amateur Transhooting association rules will prevail and professionals will be permitted to shoot for targets only.

Third Base Is Weak Point On Many Lineups

New York—Third base is a problem for three of the four eastern teams in the American league. The New York Yankees with Joe Dugan at third is the only club in the Atlantic coast section that is well fortified at the difficult corner. At Washington, Frothe hits well but is slow in the field. Bluege, his rival for the job, is a good fielder but weak hitter.

The Boston Red Sox are simply experimenting. Manager Fohl secured Ezzel in a trade with St. Louis. Fohl hopes he will show enough to win the job.

GRIFFITH WILL JUDGE AT BELOIT

Beloit—When Beloit college enters the fourth annual midwest conference track and field meet here on May 31 the ten college members are expected to be represented by over 200 entries. Maj. John L. Griffith, Big Ten commissioner and a graduate of Beloit in 1902, has been selected to officiate for the meet, while Charles Slobodman of Chicago university will act as starter.

Coach Mills of Beloit has recently been informed that the winners of the various events in the midwest meet will be eligible for the olympic trials at Boston June 13 and 14.

Beloit and Carleton, joint winners of last year's meet, are again expected to be among the high point winners. Monmouth, Knox and Ripon will also be strong, while Coe, Cornell, Lawrence, Hamline and Millikin will split the points in many of the events. Trials in the 440 are scheduled for Friday afternoon, May 30.

THE hot summer days have their compensation. They at least silence the bird who boasts of taking an ice-cold plunge every morning.

A Boston checker player had to re-tire from the national tournament because of exhaustion. Possibly he hadn't done enough road work.

Greece is sending a one-armed relic to this contest, as if there weren't enough one-armed relics among the big league pitchers already.

A Cleveland golfer was killed by lightning the other day and the tragedy would have been much more terrible if he hadn't been going so badly at the time.

Connie Mack never dreamed that his remodeled Athletic machine would turn out to be a submarine.

Give the American boy some credit for discrimination; he never picks out a wrestler or a six-day bike racer for his idol.

Speaking of politics, Mr. Hiram Johnson reminds us of the pitcher who had a lot of stuff but couldn't get the ball over the plate.

Babe Ruth is going to be a farmer when he quits the game. Well, none of the pitchers have been able to make a lick out of him yet.

It is said that Young Stripling learned to fight by watching the movies. And yet we have never seen him throw a curd pie.

Run everything out is a baseball preachment. Unfortunately this doesn't apply to the noisy goof who leaps up in front of you at the very moment the star steals home with the winning run.

OLYMPIC SKULLERS RACE FOR TROPHY

By Associated Press Philadelphia, Pa.—Two of America's candidates for Olympic sculling honors, W. E. Garrett Gilmore and Paul Costello, both of this city, will compete late Saturday for the Philadelphia gold challenge cup emblematic of the world's single scull championship. The race will be over the national mile and a quarter course on the Schuylkill river.

Walter H. Hoover of Duluth was also a challenger for the trophy but held by Gilmore, but he withdrew a few days ago because ill health had interfered with his workouts. Hoover has been in this city several weeks practicing for the Olympic trials in June.

Bull Durham's Oshkosh State league aggregation Saturday afternoon was scheduled to lock horns with the Six Nations Indian team in an exhibition contest at the Oshkosh fair grounds. The Oshkosh men Sunday defeated Kaukauna, 6 to 2, and are going good. However, the Six Nations have a strong team and were looking forward to a hardwon but sure victory.

EAST FACES HARD BATTLE WITH AGES FROM WEST COAST

Critics Predict California and Stanford Will Fight for Crown

Boston — Preparatory maneuvers of eastern colleges are not touched with the warm purple glow of optimism as the date approaches for the annual championships in the Harvard stadium May 30 and 31.

So far the east has shown little in the way of aggregate strength that promises to worry the formidable teams which will come up from the Pacific slope.

At the present writing many critics are predicting that the two western universities—California and Stanford—will fight it out for the championship.

YALE LOOKS STRONG
Yale alone seems to stand a real chance to score heavily at the expense of the Golden Bears and the Palo Altoans. The Blue athletes performed impressively in winning a recent dual meet with Princeton.

Bayes Norton gave two fine performances in the sprints, the quarter miler, Chapman, Gage and Gellfuss, continued their triumphant stride and will command a broad jump of 23 feet 7 1/2 inches in the mud was nothing short of remarkable.

Liddle Bench heaved the javelin 175 feet and Syd Scholp was right around 12 feet in the pole vault. Mal Douglas did the mile in 4:30, which was more than creditable considering the conditions.

A summary of these performances would yield Yale approximately 25 points in the intercollegiate games, and that's enough to be dangerous anyhow.

HILLS IS OUT OF LUCK

Princeton showed a star in George Scattergood, a fine low hurdler who may win in the stadium carnival. Ralph Hills would have to be considered in the shotput if it wasn't for Glen Hartrant, the Stanford marvel, who is conceded first place in this event. Gates in the hammer throw is the only other Princetonian who shines up.

Connecticut has a poorly balanced team, and has already been beaten by Cornell. The Quakers' main hopes are Hill in the sprints, Rose in the broad jump and Owen in the pole vault.

Cornell's outstanding star is Ed Kirby, a mile runner who won the event last year in the splendid time of 4:17 1/2.

Harvard can not be counted on strongly as shown Saturday when the Crimson went down to decisive defeat before Princeton. Harvard placed three winners in Walters, half mile, Tibbets, two mile and Carpenter, discus. Walters is probably the star of the three.

WET COURSE HOLDS UP GOLF OPENING

Fans Try a Few Rounds But Are Discouraged by Flooded Grounds

Golf bugs of the Riverview Country club are getting off to a late start this year. The course is soggy and swamplike owing to recent heavy and persistent rains, and the work of putting it into condition has been delayed. Several rabid fans have been out for a bit of practice, but the official opening probably will be staged until the latter part of next week. Jack Robb, new professional of the Riverview club who succeeds Guya Bowen this year, is looking forward to a busy season as the game promises to be highly popular as soon as weather conditions permit play to begin.

The year's schedule is in the process of formation and a number of local and outside tournaments will keep the devotees occupied. The program is expected to be completed and ready for publication Tuesday or Wednesday of next week.

ROLLIE WILLIAMS WILL COACH IOWANS

Madison—"Rollie" Williams, nine letter man at the University of Wisconsin and director of athletics at Millikin university, Decatur, Ill., last year, on Thursday confirmed official reports that he had been named coach of the Iowa team. Williams said he was around from Iowa City last week but did not know of the appointment. He will coach freshmen in football, basketball and baseball.

Jersey Star

CLARENCE PLATT
Announcement has been made that Clarence Platt of Bridgeton, champion shot of New Jersey, has been named to compete with the Americans in the Olympic trap shooting events in Paris.

Spalla Hurls Defi At U.S. Ring Champs

By Associated Press Newark, N. J.—A challenge to fight Jack Dempsey within 30 days or another heavyweight who is considered a contender for Dempsey's crown, was made by Ermindo Spalla, heavyweight champion of Europe, in a telegram Friday to Nick Kline and Babe Culnan, manager and promoter respectively.

Spalla's message was sent from the steamer American Legion on which he is expected to arrive in New York on Monday from South America. On March 7, Spalla was knocked out by Luis Firpo of the Argentine after he had battled through 13 rounds. Spalla has fought in this country previously under Kline's management.

AMATEUR GOLFER AGAIN WILL BE OPEN DEFENDER

Bobby Jones Is Fourth Simon Pure Player to Wear Tourney Laurels

For the fourth time in the history of the event an amateur will be the defending champion in the open golf jubilee at Detroit next month.

Francis Ouimet was the first amateur to win the American open. The Boston boy won in 1913 after a playoff with Vardon and Ray, noted Britishers, who had tied with the caddy graduate the day before with 304.

Ouimet shot a brilliant 72 to win, easily outstriking his more mature opponents, Vardon with a 77 and Ray with a 78. As the defending champion the following year Ouimet was fourth with 298, and second among the amateurs, Chick Evans finishing with 291, a stroke behind Hagen, the winner.

The second amateur to win the open was Jorry Travers who came through in 1915, winning by a stroke from Tom McNamara. The Upper Mountclair player was only casually interested in the defense of his title and it moved over to another amateur, Chick Evans of Chicago.

Evans made history in that event with four rounds of 70, 69, 74 and 73, for a total of 282, the lowest figure by which the open championship has ever been won in America.

There were no championships during the war years and when competitive play was resumed in 1919 Evans, as defender, led the amateurs, but was ninth on the list from the top. Hagen, for the second time was the victor, winning after a playoff with Mike Brady.

Now comes Bobby Jones as the fourth amateur to defend the open title. The Atlanta star has somewhat of an edge on his predecessors in that he does not have to qualify. That relieves him of a bit of mental concern and saves his energy.

The traditions of the game and Jones' reputation. No player has remained in the open since 1912 when Johnny McDermott scored his second consecutive win.

Nevertheless Jones is as good a bet as any individual in the field. There is no better medal play golfer in the world, he has the stamina to go the route and the courage to master any kind of a crisis. You don't need much more.

Do you know Baseball?

by Billy Evans

QUESTIONS
1. How must the batsman turn after overrunning first base, in order not to make himself liable to be put out—H. M.
2. Runner on first base, batsman singles to right and runner on first tries for third. Fielder hits runner on the head with the ball, knocking him down, the ball falling dead nearby. Third baseman recovers ball and touches runner who gets to his feet and tries for third but fails by a narrow margin. Is he out?—L. S.
3. Bases filled. Coach at third yells that the cover is torn and requests pitcher to throw the ball to him. Pitcher obliges and a catcher steps aside and lets the ball go to the stand. Two men score on the play. What is the proper decision?—L. S.

ANSWERS
1. The batsman can turn either to the right or left after reaching first and not be liable to be put out, provided he make no attempt to go to second.
2. Runner was out at third, as the ball is in play and no consideration can be given the accident that knocked the runner down momentarily.
3. This is a trick of 1776 vintage. The pitcher was at fault and runners could score. In the major leagues when such a request is made, the umpire always calls time and looks into the matter of the detached ball.

HAGEN WILL TRAIN FOR AMERICAN OPEN JOUSTS

Walter Hagen is going to make a determined effort to win the open, championship of America this summer. The event will be held over the Oakland Hills course in the Detroit district, and Hagen plans to spend three weeks there practicing.

WISCONSIN FRESHMEN CHOOSE DIAMOND CHIEF

Madison — Edward Donagan of Janesville, has been selected by the University of Wisconsin as captain of the baseball squad as captain of the team. The fresh captain is a holder of considerable promise, in the opinion of coaches. He has shown up consistently as a batter it is said.

Sioux City, Ia.—North Center intercollegiate conference track championships will be decided here Saturday with six schools competing.

Cleveland, O.—Dave Shade, California welterweight, won the referees' decision over Morris Schlaifer, Omaha, in 12 rounds.

Walter Johnson Holds White Sox To One Hit For Washington Win

Babe Ruth Makes Tenth Homerun of Year with One on and Later Scores Winning Run in Ninth.

Walter Johnson in his eighteenth season held the White Sox to one hit, struck out 14 men and allowed only one base on balls as Washington beat the White Sox, 4 to 0.

Ty Cobb, the Georgia Peach" of 20 years ago, ran his hit total to 3,402 by making four, picked a Ruthless bid for a homer off the centerfield bleachers and infused his aggressive personality into the game to an extent which affected even the base worlds' champions who awoke to late inning rallies which beat the Tiger, 7 to 6, after Bush and Jones had resigned to Shawkey the task of silencing the roar of jungle fans.

Babe Ruth made his tenth homerun of the year in the fifth, with a man on and later scored the winning run after singling in the ninth. For Dugan hit a homer inside the park, and the Mayfield brothers who played with Appleton last year but went to the Menasha Riverwolves at the beginning of the 1924 season, have returned to the old team. John will take his old post in rightfield, while Joe will relieve Brautgam in the box on occasion. Ashman will catch. The contest will be called promptly at 2:45 P. M.

Sack Wheat of the Brooklyn Dodgers celebrated his thirty-sixth birthday at Pittsburg by hitting his fifth homerun of the year in the 3 to 1 victory in which aged Burleigh Grimes held the Pirates to six hits.

Hugh McQuillan of the Giants contributed his second victory in two starts when the Reds exploded under Carl Mays in the ninth inning and turned a pitching duel into an 8 to 3 Giant win.

Roy Meeker, a rookie of the Athletics enabled his team to perform the conscientious duty of a trailer by holding the challenging Browns to three scratch hits and shutting them out, 3 to 0.

McQuillan's victory regained the National league leadership for the Giants as Chicago and Boston were prevented from playing by rain which also cancelled the Philly-Cardinal game. Grimes pitched Brooklyn to third place as the Reds dropped to fourth. In the American, St. Louis lost a full game to the Yankees and Red Sox in the three-cornered race.

Lloyd Toomey, big right hand collegian pitcher from the University of California reported to Manager Eddie Collins of the White Sox at Washington and may get a chance to work in the series against the Senators. Toomey who is of the class of 1925 played with Fresno, California Twilight league club.

Warren "Curley" Ogden, pitcher of the Athletics, was claimed via the waiver route by Washington and will report to Manager Harris Saturday. Ogden is a right hander.

ITALIAN CHAMP FAKES CLAIM TO MOORE K. O.

Advance publicity, heralding the American approach of Bruno Frattini, Italian middleweight champion, claims a 15-round draw with Ted Moore, English middleweight, now in this country. This is false. Moore knocked Frattini out.

Lincoln, Neb.—Athletes of 13 schools of Missouri conference were to contest for the Valley track and field championships here Saturday afternoon at the Memorial stadium, University of Nebraska.

WHOLE COUNTRY CAN LISTEN IN ON G. O. P. CONCLAVE

At Least a Dozen Stations Will
Broadcast Proceedings at
Cleveland

Cleveland, O. — Twelve broadcast-
ing stations scattered over the east
and middle west of the United States
will broadcast the Republican conven-
tion from Cleveland, beginning June
10, and at least one more will pick
up a broadcast and hurl it out to the
coast.

This is the program, almost ad-
apted, by which the people of Ameri-
ca will be in constant touch with the
delegates at the Republican conven-
tion here listening to speeches, yells
and applause, to all the noises and
hubbub that accompanies a politi-
cal gathering of this kind.

The committee in charge of broad-
casting is lining up stations in the
following cities:

Providence, New York, Washing-
ton, Buffalo, Pittsburgh, Cleveland,
Chicago, St. Louis, Omaha, Kansas
City, Dallas and Atlanta.

CONNECTED BY LINE

The plan is to connect the stations
in these cities by telephone wires di-
rect from the convention hall here.
Microphones will pick up the
speeches, the shouting, the hand-
clapping and all, transmit them by
wire to the stations all at the same
time, to be broadcast almost the
same moment throughout the United
States.

For farther west, the Westing-
house company is planning to re-
broadcast the convention proceed-
ings from KEFX at Hastings, Neb.,
so that the whole coast may not miss
the "big doings."

Since station KDKA at East Pitts-
burg, Pa., will be one of the 12 get-
ting direct service from Cleveland,
it is planned to pick this up and
transmit it to KEFX on a short
wave, while it will be broadcast at
the same time on the higher broad-
casting wave.

In Cleveland, stations WTAM,
WJAX and WHK will pick up every
bit of the proceedings in shifts, so
that nothing of the convention will
be passed up. The same arrangement
may be tried in the other cities,
where there are two or more stations.

FOR OUTSIDERS

At the same time arrangement
is being made for the installation of
public address systems outside the
convention hall and at points in the
broadcasting cities where overflow
crowds might be accommodated.

The crowd around the convention
hall will be able to hear everything
going on through the installation of
a highly powerful loud speaker ar-
rangement of the kind used when
Lloyd George spoke here a few
months ago. The system itself will
become the property of Cleveland,
for use during other affairs at the
auditorium.

At the same time three of Cleve-
land's newspapers will install similar
systems for their own crowds. As
these are situated within a few
blocks of the convention hall, the
whole downtown area may resound
with G. O. P. yells.

Engineers of the American Tele-
phone & Telegraph Company and the
Western Electric Company believe
the same broadcasting stations and
the same system will be used for
transmitting the doings of the Dem-
ocratic convention in New York, be-
ginning June 24.

This "New" Set Is Easy To Make And Easier To Operate

BY M. J. V. POSE

This is a "new" circuit which has
just been perfected by the Erla Re-
search Laboratories and is given out
to those who "make their own." It
is not a manufactured set. The cir-
cuit can be accurately logged on the
dials and its selectivity is excellent.
In fact as good or better than any
circuit yet devised with the possible
exception of the "super-het."

THIS NEW TUNING DEVICE

The new circuit is a development
and refinement of the Erla three tube
super reflex, and uses the newly per-
fected device known as the selecto-
former which does away with the
varicouper, switches, taps, etc.,
which have always been puzzling to
the person operating a set. The se-
lectoformer requires no adjustment
and has for its main object the
coupling of the aerial to receive with-
out broadening the signals.

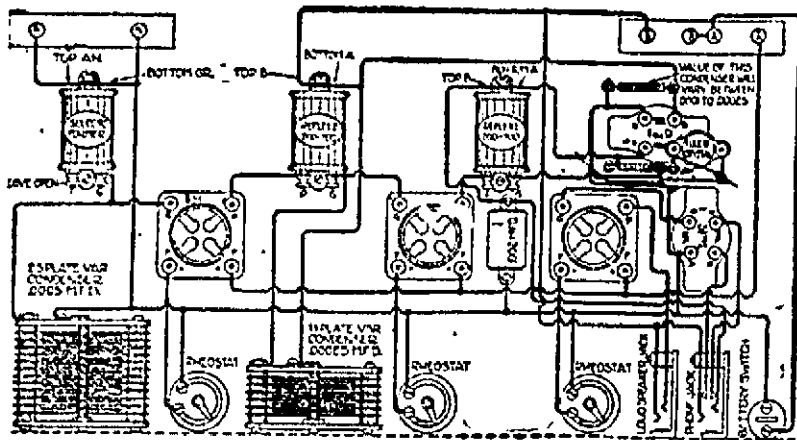

The Selectoformer is of peculiar
design and reduces apparent resist-
ance of the secondary circuit and in-
creases signal volume.

In addition to the novel tuning of
the selectoformer, this new circuit
contains one stage of straight tuned
radio and one stage of reflexed radio
and audio frequency and one stage
of straight audio frequency ampli-
fication. A crystal detector of the fixed
Erla type takes place of the detector
tube, giving clearer reception and
when used in this circuit, is more
sensitive than a tube detector and
without the latter's well known in-
herent defects.

Great care must be used in selec-
tion of parts as some parts will not
synchronize in this circuit and the
parts listed below are necessary to
get the full value of the circuit.

The fixed condensers recommended
in this circuit should also be selected
with great care as to their capacity.
The "tested copper" and "tested mica"
are not a guarantee of "tested capac-
ity."

Tests show that for this circuit the
well known and efficient UV 201A
and C301A tubes are the best and
these require 25 ohm rheostats.
Lower efficiency or a portable set
can use the UV 189 and C289 tubes,
these require 30 ohm rheostats. The
Wd 11 and Wd 12 tubes are not rec-
ommended for this circuit. In this
circuit the first and third rheostats
need scarcely be touched during the
period of operation, but the second
rheostat is more critical and a Brad-

NEW ERLA SUPER REFLEX

leystat or some other fine tuning de-
vice is recommended.

The voltage of the plate varies
from 90 to 135 volts for the best re-
sults. This is due largely to the char-
acteristics of the low amperage tubes
used.

The antenna should be from 60 to
100 feet, single wire, well insulated
at its ends. If one has too long an
antenna and does not wish to take
part of it down a fixed condenser of
.00035, .00025 or .0001 in the lead-in
wire will make it work satisfactorily
with this circuit.

The parts used are as follows:

One Selectoformer
Two Bakelite dials
Three rheostats or bradleystats.
One 25 plate variable Walnart con-
denser (.0005 mfd.)
One 11 plate variable Walnart con-
denser (.00025 mfd.)
One single circuit jack.
One double circuit jack.
Three tube sockets (Bakelite pre-
ferred).

One Erla reflex transformer No. 1.
One Erla reflex transformer No. 2.
One Erla 6 to 1 Audio transformer.
One Erla 3 1/2 to 1 audio transfor-
mer.

One Erla reflex crystal rectifier.
Three fixed condensers of .001, .002
and .00025 mfd.

One Panel 15x1x3-16.
Six binding posts.
25 feet tinned copper bus bar wire
or No. 14 copper wire.

This circuit is very easily assem-
bled and more easy to operate there
being an entire absence of body cap-
acity and, for the benefit of your
neighbors, no irradiation. After a
station is once logged and the num-
bers of the two dials fotted down on
your chart, you can return to this
station practically at will.

Tuning is done by adjusting the
two variable condensers. The 23
plate tunes the selectoformer and
input circuit, while the 11 plate tunes
and radio frequency amplifier. These
two adjustments should be about the
same positions on the dial and care
should be exercised to keep them
somewhat in step when tuning.

Turn the dials very slowly when
tuning or stations will be missed. A
little practice will make you perfect
in tuning this circuit.

If a howl is encountered it may be
due to low A or B. Batteries, rheo-
stats turned too low, or the use of
too large a by-pass condenser where
the .00025 mfd. condenser is indicated
in the circuit. Changing to a .0001
or a .00015 will improve this condi-
tion, but too low a value will lessen
the distant signals.

The Installation of an Oil Burner

in order to give satisfactory results is a problem
for a heating engineer. Trouble will result if
sales alone are allowed to become the leading
object. We sell the Oil-O-Matic backed by our
guarantee and thirty-five years of experience in
the heating business.

urday night show. WLAG 17, Minn.

Why it's True Blue

THE Oakland Six is true blue because it was designed with one
very definite purpose in mind—to make it the finest light six
in its class. Take Oakland closed cars for example. Here are real
automobiles. They are true blue because their distinctive Fisher-
built bodies are real closed car bodies—with no makeshifts nor
compromises entering into their construction or appointments.

Oakland's Six-Cylinder Smoothness Means Greater Closed-Car Comfort

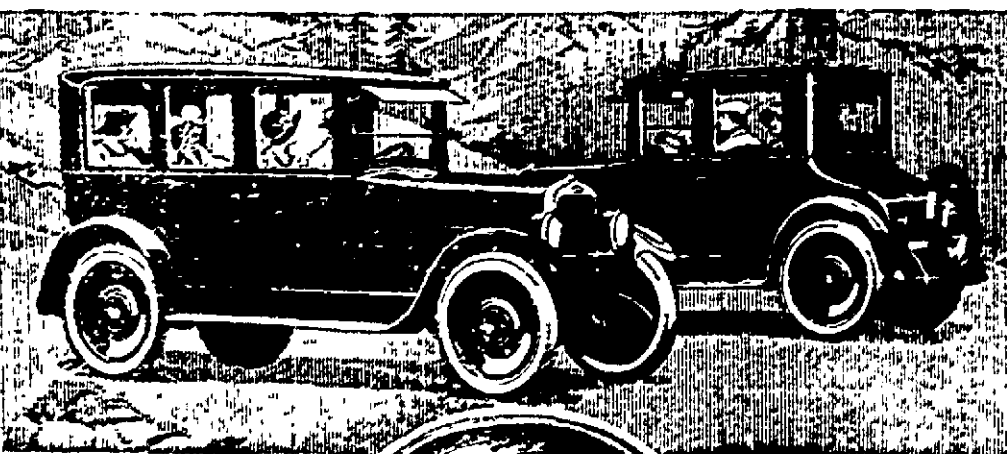

The Oakland engine is true blue because in
the natural advantages of a "Six" have
been developed to a remarkable degree.

There is freedom from annoying vibration,
which is essential to complete closed-car
satisfaction; there is extreme flexibility which
makes gear changing rarely necessary; there
is a surprising ability to respond to unusual
demands quickly and without fuss—all of
which qualities you will surely seek in
selecting your next closed-car.

Then there are four-wheel brakes (you cer-
tainly should not buy a car without this
proved essential); exclusive centralized con-
trols on the steering wheel; a special body
finish which retains its lustre indefinitely,
and a dozen other features.

Isn't it true that the problem of choosing
the right car is merely a matter of getting
the most and the best for your money?
Examine the True Blue Oakland Six. Drive
it yourself. We welcome frank comparisons.

"THE GREAT IDEA"

Approved by the Mayor, the Appleton Building & Loan Ass'n
Appleton Advertising Club and the
Chamber of Commerce

Believing that the building and ownership of homes makes for better citizenship and promotes the
happiness of the people, and realizing the great need of more homes in Appleton, we heartily approve
of the OWN YOUR OWN HOME educational campaign to be conducted here from May 26 to May 31
in the presentation of the moving picture "THE GREAT IDEA" at the Elite Theater.

This picture which has been brought here by the Post-Crescent, will be shown under the auspices
of the Mayor, the Chamber of Commerce, the Appleton Building & Loan Association, the Appleton Ad-
vertising Club, and the Post-Crescent.

From an examination of the prospectus of the picture, and a review of the outline of the informa-
tion work to be connected with it, we believe much good can be accomplished, in stimulating a desire and
determination for home building, if great numbers of our people will follow this educational campaign
and study the plans that will be suggested for solving the home building and home owning problem.

JOHN GOODLAND, Jr., Mayor,
APPLETON CHAMBER OF COMMERCE,
APPLETON BUILDING & LOAN ASS'N,
APPLETON ADVERTISING CLUB.

"Be It Ever So Humble There's No Place Like Home"

H-O-M-E

EVER SINCE the beginning of things home has been the center—the very corner-
stone and birthplace of all that is worth while. Through the ages the chief end
of mankind has been to protect, to cherish and to improve his home.

Home is the place where the family dwells in happiness. The presence of the
family, with its individual characteristics, changes a mere house into a home.

To secure a home of his own, man has suffered multitudes of sacrifices of all
kinds. Today it is easier than ever before to enhance the happiness of the family
by owning a home. Numerous organizations are ready and anxious to help the home
builder to acquire a home and make it the most attractive place in the world.

Co-operating with the Chamber of Commerce, the Building & Loan Ass'n, the
Mayor and Advertising Club, many other helpful organizations and individuals are
working to

Make Appleton a City of Homes More Homes — Better Homes

In this edition of The POST-CRESCENT and all next week you will find help-
ful inspiration and suggestion. The leaders in all related home building, home
equipment, home furnishing lines are co-operating to make Appleton a better city
—a city of better homes.

The Elite Theatre

is also co-operating in showing

"THE GREAT IDEA"

a five-reel feature picturing the story of a wife who wanted a real home. It tells
the obstacles she overcame to get a home—a story full of human interest, with
plenty of humor—a real feature picture. And also it is showing

LIGHTING THE DINING ROOM TABLE

Strongest Light
Directly Over Table

By M. LUKIESH

Lighting the table predominantly may be done in various ways. Certain types of ceiling fixtures, these which give direct light, and candle-lamps or even portable lamps on the table may be employed satisfactorily. Well-shaded candle-lamps on the table may be very attractive and effective. However, they must be short, in order that the view of the diners is not obstructed. Too often they are a source of glare. When candle-lamps are used on the buffet, as decorative nois, they should be heavily shaded and should contain very small lamps, so that they are not bright enough to over-balance the primary lighting effect. Wall brackets should perform the same service as candle-lamps if used in the dining room.

A portable table lamp will give the desired lighting effect. However, owing to the fact that the pedestal is apt to obstruct the view of the diners, it does not qualify in usefulness here to the extent that it does in other rooms.

A central ceiling fixture of the proper construction is the best solution of the dining room lighting problem. The shower, consisting of a group of pendant shades, is one of the most satisfactory fixtures for lighting the dining table among those which have been widely installed, provided the shades are of proper shape and are hung low enough. The shades should not be more than three feet above the table, their lower aperture should be small, and they should be deep and of dense glass or other material. Usually frosted lamps are more satisfactory than clear ones. The downward light from these dense shades is much more powerful than the diffused light and therefore the table is dominantly illuminated. A shower, which is quite satisfactory when hung low, is usually very unsatisfactory when hung high.

The old-fashioned dome gave a very good lighting effect but it was often so shallow that, when hung low enough to conceal the light source, it obstructed the view of the diners. Modern domes have been constructed to overcome the shortcomings of the old ones. They are smaller in circumference, but deeper, and with the greater luminous intensity of modern lamps, it is possible to place the light source high in the dome and thus it is shielded from the eyes. These domes may be of diffusing glassware of a warm tint, or of parchment or textiles so that the light which emerges from the sides of the dome is satisfactory and sufficient for the general lighting. This fixture should be hung low. Generally it is best to have its lowest point about two feet above the top of the table, but in any case the diners should be able to look across the table without seeing the light source. The proper hanging height depends upon the size of the dome and the position of the light source and it can be determined readily by experiment.

The combination bowl and shower is quite suitable. The pendant shades supply the direct lighting and the bowl the secondary lighting, which may be tinted as desired. The dining room is an excellent place for using wall boxes and other devices for concealing fitted lamps for secondary lighting effect.

The above types of fixtures are more satisfactory than other types; however, others are installed, such as candelabra. Individual shades or one large shade over all will improve the lighting effect from candelabra. In no case is the lighting effect comfortable and satisfactory if lamps are not concealed by shades.

Convenience outlets should not be forgotten in the dining room. One should be available under the dining table and the latter may be wired so as to provide outlets convenient for appliances and candle-lamps. Another should be near the buffet for connecting ornamental portables and appliances. This outlet may be duplex and is usually more convenient if it is at a height of three feet above the floor. Other convenience outlets may be desired according to the furnishing and requirements.

A GOOD IDEA FOR THE CELLAR LIGHT

In homes where the man of the house has a liking for tinkering with tools, there is usually quite a bit of excess current used because of the fact that he will leave the main cellar light burning while he is working at his bench. It is also true that his bench light is not always located ideally for all types of bench work, it having been found that a portable light is particularly desirable for the bench.

That both of these conditions may be met satisfactorily, some clever brain devised the method of stretching the electric cord length of wire running the entire length of the cellar. A turnbuckle should be provided for each wire, so it can be kept taut. A lamp and long cord can now be suspended on the wire and moved about the cellar at will to any place where a light is desired. This light can be on the stairs and can be turned on and off from that point.

How It Can Be Done Through the Kitchen

By G. C. BREIDERT

Home ventilating is by no means a new thought. At least women have been worrying about this problem for some fifty thousand years, more or less. Way back in the Stone Age the woman of the house must have found this one of her most serious problems. In spite of the otherwise comfortable quarters provided by the grottoes in the valleys of Loire in France and thereabouts, the Neanderthal man often times nearly died of death. The smoke from their domestic hearth fires was too much for their eyes, lungs to bear, and the cave man and his family were forced to take refuge and to endure the discomforts and uncertainties of the weather outside their grotto to escape the bad ventilation of the otherwise comfortable cave.

Ventilation Through the Kitchen

No Odors Can Reach the Other Rooms.

With the coming of the first house—a structure of boughs covered with clay and sod—the ventilation was by no means improved. The fire was built in the center of the floor and, as no outlet had been provided except through the low doorway, the eyes soon filled with smoke and breathing became difficult.

Even in the days of the Vikings the smoke rose to the rafters of the great hall, gradually filling the room until someone had the wit to cut a hole in the center of the roof through which some of the smoke could escape. Oddly enough, this undoubtedly was the origin of the present-day chimney, even though the chimney as we know it did not actually come into existence until the Twelfth century.

Neither Greece nor Rome nor any of the older cultures of the East had done better than to make use of an open grating in the roof. Ventilation, or rather the lack of it, like many things which have become accustomed to, has stubbornly resisted attempts toward betterment. At the present time, however, people are no longer satisfied to be rid of smoke alone.

This chimney has provided a means for disposing of it. The odors of cooking and the carbon dioxide and monoxide are still present, especially so in the case of gas and coal ranges. We desire most of all to be rid of the odors of cooking in the other rooms of the house. Of course the windows can be opened to let in fresh air, but as a matter of fact, they do not provide a good means of getting rid of the foul air. Frequently the raising of windows in the kitchen will seriously affect the fire, if not actually blow it out.

The solution, therefore, for these problems seems not to be the providing of additional means of letting in fresh air, but rather that of providing means for disposing of foul air.

Inasmuch as the kitchen seems to be the source of the many bad odors that are found in the home, it is only logical to assume that the means for disposing of the foul air should be located in the kitchen.

Electrical exhaust fans now are a household convenience. Placed in the kitchen high up near the ceiling or in an upper part of the window, or as in some cases, exhaust directly into the chimney, this fan provides a very efficient means of disposing of the smoke and foul air and the odors of cooking. Many dishes that are otherwise savory have fallen into popular disfavor, owing to the disagreeable odors when cooking. The kitchen ventilating fan sets up a current of air from and through the rooms of the house toward and through the kitchen, thus preventing the spread of odors toward the other parts of the house just as effectively as would sealed doors between the kitchen and adjacent rooms.

There is much more than merely the odor of cooking to be considered in the matter of kitchen ventilation. This alone is well worth the comparatively small cost of installing, but it is a step on the road toward the building, that with all its conveniences and comforts, its refinement and extravagance, it is still unable to protect itself against the odors of cauliflower, cabbage, sausage, etc. Many of us have come to feel that we can only enjoy these honest, wholesome, delicious foods surreptitiously, and when we are sure no guests will arrive.

All that is needed to make the enjoyment of such foods possible is merely an electric exhaust fan in the kitchen.

Better working conditions will be made possible for the cook, owing to improved ventilation and because the kitchen is kept cool. This also insures the preventing of the balance of the house from becoming overheated from the kitchen. In the next place real saving to decorations, hangings and furniture throughout the house by eliminating the fumes, smoke and soot, which invariably work their way from the cook stove throughout the house, and gradually deposit a film of grease on everything on which, of course, dust settles and dirt clings, ruining colors, fabrics and wall papers.

Many tragic kitchen accidents can be recalled by every one of us—accidents that have taken their toll in other parts of the house, depositing soot from something that has been burned. A coal range throws off ash dust which settles everywhere. Paint is dulled, ceilings blackened, and drapes are soiled. In fact, the housewife's work is many times trebled owing to her inability to restrict the dust from the range and the odors from the cooking to the kitchen itself.

This all can be prevented. An electric exhaust fan can be installed in the kitchen. A shutter is provided for the exhaust fan so that when it is not in operation cold air can be excluded from the kitchen. To make this precaution doubly sure, a small storm sash can be fitted to the exterior of the house with a cord and pulley for opening the shutter, which is a part of the fan installation. It is so arranged that it automatically opens when the fan is in operation. The storm sash need not be used except for exposed locations. It will be found that it will only be necessary to have the fan in operation about three hours a day—an hour during the cooking of each of the meals. The cost will usually not exceed three cents a day, except possibly on wash day, when it will be found desirable to keep the fan running practically continuously. An ordinary breeze fan is of no use as a ventilating fan, because it merely stirs up the air and does not force it out of the room.

Who has not experienced the smoky furnace or range during the first few hours after the fire has been banked for the night? If some method of ventilation is not immediately provided for, the curtains and in fact the whole interior of the house will become coated with a fine ash and soot dust. A few minutes running of the exhaust fan will remove all traces of smoke without cooling off the house by opening the windows.

The kitchen, which oftentimes owing to its location in reference to the balance of the house, is cold will be found to be as comfortable as any other room in the house after the exhaust fan has been installed. The same rule works both ways. It will mean a warm kitchen in winter and a cool one in summer.

THE PASSING OF THE BRASS BED

The brass bed has served its day according to furniture dealers and the general public. No one seems to want it any more in its natural finish. The only way the public will accept it is when it is lacquered to look like some wood, such as walnut or mahogany.

There are probably several reasons for this. In the first place the wood beds lend themselves more readily to the decorative scheme of the bedroom. The popular demand is for complete bedroom suites of some wood, and for the sake of economy many manufacturers make the brass bed and lacquer it to look like wood. It has the appearance of a solid wood bed, but is not so expensive.

In the second place a brass bed is hard to keep clean and shiny and every finger mark will mar the appearance. Wood finishes can be easily taken care of and the modern housewife is watching for household furniture and appliances which will lighten her work and also her time for the better things of life.

RESIDENCE SAFETY PANEL BOARD

WHY FUSES BLOW OUT

By F. B. ADAM

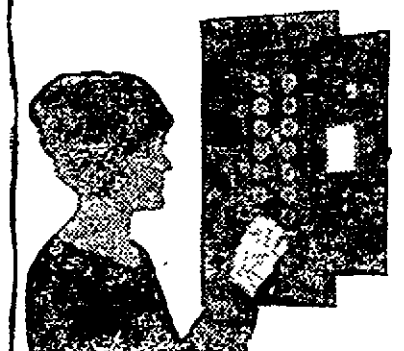

In order to protect the fixtures and appliances of your home and guard against burning by electrical short circuiting, a fuse that has only the safe carrying capacity of the branch wiring is placed so that it transmits the current to the branch wires from the main feeder. These fuses are located in a group that is known as a panel board.

Among great improvements in electrical equipment the new Triumph Type "C" Panel Board stands out as a real achievement. It was selected for the "perfect home," which is a feature of the film being shown here this week. This selection of the panel board was one of considerable importance. Of several panel boards on the market there was but one which seemed to contain all of the improvements made in panel board design and construction, and this one was so far in advance of the others that it was selected as a part of any perfect electrical home.

Usually the prospective home builder does not give very much attention to the panel board or fuse cabinet to be located in her home. A good many of them do not even know of the existence of a panel board until there had been some emergency in which the fuses have blown, putting out the lights.

This is not always due to defective wiring. As a matter of fact, it more often occurs when individual circuits are "overloaded." This means that two or more articles of electrical consumption are on a circuit where the protective fuse is not of sufficient capacity to carry that much current. This greater demand for current melts the little lead link which is in the fuse itself, automatically cutting off the current and protecting the wiring itself from carrying more than it was

EASY TO CHANGE A FUSE

Centrally Located Fuse Box.

This is an absolutely safe panel board. There are no uncovered live contacts which can possibly be touched, and the fuses, which are necessary in any home to protect the wiring, are made entirely safe and simple to change by the woman or children of the house. Nearly every woman has experienced the inconvenience of having a fuse blown just when she was in the midst of her ironing. It is terribly inconvenient to have the delay while the service man, your husband or your husband replaces the use, with a cold iron to make things still more unpleasant. And you dare not change the fuse yourself for there is danger of a shock that might and often does have serious results. Not only ironings, but washings, and, if your sewing machine has an electric drive, dresses and things that you need in a hurry, social functions and numberless other things may be annoyingly delayed by the blowing of a tiny fuse. And think what it means to have the lights go out when there is grave illness in the house! Delays are serious.

The comfort and convenience of your home depends to a great extent on your electrical work and entire satisfaction of electrical installation depends largely upon the type of panel board you select. For this reason, as much care should be given to the selection of the panel board as you would give to the heating plant or any other important unit.

NEW FAN AND HEATER HANGER FEATURE

By A. E. HAWES

"What is that unusual electric plug arrangement up there?" asks the prodigious father, inspecting the new home. "That's a fan hanger outlet," was the explanation. "See the heavy bolt on the plate holds the fan in place so that no bracket

is needed, and the fan is up out of the way, where it does the most good and does not endanger any children.

A slot and with the standard plug arrangement plugs into the receptacle and there you are. "We had one in every room and put them in for immediate use. You know there is no more

son for having only one electric fan in the home than there would be in having only one chair, and dragging that from room to room. "The hanger outlets are fine in the winter, too, for they will support the fan type glow heater just like the fan, and it takes the chill off the room quickly. You do not know how it relieves me to have the heater up where no hands or clothes can be burned. And in the bathroom, you have read of how the electric heater has endangered people and caused even fatal accidents by getting wet or falling into the tub. This hanger outlet prevents this.

"That fine oil painting in the living room, that dad gave us, is hanging on one of these hanger outlets, too, for it supplies the current for the light that illuminates the picture. It is wonderful how these modern electric innovations make the home a safer and happier place to live in. They are small and hardly noticeable, yet the daily comfort they bring is tremendous."

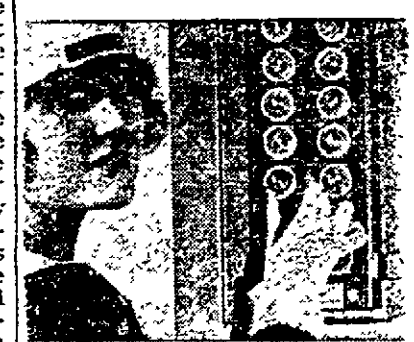

WHAT IS FUNCTION OF PANEL BOARD IN HOME?

WHY IT SHOULD BE SAFE

By A. E. HAWES

Usually the prospective home builder does not give very much attention to the panel board or fuse cabinet to be located in her home. A good many of them do not even know of the existence of a panel board until there had been some emergency in which the fuses have blown, putting out the lights.

This is not always due to defective wiring. As a matter of fact, it more often occurs when individual circuits are "overloaded." This means that two or more articles of electrical consumption are on a circuit where the protective fuse is not of sufficient capacity to carry that much current. This greater demand for current melts the little lead link which is in the fuse itself, automatically cutting off the current and protecting the wiring itself from carrying more than it was

designed for. With a panel board the woman merely unscrews the blown fuse and puts in a new one with the same ease and nearly in the same manner that she would replace a burned-out lamp globe.

Because of this unusual safety, it is possible to place this panel board at a convenient height from the floor to be reached by anyone of average height and located in an easily accessible place on either the first or second floor of the home. This location permits the main feed wires to come from the basement and go to the panel board from which all of the circuits of the house are distributed. The economy will readily be seen in running only two wires from the basement instead of all of the wires necessary to supply the several circuits of the residence. This saving in installation and wiring, as well as the saving in labor, completely offsets the slightly higher cost of this new style of panel.

THE WATER SOFTENER

PLENTY OF SOFT WATER

Water is the greatest solvent known to man. It will dissolve a greater number of substances than any other liquid and for that reason it contains, always, many impurities. Rain falling from the sky gathers up all the particles of dust, smoke, impurities and foul gases that have risen from the ground and are floating in the air. When it strikes the earth some of it runs off along the surface of brooks and rivers, and some sinks into the ground to form springs and supply our artesian wells. In any case the water is in contact with the earth passing over and through it, and its wonderful dissolving power is hard at work gathering up mineral and organic impurities at every foot of progress.

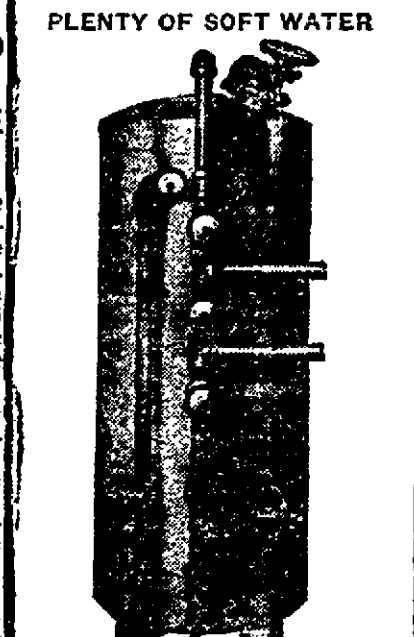

"Hard water" is the name applied to water containing lime and magnesium compounds. In solution the amount of lime and magnesium determines the degree of hardness. These compounds are distributed everywhere throughout the earth's surface so that although some water supplies are softer than others, it is a rare occurrence to find soft water existing in nature. Until the zeolite water system was developed, absolutely soft water, containing no hardness (zero water) had been produced only in the laboratory. Today, however, water is absolutely soft and free from all hardness is available in every home by means of the water softener. It makes the hardest water as soft as rain water.

The advantages of clean, soft, zero water in a household are really tremendous. Many troubles and discomforts that are attributed to other causes can be traced to hard water. The pores of your skin are little holes through which your body expels poisonous impurities that have accumulated, and if they are stopped up, the skin rapidly becomes unhealthy, growing rough and harsh to the touch.

When you wash in hard water, the lime and magnesia in the water combine with the soap, forming a sticky curd that clogs up the pores, which is the reason why hard water is bad for the skin. Soft water on the other hand prevents the formation of soap curds and by thus keeping the pores clean and open, imparts a soft, delicate texture to the skin. Very young babies should be bathed only in soft water.

The same sticky soap curds that clog up the pores of your skin will deposit upon the fibres of your linens when hard water is used, making it difficult to get them completely clean. Clothing washed in softened water has a sweet-smelling freshness that is a constant delight, and much less soap is required than when hard water is used.

The lime and magnesia in hard water will deposit scale in hot water pipes, boilers, heater coils, etc., that eventually clog them up so much as to reduce the flow of water and interfere with service. Repair bills and new piping run into a lot of money besides putting your household to much inconvenience. A water softener will pay

No Scale in the Boiler.

for itself by eliminating most of your plumbing troubles, for it will absolutely prevent the formation of scale. To anyone who has had the experience of putting a hot water coil in his furnace about every second year, this has great significance.

FORMER MUSICIAN'S INSTRUMENT NOW USED BY AUTHOR

Once Used for Evoking Beautiful Harmony—Now a Useful Piece of Furniture for Everyone.

Before the days of the modern piano, instruments similar in purpose, but somewhat different in construction, were used to give expression to the beautiful music which has been handed down to us from the great masters of harmony. These instruments were known under various names, such as "Clavicordes," "Clavichords," "Spinnettes," "Spinettas" and "Melo-deons." Their origin has been traced back to the zither and harpsichord of the early centuries. Finally the name "spinnet" came to be the most commonly used term in the homes of the Sixteenth, Seventeenth and Eighteenth centuries. A Venetian named "Spinetti" is supposed to have invented the instrument, and its name to have been derived from his, but other authorities state that the name came into use because crow quills or "spines" were used to twang the strings of the spinnet.

The spinnet was made in many beautiful styles, reflecting the periods through which it passed, and of rare and beautiful woods, often inlaid and carved by master craftsmen. Surviving spinnets of those days are rarely seen now except perhaps in a museum. They are almost priceless.

When the Puritans left their homes in England to start life in a new and strange land, the spinnet was not left behind. It was brought with them, and used by them and succeeding generations, especially during the Colonial days when it was exceedingly popular. It made merry and pleasant the frolics of our Colonial ancestors.

Light a Right Angle.

In a few of the old southern and New England homes you will still find the spinnet, perhaps tucked away in the attic—if the owners do not appreciate the value of their rare possession—or, in case they do occupy a place of honor in the best room in the house. It is, of course, never used for its original purpose, because of the modern piano which has supplanted the delicate, beautiful instrument for general use, and because they are so frail that hard usage would destroy them.

However, it remained for a California woman to revive the spinnet for practical purposes. Not, it is true, for the same purpose as it was originally intended, but—out of her wonderful old-fashioned sense of rare beauty. Truly we are indebted

to her ingenuity, for it has given back to us the spinnet in modern form for use as a desk light. The lines of the spinnet are ideally suited for the safekeeping of valuable papers, and comfortable for the writer's use. They are now made in beautiful woods, and different styles, faithful reproductions of antiques, and they furnish a note of charm to any room of the home. There is no other style of desk so artistic and so clever of design as the spinnet desk, the modern interpretation of the old musical spinnet of our forefathers.

LIGHTING THE WORKSHOPS OF THE HOME

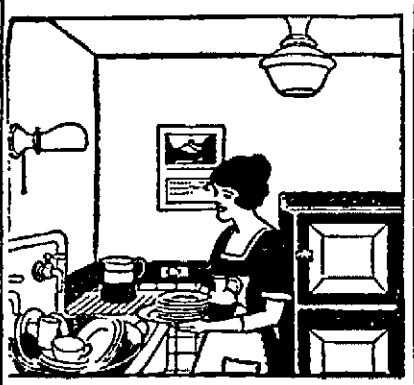

By M. LUKIESH,

Director, Laboratory of Applied Science, National Lamp Works of G. E. Co.

In the kitchen and basement the artificial lighting problem is entirely utilitarian. The chief problem is that of equipping these places with fixtures, which are so designed, located, and equipped with proper lamps as to give the proper distribution and amount of light. Industrial and commercial places are recognizing the value of adequate and proper lighting. Why should we not illuminate the workshops of the home satisfactorily? Why should the housewife be handicapped by antiquated lighting conditions?

A common error in the kitchen is to suspend a combination gas-and-electric fixture from the center of the ceiling. Owing to the gas burner, this must extend considerably below the ceiling and is often in the way. Besides this low position of the light source reduces their effectiveness, because the worker is usually working in her own shadow. The ceiling-fixture should be hung close to the ceiling, so that such shadows on the work will be avoided. The best type of fixture for this room is one of diffusing glassware which is entirely enclosed. To obtain the desired intensity this should be equipped with either a 100-watt clear lamp or a 150-watt daylight lamp. Another fairly satisfactory fixture is the open glass reflector hung at the ceiling, and this should be equipped with a diffusing or bow-enamelled lamp. Wall-brackets should be installed over the important places, such as the stove, work-table and

DON'T WORK IN YOUR SHADOW

Light Over Sink.

shk. If the work-places in the kitchen have been laid out before-hand with an idea of saving "mileage," it is easy to locate the outlets for the secondary fixtures.

Convenience outlets should not be overlooked in the kitchen. Two or three, at least one of which is duplex, can be utilized very easily. One, preferably the duplex one, should be near the kitchen table. It will be found that it is most convenient to have this one in the wall and about three feet above the floor. If there is an ironing-board in this room, an outlet should be provided for the iron. The increasing use of electric appliances such as the dishwasher also emphasizes the need for properly located convenience outlets.

The basement of the house is often much neglected from the standpoint of artificial light. Usually a light-source in the center of the basement near the heating plant is considered sufficient. A number of ceiling outlets in the basement is really needed and will be appreciated. One near the foot of the stairs or on the stairway assures safety in ascending and descending. A light-source above one end of the laundry trays is very desirable and a 100-watt or 150-watt daylight lamp encourages good laundry work. Outlets in the fuel-bins, toilet and fruit-cases are desirable and indicating switches at the entrances of these rooms are convenient.

Glass or metal reflectors equipped with diffusing lamps of about 50-watt are satisfactory for most of the fixtures in the basement. However, the one over the laundry trays should have a little more attention. A fixture of enclosing, diffusing glassware, similar to the one recommended for the kitchen, equipped with 150-watt daylight lamp is very satisfactory. This should be placed over the left-hand tub and close to the ceiling. Another fixture which is satisfactory here is a porcelain-enamelled, dome-shaped steel reflector equipped with the same size lamp. Next to the kitchen, the laundry is the most important workshop of the home and for this reason the lighting should be in no way neglected there.

The lighting of the average bathroom is very satisfactorily accomplished by two brackets—one on each side of the mirror. Diffusing glass shades containing 40 or 50-watt lamps provide adequate illumination. A convenience outlet installed in the wall near the mirror and three feet above the floor is

very desirable for appliances. If an electric heater is not built in the wall, a convenience outlet may be provided for it near the floor at the proper place.

Convenience outlets play an important part in the electrical equipment. Electric washing-machine, ironers, irons, refrigerators, and many smaller appliances are found in the fully equipped modern home. Outlets for these appliances should be planned and installed in the most advantageous places.

LIGHT ON BOTH SIDES FACE

Face, Not Mirror, Lighted.

HOW TO LIGHT THE BEDROOM EFFICIENTLY

By M. LUKIESH

Director, Laboratory of Applied Science, National Lamp Works of G. E. Co.

The lighting problems in the bedroom are both utilitarian and esthetic. As in other rooms we must analyze the room and its activities before we are able to design the lighting in the best manner. First the best arrangement of furniture must be determined. In the case of new houses this should have been done before the windows were finally located. However, in the average bedroom there is usually only one good arrangement of furniture. After we have determined the placing of the furniture it is easy to designate the positions of the lighting units, if certain fundamental principles are recognized and understood.

The lighting at the mirror on the dresser or dressing-table is the first and most important problem in the bedroom. To adequately and satisfactorily illuminate a person before a mirror, a light-source should be provided at each side of the mirror and at a height slightly above the person's face. This lighting eliminates shadows and well-covered wall-brackets, brackets attached to the dresser, or two portable lamps of the proper height may provide this lighting.

In the case of the dresser, the wall-bracket outlets should be about 66 inches above the floor, and a distance of five feet between the brackets is desirable, even though the dresser may be less than this in width. This distance tends to reduce the glare, but if the shades are dense, ocular discomfort is seldom experienced in the bedrooms, because the ceiling and wall-coverings are usually of light tints. The glare of a lighting unit increases as the brightness of the background decreases. A duplex convenience outlet should be provided for smaller dresser lamps or for brackets if they are mounted on the dresser.

The dressing-table should be treated in the same manner as the dresser, but inasmuch as the user is usually seated the brackets may be lower. Here also convenience outlets should be provided for portables. It is also well to provide a convenience outlet in the bedroom, near either the dresser or the dressing-table and about three feet above the floor. This will provide a connection for electrical appliances.

Near the head of the bed, or between the beds in the case of twin-beds, there should be a duplex convenience outlet. A portable table or floor lamp, or a bracket attached to the bed is both decorative and useful in the bedroom. This outlet may also be utilized for various appliances useful in the bedroom.

The room may be wired for a central ceiling outlet, but a fixture at this point does not provide proper lighting for important places such as the dresser and dressing-table. A ceiling fixture, if used, should be centered upon the room for general lighting of moderate intensity, excepting in very small rooms. A tinted inverted bowl, with possibly an appropriate hand-painted design, is a desirable unit for this purpose. Another unit which may be equipped with a decorative shade harmonizing with the draperies or wall-coverings is one employing textile shades.

The clothes closets should be wired for a pendant lamp. Such lighting will be welcomed often and will pay for itself many times. Usually a pull-chain socket is satisfactory.

Portable lamps for the dresser (at which a person stands) should be tall and slender—about 24 inches in height—in order to illuminate the face properly. Such portables for the dressing-table (at which a person is usually seated) should be about 14 inches in height. Portable lamps are useful in the bedrooms and they may be very decorative. There are many lighting novelties in the form of portables which are appropriate for the bedroom. A dim light is often desired and certain decorative night-lights are available for this purpose. Such units placed under the bed are particularly useful in the nursery or bedroom and in these other cases where a low intensity of illumination is desired from a concealed or well-shaded source.

YOUNG HUNTER IS SHOT THROUGH KNEE

Joseph Seidl Is Recovering at
Green Bay Hospital from
Hunting Accident

Seymour—Joseph Seidl, 17, son of Mr. and Mrs. Joseph Seidl of town of Seymour, is recovering nicely at St. Vincent hospital, Green Bay, from the effects of a gunshot wound. The youth was shot through the left knee accidentally while hunting last Sunday with his brother. A 22-caliber rifle bullet passed through the knee joint and lodged in the bone. It was necessary to cut through the bone to remove the bullet.

Simon Schub of Freedom, was operated upon a short time ago and 410 gallstones were removed. He is at home recovering nicely.

F. C. Wegner is home from Milwaukee, after spending the winter in that place.

Arthur Gangel had a spare tire rim and cover stolen Tuesday night from his Ford coupe.

Union Memorial services will be held at the Methodist church Sunday morning. Members of the Grand Army of the Republic, the Womens Relief corps and the American Legion and auxiliary will attend. Seats will be reserved for them.

The Junior promenade held at the auditorium Tuesday night was well attended. One hundred and fifty tickets were sold.

Farmers are busy this week sowing small grain.

William Hurst of Osborn, is preparing to plant 30 acres of sugar beets on his farm this year.

W. Vincentsent and E. J. Riedl of New London, have taken over the repair shop of the Seymour Motor Car Co.

Mr. and Mrs. Albert Reetz and family called on relatives here Wednesday.

Mrs. Eugene Caffisch of Brillien, has been here several days assisting her sister, Mrs. John Blumreich in caring for their father.

Cherry Hill school closes May 20 with a picnic dinner served by ladies of the district. E. H. Uecker is the teacher.

WOMEN'S SOCIETY WILL HOLD CARD PARTY SUNDAY

Special to Post-Crescent
Combined Locks—A card party will be given by the A. S. Womens society Sunday at the park pavilion. A lunch will be served.

Martin Ver Beten of St. Paul arrived Monday to visit with relatives. John Van Cuyck is building a new house near his residence. Work was begun last week.

Joseph Wittman and family of Brillien, spent Sunday at the home of Louis Hartzheim.

A larger crowd attended the first dance of the season Wednesday evening at the park pavilion. Music was furnished by Mellorimba orchestra of Appleton.

Martin Ver Beten of St. Paul and Miss Kate Jansen spent Tuesday with relatives at Oshkosh.

Mrs. Ralph Hansen entertained several ladies at her home here Tuesday evening.

Mr. and Mrs. J. Burden of Oshkosh spent several days here with Mr. and Mrs. H. A. Newton.

The Combined Locks public school closed Thursday for this term. Both teachers, Miss Verna Lockery of Appleton and Miss Winifred Ryan of this place resigned and will not be back next term.

P. A. Smith spent Saturday and Sunday on a fishing trip up north. The Rev. H. Hallinda and Mr. and Mrs. Louis Hartzheim spent Monday at Green Bay.

William State and family autoed to Wisconsin Rapids to spend Saturday and Sunday with relatives.

Fred Rangette and Edward Revolt and family spent Sunday at the home of their daughter, Mrs. Charles Marquardt of Marinette.

E. A. Newton and family spent Saturday with relatives at Stockbridge.

Howard Rowe and Mr. and Mrs. R. A. Rowe of Milwaukee, spent Sunday with Dan C. Jansen and family.

William Erickson and family attended the ice cream social of the Reformed church Wednesday at Kaukauna.

Picnic Closes School

Pupils of Woodlawn school, Grand Chute, taught for the past year by Mrs. Anna Read, celebrated the closing of that school with a picnic held indoors.

Own Your Own Home IS RIGHT IF BOUGHT RIGHT

It's easy to buy right, and equally easy to buy wrong.

Circumstances largely enter into Home buying. We positively will not sell you a Home even though priced right, if beyond your means or ability to pay for and then maintain.

You should not feel burdened with a Home, but your Home well bought should make you feel rather Homelike.

We arrive at above conclusions through our 27 years experience in the sale of Homes and Homesites.

Hence our service to you when contemplating a Home would be very helpful.

Let us show you.

P. A. Kornely

LOANS — REAL ESTATE — INSURANCE

It Paysto Engage An Architect

Some People Think to Engage An Architect Is An Added Expense — Nothing Could Be Farther From the Truth

Good business judgment requires the services of a professional man when any considerable investment is made. Most losses can be traced to the lack of expert advice. This applies forcibly to the building of a home, which involves the expenditure of several thousands of dollars.

It is unsatisfactory merely to purchase plans and then attempt to supervise the building of the house yourself, for then you take on your own shoulders all the cares and worries, the petty annoyances of deciding the thousand and one little points that come up day by day while the house is in the process of construction. You are loaded down with a large amount of detail work that can be more sensibly handled by an expert—usually with more profit to yourself.

Houses designed by an architect stand in a class by themselves—it doesn't cost you any more to build an attractive house than an ugly one. It's all a matter of skill, and for skill you go to the skilful architect.

USE ELECTRIC FAN ALL YEAR ROUND

Formerly summer could not be escaped except by taking refuge by the sea or in the mountains; for the folks at home there was almost no relief until the advent of the electric fan. Now in a city apartment of two rooms and bath with a fan in each room one can often be more comfortable than in a crowded summer hotel in the hills.

"Many people get only half the comfort value of their fans because they do not plan their use," said a thrifty housekeeper. "Our flat is well ventilated with outlets so that we can attach our fans without unscrewing lamps from fixtures and the cost of running the fans is so slight in comparison with the comfort we enjoy, that we have ceased to regard them as luxuries but look upon them as absolute necessities. Neither do we store them in the fall for we find so many uses for them they are all-the-year-round utilities."

The use of the electric fan is quite as important in winter as in summer. In cold weather it reverses its well-known cooling effect and adds materially to the warmth of the rooms, especially under-heated rooms. This is because steam and hot water radiators do not throw out heat waves; they simply raise the temperature of the surrounding air which must have thorough distribution before the room can be warmed.

Throughout the winter with the use of an electric fan the furnace in the home may be started later in the morning than would be otherwise possible. The rapid diffusion of heat warms the room in so much shorter time than without the use of the fan that the winter's supply of coal is made to go further.

GERMAN KILLS SELF TO ESCAPE BILLETING LAW

By Associated Press
Trepow, Germany — Paul Nickel, formerly chief of the local board of Trepow, killed himself rather than surrender two rooms of his dwelling to a family with many children, in accordance with an order of the housing committee.

Nickel, who was 70 years old, had resisted the commandeering of his rooms, but when it became evident that he would lose the case and be forced to share his home with strangers, he shot himself. This did not kill him, so he hanged himself, leaving a letter saying he could not bear to have part of his home taken from him.

The German super-gun that pounded Paris during the war is credited with a range of 73 miles, as compared with the 22-mile maximum range of American 14-inch naval guns.

Mission Bungalow Has California Air

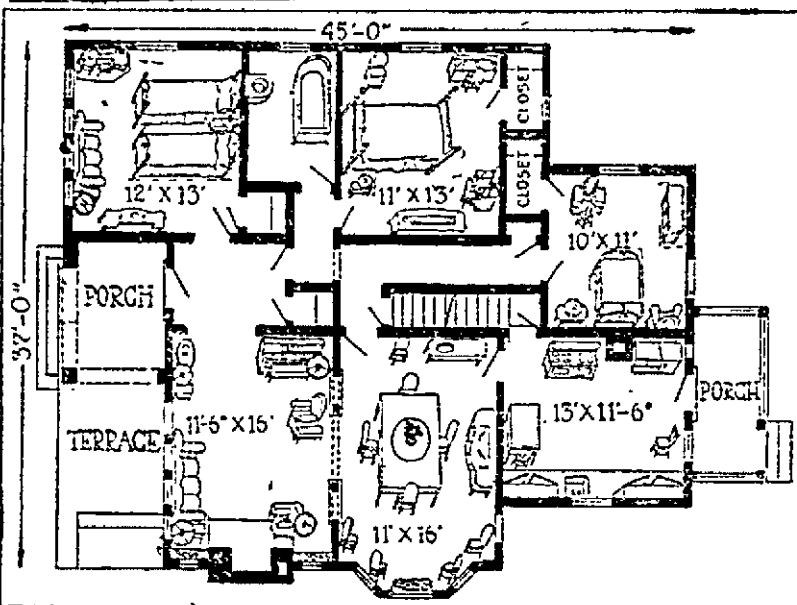

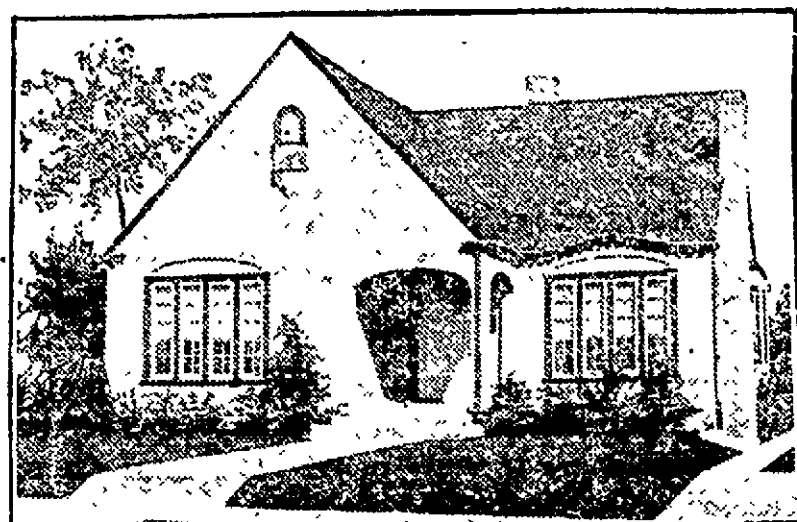

PHOTO AND FLOOR PLAN OF MISSION BUNGALOW

In designing modern bungalows many architects have followed the mission style that is popular in California. This calls for recessed entrance, plain stucco walls, high pitched rooms with sharp gables and some unusual decoration to break the plain appearance, such as the small window and balcony shown on the mission bungalow design illustrated.

This home contains six rooms, living and dining rooms, kitchen, three bedrooms and the bathroom. The entrance door from the recessed porch leads into a vestibule. To the right through a casad opening is the living-room.

An open fireplace is set into the outside wall at the end. A colonnade opening connects the living-room with the dining-room, which has a casad window to provide plenty of light and to break the straight lines of the room. At the back is the kitchen.

The three bedrooms are ranged along the opposite side of the house. The bedroom at the front is especially attractive, as it has four windows at the front and one at the side. Between it and the bedroom at the back is the bathroom.

A hall leads to the third bedroom which is alongside the kitchen.

This type of bungalow is especially suitable for suburban surroundings, as the more plantings of trees, shrubs and flowers the better the mission style appears.

Any of the building material may be used in this home. Wood frame with wood or metal lath or any of the patented bases for stucco, or brick, tile or concrete are equally suitable for this home building design.

The cost of the home will range from \$7500 to \$8500, depending on the material used.

FLAPPERS DECIDE KISSES ARE PASSE

Newark Says They Are in Class
With Braided Hair, Corsets
and Bustles

Newark, N. J.—Now goes the kiss, joining the vast army of things passe. To kiss! It is vulgar! It is vulgar! It is Victorian! Yes, it is thoroughly unhygienic. But it is enough that the kiss is not stylish, for the fastidious mad certainly is not going to be old-fashioned.

That is, as the anti-kissing clubs of Newark have decreed it, to kiss more than once a month belongs to the age of braided hair, corsets, merry widow hats, long stockings, and, yes, even bustles.

However, one kiss a month, strangely enough, is yet within the bounds of style, sophistication and hygiene. But mind you, if this compromise with the protesting young blades is violated, it will cost 50 cents per violation, to be paid by the kisser and into the coffers of the anti-kissing club.

All this has come about as the result of a flapper revolt, inspired by Dr. Charles Craster, city health officer, and Mrs. Pollard, of the board of education. The two have pointed out the pitfalls of unrestrained flapperism—not moral dangers, but purely hygienic ones.

So, in the name of health and beauty and long life, the girls are setting up new ideals for flappers. During Girls Week, when Newark was governed by high school girls and had its first girl-mayor, Miss Elizabeth Bluet, the anti-kissing campaign was launched.

Dr. Craster's revelations on the kiss had won them.

"The mouth is a perfect incubator," he told them in the cold terms of his science. "It is warm, perpetually 98 degrees, it is dark and it is moist. Any germ thrives and propagates under the ideal conditions the mouth offers it."

"Thus, in a kiss, deadly germs find splendid opportunity to get a change of scenery."

And similar warnings were given against the lipstick and the powder puff.

"Careless girls," Dr. Craster points out, "borrow and lend their lipsticks and powder puffs. This exchange of things touched to sensitive parts of the skin presents just another chance for the carrying of germs."

"Lipsticks, powder puffs and kisses are as unsanitary as the public drinking cup," he declared.

As for the aesthetic side of the question, Dr. Craster said kissing is a superficial habit, having no physical basis.

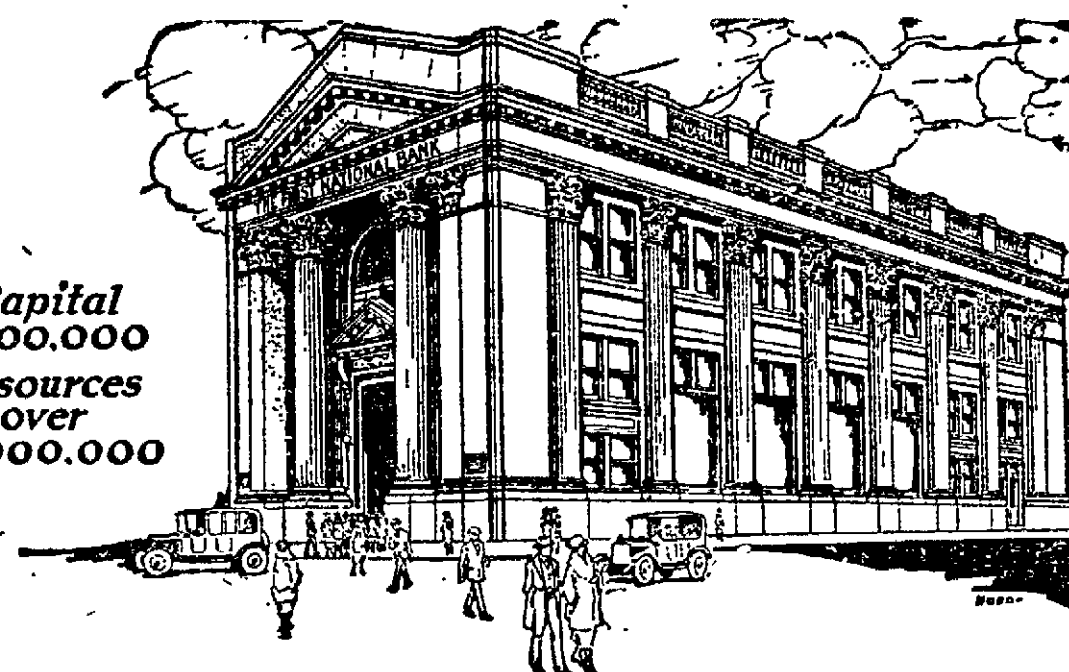

Only eight civil officers of the United States have been impeached and tried before the Senate, and only two of them have been convicted.

"The Great Idea"

THE NATURAL desire of everyone is to be independent. The secret ambition of the vast majority probably is to become independently rich. However, comparatively few people have realized this ambition. But there is an independence that is within the reach of nearly every person----

You Too Can "Own A Home"

We are presenting a few from our large listings. These homes represent good buys and many of them can be purchased on liberal terms.

Homes to Match Your Dreams

8 room, all modern home. - Hot water heating system. Beautifully finished throughout in quarter sawed oak. Located just outside the city limits where taxes are low. On street car line. Two lots. An abundance of berry bushes, shrubbery of all kinds and orchard. Large garden space. Price \$8,500.
All modern home in the First Ward. Hot water heat. Double garage. Located on car line. Price \$11,000.

- JUST BUILDING A SIX ROOM HOME

We are building a 6 room home, modern in every detail, which will be ready for occupancy about June 15th. Located in the 5th Ward. Bus line within one block of this home. Price \$5,000. We can give buyer very reasonable terms on this home.

Bargains in Small Homes

Five room, all modern bungalow. One of the finest looking small homes in the city. Modern in every respect. Large lot, 70x250.
A BARGAIN AT \$6,000.

7 room house, located within 4 blocks of high school. Good basement, electric lights, sewer, water, gas. Large lot. Price \$3,700.

5 room home in the First Ward, near street car line. All modern except heat. Price \$3,600.
4 room home in 5th Ward. \$2,200.

Choice Building Lots

We have lots in all parts of the city. You are sure to find something to suit your taste and pocketbook. Prices from \$100 to \$2,000. Sold on terms.

5th Ward Building Lots \$25 Down—\$10 per Month

We have twelve very good building lots, located in the 5th Ward with sewer and water in. We will sell these lots for \$25 down and \$10 per month. Act now if you would reserve one of these lots for your future home, or for investment purposes.

LUTHERANS GIVE MONEY TO GERMANS

Special to Post-Crescent

Stephensville—Sister Anna Friedland of the Bethanlian home in Berlin, Germany, spoke in the Ellington and Stephensville Lutheran churches Sunday of last week for the benefit of the poor and suffering cared for at this home. She was much pleased with the contributions received.

The Catholic Knights of Wisconsin attended the initiation at New London, Sunday. Large delegations from Clintonville, Hortonville, Greenville, and Macawa also were present.

Owing to dissatisfaction in the result of the academic part of the town elimination contests held here some time ago, another meeting was called Monday, at which A. G. Mealing and A. L. Collar acted as judges.

Kimm Trunty won first place, Lloyd Jack second and Jennings John third.

The Ellington Pig club met May 15 and elected Lorenz Peebles president in place of Gordon Levezow, resigned. Buttons were given to each member present. Lesson No. 2 was assigned for the next meeting, June 30.

The bird houses built by the seventh and eighth grades have been placed on the school property.

Mrs. Robert Gregory is spending a week with her father, Philip Schwab. Mr. and Mrs. John Casey and Miss Mary Casey attended the Charles Holz funeral Sunday and called on friends at Blenheim.

Card Party, Combined Locks Hall Sunday Night, given by Altar Sodality for benefit of St. Paul Church. Everyone invited.

Pettibone's Model House Will Guide Prospective Builders Over Pitfalls

Hundreds of people who would like to own their own homes are deterred from making a start toward acquiring property because of difficulties—real and fancied—which they fear make building a great burden. They have heard many stories of troubles of the home builder until they fear to attempt building. Own Your Home week, which will be observed here from May 26 to 31 is for the purpose of removing doubts of prospective builders.

Nowhere can better or more accurate information be obtained than from the man who has built a house. If prospective builders could watch another man building and take advantage of all that he learns he would be able to make his own work easier.

The Pettibone-Peabody Co., with that thought in mind, is erecting a "model house" in Bellaire park which is open to inspection by the public. All the records and all the information which this company has acquired as part of the home building project are available to prospective builders who should be able to obtain a vast amount of valuable information from them.

This house, not constructed to meet any person's particular needs but rather to show what kind of a house can be built here for a medium sum, is being built by Appleton labor from materials manufactured in Appleton.

The building plan is the winner in a prize contest in which about 70 architects participated. Every detail is carefully worked out so that maximum efficiency is obtained for the money expended.

The total cost of the building, so far as present estimates go, is \$9,025, without figuring interest on investment. The lot, which cost \$1,200, is included in the total figure. A garage also is included in the property.

The purpose of this model house is to stimulate interest in "better homes" and to give to prospective home builders the benefit of the experience of a builder. The property will be sold after completion for exactly what it cost.

It is probable that dealers in home furnishings will be invited to furnish the home so that people may see how a well planned home can be tastefully furnished.

W. F. McGowan returned from St. Paul Friday morning where he attended a meeting of representatives of the New York Life Insurance company.

CUT THIS OUT—IT IS WORTH MONEY

Send this ad and ten cents to Foley & Co. 2835 Sheffield Ave., Chicago, Ill. Writing your name and address clearly. You will receive a ten cent bottle of FOLEY'S HONEY AND TAR COMPOUND for coughs, colds and hoarseness, also free sample packages of FOLEY PILLS, a diuretic stimulant for the kidneys and FOLEY CATHARTIC TABLETS for Constipation and Biliousness. These wonderful remedies have helped millions of people. Try them! Sold everywhere. adv.

LEPPLA RESIDENCE DAMAGED BY FIRE

(Special to Post-Crescent)

Medina—The roof of the Joseph Leppla residence, in the village, caught fire, about 3 o'clock Wednesday morning. With the help of neighbors the fire was soon extinguished, although a large part of the roof was consumed. The blaze is believed to have started from sparks from the chimney.

Farmers in this vicinity are getting their spring work done between showers. Most of them have their grain sowed and are busy planting corn and potatoes.

The condition of Mrs. Henry Krock, who suffered a paralytic stroke, several weeks ago, is critical.

Mr. and Mrs. Ed. Westphal and Mrs. Otto Selfert and daughter of Shawano, were here Sunday to attend the funeral of Miss Lizzie Clemons of Dale.

Mr. and Mrs. Leonard Nutter and daughter Nola of Dale, called in this place Tuesday evening.

Mr. and Mrs. Floyd Clemons were Appleton callers Thursday afternoon. Mr. and Mrs. Edw. Krock were at Appleton Saturday evening.

Mrs. Edward Krock and Miss Fredah De Vet were at Dale, Monday afternoon on business.

Taken in Fraternity

Walter Fitzmaurice, a nephew of Mgr. W. J. Fitzmaurice, Appleton, a sophomore in Marquette university college of journalism, Milwaukee, has been initiated into the Marquette chapter of Sigma Delta Chi, national journalistic fraternity.

Home ownership be it a small or large abode, gives to man, everywhere, great satisfaction and content.

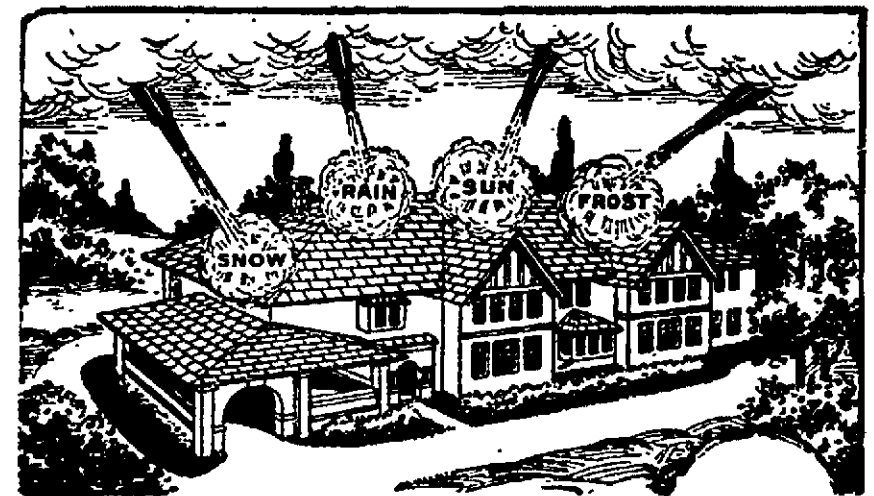

OUR Investment Service by means of Our Partial Payment Plan gives to every man a basis whereby to build up a fund toward home ownership.

First Trust Company of Appleton
Appleton, Wisconsin

ROOFING For Every Home or Building

No part of your home is so much exposed to the elements as the roof. Poor roofs allow the water to enter in time and spoil the interior, plaster, wood-work, rugs, furniture, etc.

It is cheaper to buy good roofs they last longer and give Better Satisfaction

Roll Roofing Roofing Shingles Tar and Gravel Roofs -- Asphalt Roofs

Tar and gravel roofs are ideal for flat roofs. They are made and laid in a way that gives you service for more than 10 years.

Built up asphalt roofs are also fine for flat roofs. They are especially constructed so as to withstand years of hard usage.

Factory Installed and Guaranteed

Of course, you want to know beforehand that that new furnace of yours is going heat your house.

Your neighbor's "HOME" may heat his house well enough; but that doesn't prove that that very same installation would heat yours—any more than that his best suit of clothes might fit you.

That's exactly why every HOME Furnace is Factory-installed—it's tailored to fit your own house; and you know when you pay for it that it absolutely will heat it. In fact, the factory gives you a written, five-year warranty to that effect.

In other words, you have the binding guarantee of a large, financially-sound corporation that next winter, when the Storm King blows his coldest, your home will be snug and cozy.

There are other HOME advantages you can't afford to overlook, such as the one-quarter to one-third saving in the fuel bill due to the damperless hot blast ring; the big combustion chamber that burns up the soot and smoke; and the breast-high shaker and big feed door that make the HOME so easy to run.

Consult our local factory branch at once or write direct to the factory.

Our free booklet, "Warmth Without Worry," tells about other HOME advantages. Write for your copy today.

PLANNING THE WIRING FOR THE HOME

By M. LUCKIESH
Director, Laboratory of Applied Science, National Lamp Works of G. E. Co.

The average home has about one convenience outlet, very few wall outlets and the wiring is practically confined to one ceiling outlet per room. We are now living in an electrical age and our homes should be equipped so that we may enjoy the convenience, comfort and pleasure of electrical energy. Electricity first gave us mere light, then more light and now it can provide adequate and charming lighting. Also many electrical appliances have arrived to make housework easier and home life more delightful. If we are to take advantage of these joys our homes must be adequately wired. The planning of the wiring in a home should be one of the first steps in home design. Thought and care should be given to this when we have blueprints before us. Let us visualize and plan the wiring for an imaginary, modern, six-room house.

First Floor.
Porch: The porch should have a ceiling outlet equipped with a fixture of enclosing glassware and controlled by a wall switch indoors. If there is merely an entrance, a fixture might be installed over or at the side of the door and controlled by a wall switch indoors. It is well to install a convenience outlet in the wall about three feet above the floor, thus providing a connection for electrical appliances.

Hall: One ceiling outlet equipped with a fixture of enclosing glassware and controlled by a wall switch is generally satisfactory. One duplex convenience outlet might be provided if the space is large enough for portable lamps to be used.

Living Room: Wiring for one or two ceiling outlets, depending upon the size of the room, and controlled by wall switches should be installed. These may or may not be equipped with fixtures, depending upon the householder's taste. If a ceiling fixture is used it should be hung close to the ceiling and the light sources should be shaded. If it is not desired, the ceiling should be plastered over so that the ceiling of the convenience outlets should be controlled by a wall switch, so that light may be obtained on entering the room.

In a room about 18 by 22 feet there should be about five convenience outlets. These outlets are primarily for portable lamps but they are also very useful for electrical appliances.

If there is a fireplace in the room, there should be outlets either on the mantel or in the wall for two decorative candle-lamps or wall brackets.

Dining Room: One ceiling outlet, either equipped with two circuits controlled by wall switches or one circuit controlled by two three-way wall switches, should be provided. This makes it possible to light the room either from the door to the hall or living room, as the case may be, and at the kitchen door. If this outlet is equipped with a two-circuit fixture, one circuit may provide direct light, to light the table, and the other circuit may provide general light in the room. In any case it is best for the dining room fixture to direct light on the table.

The arrangement of furniture should be decided upon and then one duplex convenience outlet should be placed near the buffet and one near the serving table. These provide connections for decorative candle-lamps on the buffet and for appliances.

There should be a convenience outlet and a buzzer outlet under the table.

Kitchen: Here there should usually be one ceiling outlet equipped with a fixture of enclosing glassware hung close to the ceiling and controlled by two three-way wall switches. One switch should be at the door to the dining room and one at the outside door.

There should be outlets over the sink and other important places. One duplex convenience outlet about three feet above the floor should be provided near the kitchen table. If an electric iron is used in the kitchen there should be provided a convenience outlet in the wall for this.

Second Floor.
Hall and Stairway: One ceiling fixture in the hall and one on the landing should be controlled by two three-way wall switches, one switch upstairs and one downstairs.

A convenience outlet will provide a connection for a decorative portable or an appliance such as the vacuum cleaner.

Bedrooms: The arrangement of the furniture must be decided upon before the wiring can be effectively laid out. One wall bracket should be located on each side of the dresser mirror and the one controlled by a wall switch at the entrance to the room. If the location of the dresser and dressing table cannot be definitely decided upon, a duplex convenience outlet should be provided in likely places. These will provide a place to connect brackets, which are attached to the dresser or portable lamp.

If the position of the dresser or the dressing table can be definitely established, a convenience outlet in the wall, near one of them and about three feet high, will be found handy for appliances.

There should be a duplex convenience outlet near the bed for a reading lamp and appliances.

A ceiling fixture may be provided and if so this should be controlled by a wall switch at the door. All closets should have some provision for lighting. Pendant pull-chain sockets are satisfactory.

Bath: Two wall brackets flanking the mirror and controlled by a wall switch at the entrance to the room provide general lighting as well as mirror lighting in the average bathroom.

One convenience outlet at the right of the lavatory and about three feet above the floor is useful for appliances.

Basement.
There should be as many ceiling outlets as there are useful spaces and work-places in the basement; that is, one at the foot of the stairs, one in the fruit or vegetable closet, one near the furnace, one in the coal bin, one over the laundry trays, one over the ironer, etc.

There should also be provided outlets for a washing machine, ironer, iron, refrigeration plant, etc.

Attic.
In the average attic two or three ceiling or pendant outlets are sufficient.

Throughout the home, electricity is essential if comfort, convenience and economy are to be considered. On the proper and adequate wiring of the home depends much of its satisfaction and enjoyment. We have barely touched the electrical aspect and have little conception of the coming uses of electricity. The life of a residence must be measured in decades. Will a well-wired residence of today be adequately wired for the coming years?

THE ELECTRICAL HOME OF TODAY

By J. F. ROCHE
But a few short years ago the electrical home meant electric lights only, with not even the convenience of switches placed at convenient locations. Instead, the lamps hung on long cords equipped with what were known as key sockets and you had to turn the light on at the lamp instead of by a switch located at the door or some other convenient location in the room.

Very few homes were equipped with what are known as lighting fixtures, or chandeliers, as they were called at that time. When the chandeliers were first placed upon the market, they were more or less ornamental and very little thought was given to efficiency so far as light was concerned.

Various improvements were made in glassware and fixtures generally, until today we have the most efficient lighting that it is practically possible to get.

The first electrical appliance that meant convenience in the home and routed the old wood, coal or gas fire which heated the kitchen and brought uncomfortable conditions, was the electric iron. So that the electric lamp and the electric iron have had more to do in the electrification of the home than any other appliances that are in today's market.

The washing machine followed the electric iron, as did the little disc stove, percolator and other appliances. They were very crude in many respects, yet quite efficient, at least so much so that they acted as educators as well as home utilities, until today the most efficient household utilities made are electrical. The greatest labor-savers in household utilities are electrical.

A list of the practical household appliances that home builders and owners can absolutely depend upon is as follows:

Starting with the kitchen—
THE ELECTRIC RANGE

The electric range, an absolutely dependable kitchen range that, because of the absence of flame and perfect control of the heat, saves all of the nutrition in the food. Does everything that any range will do, in addition, and does all of it better. No coal to carry in, no cinders or ashes to carry out, no smoke, no flame, absolute protection both in the cooking of food and in practically every other respect. Just a turn of the switch can get any desired temperature you wish.

THE ELECTRIC WASHING MACHINE, plugged into any convenience outlet wherever you wish it, gives you greater washing efficiency than it was possible to get under the old system of rubbing your things off on a washboard. The electric washer is constructed in such a way that there is no tearing of clothes such as happens in laundries, and it gives you the opportunity of having every sanitary condition from the standpoint of the kind of soap, water and operation that you need.

No other service in the world is comparable to electric service. No other service in the world is given so little thought by the public as electrical service. I believe that no other service receives as much consideration, due entirely to lack of thought on the part of the public.

It is human to complain and kick about the thing that you cannot see except in results. When the coal man dumps coal into your basement, you see the coal. You must shovel it into the furnace to get heat, you must carry out the ashes in order to get the coal to burn; in short, you would have so much trouble

with the average service that you receive that you console yourself with the thought that it has to be and that, after all, it is a wonderful thing, and yet you have so little trouble with electrical service, due to all of the inconveniences being eliminated, that you do not give it the thought you should, owing to the fact that your mind is not brought so forcibly in contact with it.

A dark town never prospered. It is looked upon as slow and out of date. There is no incentive for the outside investor to come in with his money, consequently, regardless of how many times a census is taken, each one indicates a step backward instead of forward.

A dark home is somewhat like a dark town. It shows very little consideration for those who live in it, and shows that it is the last thing to be considered when it should be the first.

A home today without modern electrical labor-saving devices—inexpensive but extremely efficient—dealing out hours of rest and recreation, instead of slavery, is comparable to a large extent with the dark home and shows how little thought is given to the very thing that creates all of our happiness—the home.

Let us do some thinking and then some acting—at least, let us give our wives the same consideration that we give ourselves and our various classes of business.

Am I right?

THE ELECTRIC IRONER works automatically and takes care of all of the larger pieces that you have to iron, which are known as flat work.

The six-pound ELECTRIC IRON to do all the regular household ironing.

THE WAFFLE IRON, PERCOLATOR, TOASTER AND GRILL to prepare breakfast right on the table.

THE ELECTRIC WAFFLE IRON

Waffles at the Table.

No walking back and forth from dining room to kitchen.

BODIOR SETS

THE CURLING IRON to make the bobbed locks look beautiful.

THE HEATING PAD for either the sick room, cold bed, cradle, toothache, or any of the other aches that apply to the human anatomy.

THE BABY MILK WARMER to keep from breaking dad's rest.

THE PORTABLE RADIANT HEAT-ER, light and efficient, can be used in any room to warm the cold spots. It is one of the most efficient as well as one of the most convenient appliances.

You will find upon investigation that all of the equipment above mentioned will cost you a very small sum of money, both as to first cost and the operation after installation. If other types of fuel didn't cost anything, electricity would still be cheaper, in view of the service it gives and that it is possible to get, owing to the fact that it is ready, at your hand, 24 hours of the day, 365 days of the year.

There isn't anything that you could buy in any locality in this country today that compares with the low price for which electricity is sold when consideration is given to the service rendered.

Think of preparing a meal without heating up your kitchen, without any wastage of food, and without any of the inconvenience that applies to the older methods of cooking. Think of the steps saved the woman in the home by being in position to prepare many of the meals right on the dining room table, of doing a full day's ironing, washing and all of the other various things as enumerated above, without fatigue and with all of the inconvenient things eliminated.

Think, as I say, of the 24-hour service, any hour of the day or night, at the turn of a switch. When your banker, your baker, your grocer, your butcher, your furniture man, and every other service that you must have in the upkeep of a home, close their places, what business at a certain hour in the evening can you open at a certain hour in the morning—only giving you part of the 24 hours in which to secure the service they offer—your electric lighting company is ever present, at 2:00 a. m. as well as 12 o'clock noon, giving you every possible service within your own doors, speeding you on your way to your office, operating your telephone and doing practically everything necessary to human life and existence.

RADIANT STOVE

Uses Any Kind of Dishes.

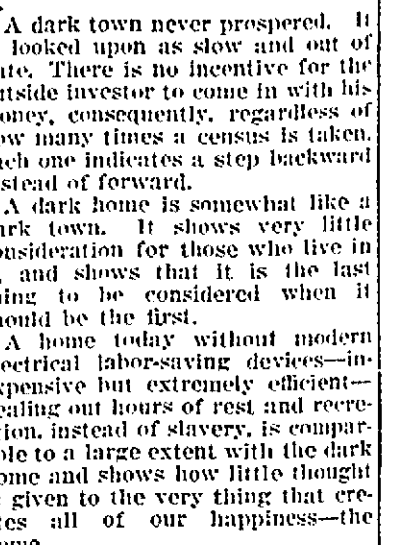

No other service in the world is comparable to electric service. No other service in the world is given so little thought by the public as electrical service. I believe that no other service receives as much consideration, due entirely to lack of thought on the part of the public.

It is human to complain and kick about the thing that you cannot see except in results. When the coal man dumps coal into your basement, you see the coal. You must shovel it into the furnace to get heat, you must carry out the ashes in order to get the coal to burn; in short, you would have so much trouble

with the average service that you receive that you console yourself with the thought that it has to be and that, after all, it is a wonderful thing, and yet you have so little trouble with electrical service, due to all of the inconveniences being eliminated, that you do not give it the thought you should, owing to the fact that your mind is not brought so forcibly in contact with it.

WHAT YOU SHOULD KNOW ABOUT REFRIGERATION

By G. J. GAFFNEY

The Refrigerator Must Be Understood.

There is no more important article of furniture in the home than the family refrigerator. No other article has such a vital duty to perform. No other article can work so much harm, or waste more money, than an inferior refrigerator. And yet the refrigerator is the most neglected part of the home equipment.

Purity and Sanitation.
These are days of pure food. The federal government and most states enforce purity and cleanliness. Sanitation is invading the home. The germ-spreading feather duster has vanished. Mops and vacuum cleaners have replaced the broom. Some kitchens are being tiled. Porcelain tables and sinks are now common.

A Forgotten Spot.
But out in the back part of the house is the spot which is most often forgotten. It is the place into which all perishable food for the family is put. We are very careful in purchasing this food to see that it is fresh and clean. Is not the safe, healthful preservation of this food after we buy it just as important as the selection of the food itself?

Yet what are the facts? In four homes out of five a refrigerator is in use which is little better than a kitchen cabinet—with the natural results—food often spoils, germs continually multiply, until the refrigerator is in such condition that it would be condemned as dangerous to the family welfare if inspected by the family physician or any health official.

The aim of refrigeration is the keeping of food fresh, wholesome and safe. The three things which are essential to this are coldness, dryness and cleanliness. So that the good refrigerator—the one you really want and should have—is the one affording absolute cleanliness, maximum coldness and dryness.

Porcelain refrigerators are made in many finishes, the best of them being subjected to a number of process treatments after having been baked in an oven of several hundred degrees. This leaves a very tough, heavy, glazed surface.

In buying such a refrigerator make sure that it is not merely a single-coated surface, but that it has several coats, each baked into the other. This makes a non-absorbent, non-rusting interior which is sanitary and easy to keep clean. The light-colored reflecting walls make it easy to examine the contents of the refrigerator.

In the best designs of refrigerators the corners are fully rounded, making it easy to keep the interior clean and sanitary. Considerable satisfaction is derived from the fact that one's food is kept in such a sanitary refrigerator.

Proper Insulation.
Not only must one think of the appearance and sanitary possibilities of the refrigerator when buying, but one must give fully as great consideration to its insulation. It must be borne in mind on the one hand that to secure the proper degree of cold it is necessary to melt the ice. Theoretically refrigerators could be made that would melt very little ice. On the other hand, this condition would probably imply a refrigerator in which the temperature, at least for the food, would be entirely too high. Why?

A circulation of air is necessary. Always remember that there are two extremes that must be considered regarding the melting of ice. On the one hand, it should not melt too rapidly, on the other, not too slowly. Roughly speaking, between 14 and 15 pounds of ice melted per day would be considered a very good average. This is assuming that the outside temperature is around 70 degrees. With hot summer weather proportionate melting would take place. The above figures are based on the assumption that you will use ice in your refrigerator.

In the case of the electric refrigerator an entirely different set of factors are to be considered. The maintenance of low temperature depends upon sufficient insulation, tightly fitting and tightly locking doors and airtight construction throughout. These features tend to keep the heat out and the cold in. Heat, like a pendulum, seeks to equalize itself. Regardless of how the wall is built, heat seeks to pass through this wall until the temperature is equal on both sides of it. To build refrigerator walls and doors that most effectively

prevent this exchange of heat and cold through the wall takes costly material and the highest grade of workmanship. The refrigerator walls will range in thickness from two inches to five inches.

Naturally those that approach the maximum thickness tend to give the purchaser the greatest assurance of good insulation. Where wood parts are used it is important that they be well seasoned and grooved.

Insulation.
Some of the best refrigerators on the market use cork as their insulating material, but owing to the fact that cork is quite expensive, the poorer grades of refrigerators use substitutes. A poorly seasoned refrigerator door soon warps and cracks, letting the heat through. A poorly insulated refrigerator door permits of a certain amount of condensation on its surface. This soon warps and cracks the door and hastens its rapid breakdown. Who has not experienced the aggravation of a refrigerator door that will not close tightly?

Dry Air Circulation.
Cleanliness and coldness, as we have explained, are essentials to proper refrigeration. So is dryness. A dry atmosphere in the refrigerator is as necessary as coldness. In a refrigerator with poor or scanty circulation the contents are always becoming damp, moist and moldy. Dryness cures all these things.

The cold air from the melting ice drops from the bottom of the refrigerator, passing through large openings in the compartment. As it passes it grows slightly warmer. It then rises, getting still warmer through contact with the food until it reaches the top of the refrigerator where it passes on back into the ice chamber and over and around the ice. Here it again becomes cold and starts on its journey once more. The process is repeated over and over again, thus forming a complete and continuous rotation of the entire atmosphere within the refrigerator. As the cold air makes the circuit of the refrigerator it takes up moisture from the food and carries it to the ice chamber where, owing to the fact that the ice is colder than the air, moisture is deposited on the ice cake or side of the brine tank (where mechanical refrigerators are used) and passes off as waste through the drain pipe. This is merely taking advantage of nature's law which states that moisture condenses upon any cold surface. In the case of the refrigerator the ice is the coldest object in the refrigerator. Therefore the condensation takes place on it, even though it may appear at first glance that the ice is already laden with moisture.

In a refrigerator having good air circulation, as a matter of fact, it should be possible to melt lettuce, butter, milk, sugar, salt and crackers in as good condition as when they were put in. Sugar, salt and crackers should come out just as crisp as when put in.

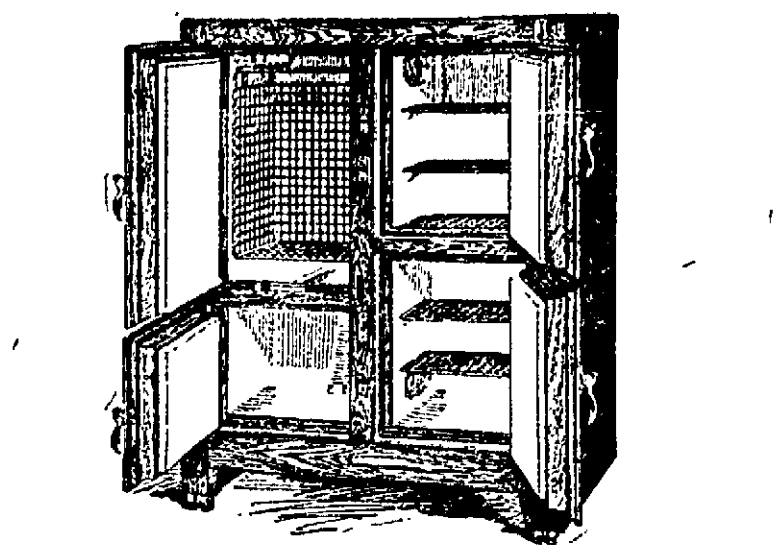

Pointers on Refrigeration.
Like the furnace the refrigerator must be fed fuel. In one case it is coal, the other ice. There is a difference, however, in what the furnace and refrigerator do for you in return for this service. Never allow the ice to get low. Left-overs and marketing should be put away in suitable containers so as to avoid spilling and spoiling. The contents of the refrigerator should be examined every day. Never allow the left-overs to reach the spoiled stage. Anything that has an objectionable odor should be removed from the refrigerator as the other foods, particularly milk and butter, will take up these odors.

The milk, especially baby's milk, butter and cream should be put in the compartment under the ice or as near the ice as possible. Leave space around each container so as to allow for a free circulation of cold air. Never under any consideration put hot or warm foods into the refrigerator. Allow them to cool before putting them in. Form the habit of closing the refrigerator door after taking out or putting in food. Always latch the door. Do not be content with merely slamming it shut.

The refrigerator should be cleaned every week with hot water and soda, remembering that in the refrigerator lies the main factor in determining the healthfulness and flavor of your food supply. If there is a baby in the family these precautions are of double importance.

WHAT YOU SHOULD KNOW ABOUT REFRIGERATION

By G. J. GAFFNEY

The Refrigerator Must Be Understood.

There is no more important article of furniture in the home than the family refrigerator. No other article has such a vital duty to perform. No other article can work so much harm, or waste more money, than an inferior refrigerator. And yet the refrigerator is the most neglected part of the home equipment.

Purity and Sanitation.
These are days of pure food. The federal government and most states enforce purity and cleanliness. Sanitation is invading the home. The germ-spreading feather duster has vanished. Mops and vacuum cleaners have replaced the broom. Some kitchens are being tiled. Porcelain tables and sinks are now common.

A Forgotten Spot.
But out in the back part of the house is the spot which is most often forgotten. It is the place into which all perishable food for the family is put. We are very careful in purchasing this food to see that it is fresh and clean. Is not the safe, healthful preservation of this food after we buy it just as important as the selection of the food itself?

Yet what are the facts? In four homes out of five a refrigerator is in use which is little better than a kitchen cabinet—with the natural results—food often spoils, germs continually multiply, until the refrigerator is in such condition that it would be condemned as dangerous to the family welfare if inspected by the family physician or any health official.

The aim of refrigeration is the keeping of food fresh, wholesome and safe. The three things which are essential to this are coldness, dryness and cleanliness. So that the good refrigerator—the one you really want and should have—is the one affording absolute cleanliness, maximum coldness and dryness.

Porcelain refrigerators are made in many finishes, the best of them being subjected to a number of process treatments after having been baked in an oven of several hundred degrees. This leaves a very tough, heavy, glazed surface.

In buying such a refrigerator make sure that it is not merely a single-coated surface, but that it has several coats, each baked into the other. This makes a non-absorbent, non-rusting interior which is sanitary and easy to keep clean. The light-colored reflecting walls make it easy to examine the contents of the refrigerator.

In the best designs of refrigerators the corners are fully rounded, making it easy to keep the interior clean and sanitary. Considerable satisfaction is derived from the fact that one's food is kept in such a sanitary refrigerator.

Proper Insulation.
Not only must one think of the appearance and sanitary possibilities of the refrigerator when buying, but one must give fully as great consideration to its insulation. It must be borne in mind on the one hand that to secure the proper degree of cold it is necessary to melt the ice. Theoretically refrigerators could be made that would melt very little ice. On the other hand, this condition would probably imply a refrigerator in which the temperature, at least for the food, would be entirely too high. Why?

A circulation of air is necessary. Always remember that there are two extremes that must be considered regarding the melting of ice. On the one hand, it should not melt too rapidly, on the other, not too slowly. Roughly speaking, between 14 and 15 pounds of ice melted per day would be considered a very good average. This is assuming that the outside temperature is around 70 degrees. With hot summer weather proportionate melting would take place. The above figures are based on the assumption that you will use ice in your refrigerator.

In the case of the electric refrigerator an entirely different set of factors are to be considered. The maintenance of low temperature depends upon sufficient insulation, tightly fitting and tightly locking doors and airtight construction throughout. These features tend to keep the heat out and the cold in. Heat, like a pendulum, seeks to equalize itself. Regardless of how the wall is built, heat seeks to pass through this wall until the temperature is equal on both sides of it. To build refrigerator walls and doors that most effectively

prevent this exchange of heat and cold through the wall takes costly material and the highest grade of workmanship. The refrigerator walls will range in thickness from two inches to five inches.

Naturally those that approach the maximum thickness tend to give the purchaser the greatest assurance of good insulation. Where wood parts are used it is important that they be well seasoned and grooved.

Insulation.
Some of the best refrigerators on the market use cork as their insulating material, but owing to the fact that cork is quite expensive, the poorer grades of refrigerators use substitutes. A poorly seasoned refrigerator door soon warps and cracks, letting the heat through. A poorly insulated refrigerator door permits of a certain amount of condensation on its surface. This soon warps and cracks the door and hastens its rapid breakdown. Who has not experienced the aggravation of a refrigerator door that will not close tightly?

Dry Air Circulation.
Cleanliness and coldness, as we have explained, are essentials to proper refrigeration. So is dryness. A dry atmosphere in the refrigerator is as necessary as coldness. In a refrigerator with poor or scanty circulation the contents are always becoming damp, moist and moldy. Dryness cures all these things.

The cold air from the melting ice drops from the bottom of the refrigerator, passing through large openings in the compartment. As it passes it grows slightly warmer. It then rises, getting still warmer through contact with the food until it reaches the top of the refrigerator where it passes on back into the ice chamber and over and around the ice. Here it again becomes cold and starts on its journey once more. The process is repeated over and over again, thus forming a complete and continuous rotation of the entire atmosphere within the refrigerator. As the cold air makes the circuit of the refrigerator it takes up moisture from the food and carries it to the ice chamber where, owing to the fact that the ice is colder than the air, moisture is deposited on the ice cake or side of the brine tank (where mechanical refrigerators are used) and passes off as waste through the drain pipe. This is merely taking advantage of nature's law which states that moisture condenses upon any cold surface. In the case of the refrigerator the ice is the coldest object in the refrigerator. Therefore the condensation takes place on it, even though it may appear at first glance that the ice is already laden with moisture.

In a refrigerator having good air circulation, as a matter of fact, it should be possible to melt lettuce, butter, milk, sugar, salt and crackers in as good condition as when they were put in. Sugar, salt and crackers should come out just as crisp as when put in.

Pointers on Refrigeration.
Like the furnace the refrigerator must be fed fuel. In one case it is coal, the other ice. There is a difference, however, in what the furnace and refrigerator do for you in return for this service. Never allow the ice to get low. Left-overs and marketing should be put away in suitable containers so as to avoid spilling and spoiling. The contents of the refrigerator should be examined every day. Never allow the left-overs to reach the spoiled stage. Anything that has an objectionable odor should be removed from the refrigerator as the other foods, particularly milk and butter, will take up these odors.

IMMERSION HEATER

ANOTHER USE FOR BUILDING BOARD

Using a Portion of Your Basement for a Vegetable Cellar.

As already covered in another article, building board makes an ideal insulating material for constructing a cold cellar for vegetables. In providing such a cold room for the vegetables, it is not necessary to use more than a portion of the cellar.

In partitioning off a portion of the cellar it is a good plan to take the northeast or northwest corner where there is no window, and after deciding the amount of space that is needed, erect 2x4 studs at intervals of one foot, leaving the width of the wallboard. The 2x4's should be arranged so that the wallboard can be attached to the two-inch faces, making a double wall, and leaving a four-inch space between walls.

By doing this a dead-air space is provided for between the two-wall surfaces which effectively maintains a low temperature in the vegetable room. A thermometer should be placed in this room within plain sight and an electric light globe hung so that it can be reached as soon as you enter the doorway.

A fresh-air intake should be provided near the ceiling of the room so that fresh air can be taken from outdoors. A foul-air outlet should also be provided, but in this case a tube should be constructed to run from the foul-air exhaust opening down to the floor, leaving an opening near the floor. This can be constructed by erecting two 2x4's about twelve inches apart next to the outside wall, and tacking wallboard to the two-inch faces, leaving an opening at the top to exhaust outdoors through an opening in the side of the house. Both the fresh-air intake and the foul-air outlet should be provided with copper screening and trap doors. The trap doors can be opened by means of cords.

As many shelves as needed can be erected, also bins for the vegetables. The bins should be elevated from the floor about four inches by standing 2x4's on edge.

The enclosed porch or solarium handled in perfect harmony with the surroundings, it becomes a part and parcel of the room, and in so doing, by its very harmony, suggests that it was the only material which could have been used.

THE ENCLOSED PORCH FEATURE

GREAT SOURCE OF ENJOYMENT IN THE WINTER AS WELL AS THE SUMMER

A Delightful Gathering Place for the Family and Friends on a Hot Summer's Day or Evening.

The enclosed porch or solarium has decided advantages over the old-fashioned, open porch. The porch is coming to be considered more and more as an integral part of the house and not an afterthought. Screened in for summer and glassed in for winter, it makes an ideal retreat any time of the year.

What contrasting pictures are presented when we stop to realize that only a few years ago the family gathered on the front porch to sit out, with varying degrees of discomfort, the hot summer's evening, each with his palm leaf fan and stick of punk. On the other hand the enclosed porch, furnished with its light and airy furniture, allows each member of the household to pursue his individual hobby unmolested by mosquitoes.

Reed or wicker furniture seems to be particularly suitable for the porch and solarium, especially so if a liberal quantity of cushions is provided. There is a delightful informality about the enclosed porch. After a hard day's work what could be more soothing to the tired nerves than to be surrounded by one's friends and to feel the evening slipping toward bedtime to the accompaniment of the music of the insects and the sweet smells of night? Can you imagine a more soothing prelude to sleep?

An Evening's Enjoyment.
Modern invention and science have now made possible the enjoyment of music in any part of the house. The phonograph or radio can be set back in the corner of the enclosed porch and refreshment can be served from the tea wagon. A cluster receptacle served on the under side of the wagon makes simple the preparation of a light evening meal, such as tea, coffee or chafing-dish delicacies. What could be more inviting than such an environment to the accompaniment of the phonograph or radio and tinkling glasses?

In the daytime the enclosed porch has very practical uses. Awnings can be let down on the sunny side of the porch and the electric sewing machine and fan moved out so that the housewife may sew with maximum comfort. Many women do their ironing in the screened-in solarium. The operator is free from the excessive heat of the kitchen and the electric iron can be carried any place where there is a convenient outlet.

The electric fan does its bit toward making summertime more endurable. Installed at one end of the porch, particularly if it is the oscillating type of fan, it will keep the air of the entire porch in a gen-

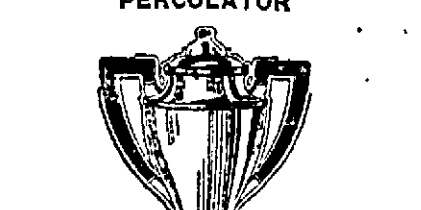

eral circulation. There was a time when a trip to the lake, seashore or mountains in the summer time was the only relief. Now the fun makes everyone's home as comfortable as the seashore. Most people do not get more than a fraction of the possible comfort from their fan. This is owing to lack of appreciation of the value of the fan. Also to the fact that in constructing their homes they have not planned for sufficient outlets to make the use of the portable fan a practical affair.

PERCOLATOR

USE OF LINOLEUM IN THE HOME

the circulation. There was a time when a trip to the lake, seashore or mountains in the summer time was the only relief. Now the fun makes everyone's home as comfortable as the seashore. Most people do not get more than a fraction of the possible comfort from their fan. This is owing to lack of appreciation of the value of the fan. Also to the fact that in constructing their homes they have not planned for sufficient outlets to make the use of the portable fan a practical affair.

PERCOLATOR

USE OF LINOLEUM IN THE HOME

Linoleum Makes an Ideal Decorative Floor Covering, Especially if Laid Properly and Waxed.

It is really astonishing to know the degree to which linoleum is coming to be used. This may come as a shock to many people who have looked upon linoleum as a floor covering for the kitchen only. It is owing to the development of the beautiful patterns and designs which are used in the making of modern linoleum that make their use in other rooms of the house desirable.

It is highly preferable floor covering because of the ease with which it can be kept clean and the fact that it does not readily stain. Europe has used this material for many years, considering it a sort of false flooring, on top of which the rugs can be placed. It may seem strange, with our American ideas, to learn that our American linoleum manufacturers have waxed—then covered with rugs. Thus treated, they mingle with the most polite of French society.

For the summer cottage, the solarium and the porch, this floor surface is particularly desirable. An indiscriminate use of linoleum is not advocated. Rather, it should be studied and made to adapt itself to the decorative and color schemes of the home. It would not do at all to put linoleum in a room in which the color scheme and pattern of the linoleum is out of harmony, for by so doing, undue attention would be called to the linoleum as a discordant element. This would tend to cheapen the impression of the linoleum.

It is in these days of the servant-less homes, especially if there are any children in the home, running indoors and out as they do, that linoleum has come into its own. The

Help Postmaster Decide On Holiday For Carriers

Whether Appleton city letter carriers are to share in the privilege of Saturday half-holidays such as is enjoyed by a large number of employees, will be decided in the next few days by the postal patrons themselves.

On the accompanying ballot patrons may signify their opinion in the matter. The ballots when marked should be mailed either to the Post-Crescent or to the Appleton postmaster.

Postmaster William H. Zuehlke has been notified by the postal department that half-holidays may be given to carriers during the summer if the arrangement entails no expense or serious curtailment of service. Mr. Zuehlke prefers to have the patrons settle

this question themselves and hopes that as large a number of persons will make use of the opportunity and vote.

The city hall and courthouse offices now are closed every Saturday afternoon throughout the year, and a large number of other offices and business establishments are closed Saturday afternoons during the summer months. Postoffices in several cities of Wisconsin cities are now giving summer Saturday half-holidays to the carriers following a favorable vote by the patrons.

If Appleton residents favor the arrangement, there will be no Saturday afternoon deliveries between June and Sept. 1.

O. R. C. ORGANIZES DISTRICT GROUP

By Associated Press

Oshkosh—Organization of a district group of the Officers Reserve Corps was effected at a meeting of 100 representatives from various parts of the state Thursday evening. Warning against pacifism was given by the speakers, including Colonel C. Green, Milwaukee; General C. R. Boardman and Colonel H. L. Wood, Oshkosh; F. Ryan Duffy Fond du Lac; Colonel Arthur Johnson, Chicago, and Major Albert Tucker, Appleton.

Selection of the name was left to a later meeting. The next session will be at Fond du Lac in October. Officers named were: President Major Robert P. Boardman, Oshkosh; vice president Major D. G. Moon, Marinette; second vice president, Lieutenant A. J. Pullen, Fond du Lac; third vice president, Lieutenant Herbert Roska, Sheboygan; secretary, treasurer Captain Clarence A. Loscher, Menasha.

Mr. and Mrs. Robert Hildebrandt and Mrs. John Eick were Green Bay visitors Friday.

Miss Adeline Winter and Mrs. Mildred Cochran, both of Chicago, are visiting at the home of their parents, Mr. and Mrs. R. Winter, State-st.

Quality Dry Goods

GEENEN'S SPECIAL SERVICES TO THE HOME FURNISHER

are as important in furnishing the home as the advice and help of a competent contractor is in the building of it.

- Measuring for rugs, linoleum, draperies and shades.
- Making draperies expertly.
- Cutting and planning carpets and linoleums.
- Laying carpets and linoleums.
- Putting up draperies, rods, shades.

And all of these supplemented by suggestions and ideas and practical demonstrations in color harmony with the actual goods — by men and women fully competent to serve you in a most satisfactory manner.

Many of these helpful services are part of our service to customers here in this store. Those of making and hanging, carry only a nominal hour charge, much smaller than the high quality of workmanship really would warrant.

Things That Change the Four Walls and Rooms of
a House Into a Cozy Home — A Better Home

Fire Destroys Property, Human Life and Treasures More Precious than Gold

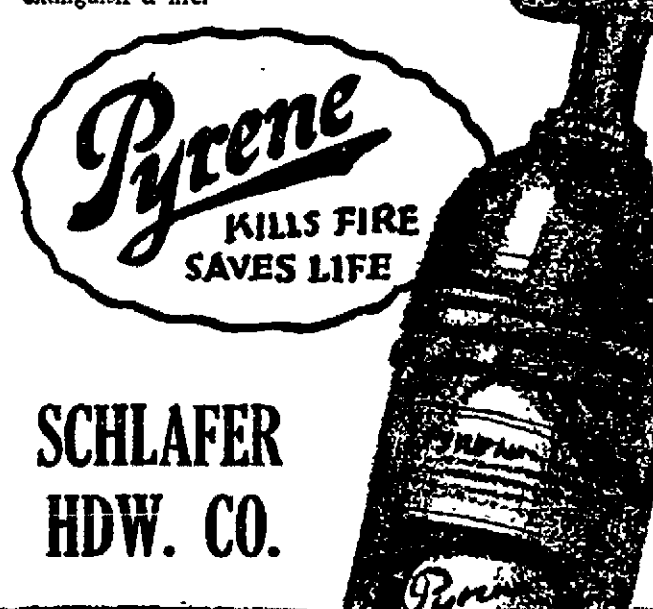

If life is lost by fire there is no restitution. Then there are other things one may lose by fire which will take a great deal out of life.

Many things in our homes are dear through association—furniture, portraits and other heirlooms from preceding generations; gifts that came as wedding presents or on anniversary days. They can never be replaced, and with their loss something goes out of our lives.

When fire starts in your home be protected by having a sufficient number of Pyrene Fire Extinguishers, so that you will have one near and be able to put it out before it gains headway.

Pyrene was THE GREAT IDEA that saved the model home from destruction by fire.

The ease and simplicity of operation make Pyrene the ideal protection for the home where a woman or young child may have to extinguish a fire.

WINTER HERE; SOUTH CUTTING ITS GRAIN

Appleton postal patrons were started Friday by a poster in the postoffice advertising for help for the western harvest fields. Although farmers are worrying how to get their grain seeded in this spring, harvesters in the west, particularly the southwest, are calling for help. The season will open in Texas about June 20, but in some parts as early as June 1. In Oklahoma, Kansas and Nebraska, it will open between July 1 and July 10, in South Dakota about July 20, in North Dakota about Aug. 1 and in Montana about August 10. Harvest hands must pay their own transportation to and from the harvest fields. Employment can be secured through the federal-state employment offices in St. Louis and Chicago.

BUILDING PERMITS

Three permits for minor building operations were issued by George E. Peotter, city building inspector, on Friday, as follows:

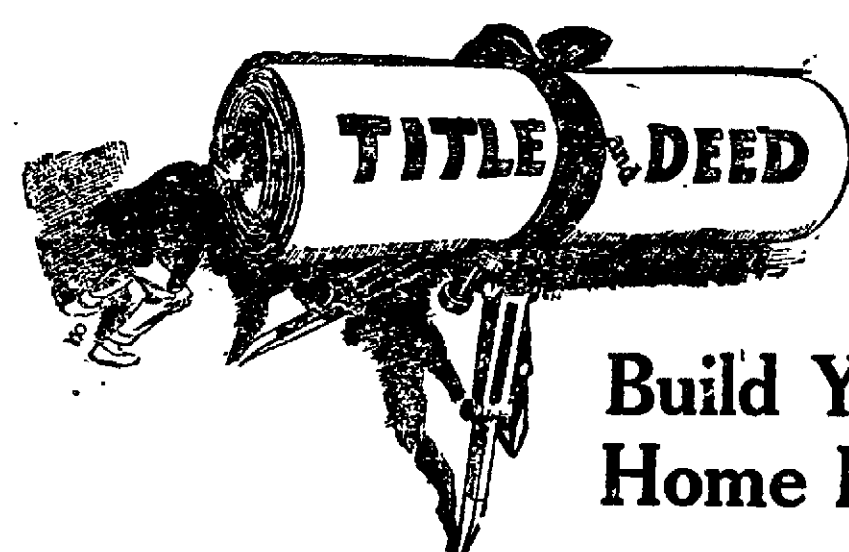

Mrs. Minnie Van Rossum, 655 Fair-st., to remodel porch and bathroom.

Mrs. Thomas O'Keefe, 387 Locust, to remodel building and build basement.

Gus Klipstein, 772 Hancock-st., to build a garage.

BEG PARDON

Mrs. Elizabeth Turkow states that her name does not head the list of petitioners asking the city council to declare the planing mill of Martin Boldt & Sons at State-st. and the Chicago and Northwestern railway tracks a violation of the city zoning ordinance. Investigation reveals that although action against Martin Boldt & Sons was commenced in the name of Mrs. Elizabeth Turkow et al, the present petition does not contain her name but the name of her husband, Martin Turkow.

None Should Have Fear Of Motherhood

Greatest Happiness of Women Is Having and Rearing Children

BY MARIAN HALE

Despite feminism, women's interest in politics, business and professional life, the time is coming when women will rightfully think of motherhood as the greatest source of happiness and the most enriching experience a woman can have.

This is the belief of Carolyn Conant Van Blarcom, R. N., who through her scientific study and her teaching at the Johns Hopkins Hospital Training School for Nurses and her surveys here and in Europe, has become an international authority on maternity and baby welfare.

She is one of the few Americans invited to attend the Conference on Infant Welfare to be held in London in July under the patronage of the king and queen.

"The reluctance on the part of the modern young woman to undertake what should be the joyous responsibilities of motherhood is based largely on fear which is an outgrowth of superstition," she says, "and this fear must be dispelled by knowledge."

"As soon as a woman finds she is to be a mother she should consult a physician. Statistics prove that a large proportion of the perils which may lead to loss of life or invalidism may easily be prevented and corrected in the early stages of the new life's development."

"The theory of invalidism in connection with prospective motherhood is groundless and has been long exploded. There is no reason why the average woman should not feel strong, buoyant and happy during the months in which she expects her child."

She points out that many women did not achieve the top-notch of fame until several children had been born to them. Madame Schumann-Heink, the mother of 10, is an outstanding example, as well as Louise Homer, Alma Gluck, Mary Roberts Rinehart, Ethel Barrymore, Madame Curie and others.

"Women are learning, however," she concluded, "that they really can have a great deal of fun and express themselves to their highest satisfaction in bringing up their children. It is a scientific pursuit. A happy, safeguarded childhood means a healthy, contented life. People are beginning to recognize the intelligence and quick understanding of children, and parents are broadening their experience to be interesting to their children."

Adventures Of The Twins

THE LITTLE GREEN MAN

Down the beanstalk came the Twins from Beanstalk Land. Not like Jack had done the time the giant chased him, but slowly and carefully, reaching down with their toes to find safe places to put their feet.

Suddenly one of the big beans opened and out came a little green man.

"Hello," he nodded pleasantly. "Can't you come in a minute?"

And then the Twins saw that the big green bean pod was really a little house, windows, door and all.

"Do you live here?" asked Nancy. "We didn't see your house when we were going up. Were you here all the time?"

"Yes," said the little man. "But it was not intended that you should see me then. I'm the Beanstalk Fairy and I can make myself invisible whenever I wish. The Fairy Queen told me you were going to Beanstalk Land, and I asked me to go with you to see that you were not in any danger."

"But where were you?" asked Nick. "Where did you 'go yourself'?"

"Come in and I'll tell you all about it," invited the green man.

So the Twins went into the queer little house and sat down.

"I was right beside you on all your adventures in Beanstalk Land," said their host. "When you fell out of the Dutch giant's pocket, it was I who guided you so that you fell safely on to Snap's back."

"And when Snap chased the rabbit, I caused you to fall on the sun."

Good Manners

OFFERS HIS ARM

To an old lady or an invalid a gentleman offers his arm if either of them wants his support. Otherwise a lady no longer leans upon a gentleman in the daytime.

Baby's Health

U. S. Department of Labor, Children's Bureau

BREAST FEEDING

The food necessary for the normal, healthy development of every infant mammal, including the human species, is created for it in the breast of its mother. The milk of each animal is different from that of every other, and each is especially adapted to the needs of the young of that species.

The first year of life is the year of greatest growth and development. The baby must adapt himself to entirely new conditions. All his organs must learn to function. The way a baby is fed during this period either helps him to live and to become strong and healthy, or makes his growth and development much more difficult. Breast feeding helps him more than any other one thing.

Breast feeding provides the substances exactly adapted to produce normal growth and development, besides being the cheapest and most convenient way to nourish a baby. There is no food "just as good" as mother's milk. Mother's milk prevents certain diseases and protects the baby from others.

The death rate of infants who are breast fed for the first months of life is much lower than among babies who are artificially fed during this period. If every mother realized how precious the first months after birth are to her infant, and how great a protection breast feeding is, few babies would be artificially fed, and, as a result, the number of infant deaths would be greatly lessened.

Practically every mother with proper instruction as to the care of her own health, can nurse her baby and thus provide him the food exactly adapted to his needs. Only protracted maternal illness of an infectious nature should prevent her from nursing her baby.

BREAST MILK

The first secretion of the breasts, called "colostrum" is a thick, yellowish fluid which is adopted to the first needs of the baby. It is important to put the baby to the breast at regular intervals, as this stimulates the production of true milk.

Colostrum changes gradually into true milk, which is thinner and bluer. Usually the milk flow is well established after a week.

As the child grows the amount of milk secreted gradually increases in response to his demands. At the beginning of a nursing some milk is in the breast, but most of it is actually formed during the act of nursing. The quantity which the baby contains at a feeding depends largely on the vigor, strength, and persistence with which the infant sucks. Emptying the breast completely by regular nursing helps more than anything else to produce the milk.

The amount and quality of milk produced depends not only upon the demands of the baby, but also on the diet and hygiene of the mother.

The length of the period during which the mother produces milk varies considerably. Women of certain races nurse their babies much longer than others; also, circumstances may lengthen or shorten this period. Many women can nurse their babies at least a year but the average infant usually needs additional food after the sixth month, although if gaining satisfactorily this may not be necessary before the eighth or ninth month.

To The Mothers of Appleton

If any mother with a baby under one year of age has not received a copy of that beautiful and authoritative book, "Baby's Health" call upon the Appleton Post-Crescent, or any members in Appleton of the Baby's Health Association and a copy will be given free.

FASHION HINTS

COLORED SHOES

There are many colored shoes seen this season—not in the brilliant tones of last season, but in dull greens, reds and blues. They usually match the frock with which they are worn and there is nothing conspicuous about them.

SCARF STYLES

There are many variations of the scarf this season but one of the most interesting is buttoned across the bateau neckline of a linen coat.

bornet of the giant farmer's wife. When you fell into the milk pail, I made her think you were flies and fish you out. I told the aunt to come along and carry you away, and when you climbed the rose bush, I helped you up. When you fell off the dinner table later, I caused you to drop into the giant woman's thimble, and then into the seven-league boots. I led you to the cornfield and helped to discover the king's treasure, and rescue you from drowning in the drain when the king's cat left you there."

"Oh, I'm sure we are ever and ever and ever so much obliged," said Nancy. "We often wondered why nothing ever happened to us, but we thought it was our magic green shoes."

"They helped, too!" said the little man, "but one cannot be too safe in a country where everything is so big and you are so little. Have you had a nice time?"

"Splendid," said Nick. "Were you with us when the fiddler fooled the people at the fair and pretended that his fiddle was bewitched?"

"Yes," nodded the little man, "and as it wasn't the truth he was telling exactly, it was I who made him give all the money away to the poor on his way home."

"Besides that, it was I who made you go to the palace and tell the king and queen to mend their ways. Beanstalk Land is a much better place since you visited it. Here is a letter for the Fairy Queen telling her all about it. Give my love to Silver Wings and Nimble Toes and Twinkle Pen and the Fairy Queen herself."

"Goodbye," cried the Twins, taking the letter and starting down the beanstalk.

"Goodbye!" called the little man.

The Tangle

LETTER FROM LESLIE PRESCOTT TO LESLIE PRESCOTT, CARE OF THE SECRET DRAWER

At last I am home again, dear Leslie-Marquise, and I really think the annoying pearls are off the books of my troubles at last. I am going to send a check for

six thousand dollars, which remained after Ruth paid the blackmailer, to Struble & Struble tomorrow.

Ruth made a very good deal with that waiter, I do not think I could ever have done it. She told me she really felt sorry for him.

"He broke down and cried, Les-

lie," she said, "when I gave him the money."

"I don't really want to take this, lady, but honestly if I don't my wife and baby will starve to death," he muttered brokenly.

You see, little Marquise, his wife is very ill and they have a new baby. He had been let out of the restaurant and did not know which way to turn when he picked up the pearl. He seemed to sense that there was something wrong about it all when

Jack insisted that the pearls were not real, for having seen a great many around the necks of rich patrons at smart restaurants he knew that either Jack was lying or else I had lied to him.

Sometimes, little Marquise, I think we are headed toward a great upheaval. The poor are suspicious of us always, suspicious and envious, and we do not try to understand their points of view or sympathize with their troubles.

Ruth told me the man seemed to feel that, because I was wearing all

those expensive jewels about my neck, I must be rolling in wealth.

He resented the fact that one woman could wear a string of beads worth thousands of dollars while another woman, and that woman his wife, was really suffering for food that would keep her body and soul together.

Perhaps, now little Marquise, you will understand this, as your fair head was among those that fell into the gory basket that the guillotine filled day after day.

"The man said to me," quoted

Ruth, "that you, Leslie, were probably one of the unseeing, unthinking woman that his grandfather used to talk about. The man was French and his grandfather lived in Paris during the Revolution."

I suppose the man thought I was another Marie Antoinette who would answer if someone said he had no bread. "If you can't get bread, why do you not eat cake?"

Probably you remember all that, little Marquise.

I expect I am meandering on like this because I do not want to come

to the real thing I have got to tell you and that is the awful quarrel that Jack and I had the first night I got home from New York.

He was suspiciously polite to me until after dinner and then without any preface said, "I do not want you ever to speak to Ruth Ellington again."

"And why not pray?" I answered. (Copyright 1924, NEA Service, Inc.)

TOMORROW: The letter, continued—A tangle over Ruth.

LEGAL NOTICES

terial to build a frame addition to the old pumping station of the Appleton Water Department, according to specifications on file at the filtration plant.

A certified check for five per cent of the bid must accompany each and every bid. The Commission reserves the right to reject any or all bids.

Signed: ALFRED C. BOSSER, COMMISSIONER, Fred R. Morris, Asst. Sec'y.

Dated, Appleton, Wis., May 22, 1924. May 22-24-27, 1924.

STATE OF WISCONSIN, County Court, Outagamie County.

In the matter of the estate of John H. Vandenberg, deceased—in Probate.

Pursuant to the order made in this matter by the county court for Outagamie County, on the seventeenth day of May, 1924.

Notice is hereby given that at a special term of said court to be held at the court house in the city of Appleton, in said county, on the second Tuesday, being the 17th day of June, 1924, at the opening of the court on that day, or as soon thereafter as the same can be, will be heard and considered the petition of Theodore Blohm for proof and probate of the alleged will and testamentary of John H. Vandenberg late of the city of Appleton in said county deceased, and for letters testamentary, or letters of administration with said will annexed, to be issued to Theodore Blohm and Maria DeCastor, and

Notice is hereby also given that all claims for allowance against said deceased must be presented to said court on or before the thirtieth day of September, 1924 which is the time limited by the order of the court on that day, or as soon thereafter as the same can be, will be heard and considered the petition of Theodore Blohm for proof and probate of the alleged will and testamentary of John H. Vandenberg late of the city of Appleton in said county deceased, and for letters testamentary, or letters of administration with said will annexed, to be issued to Theodore Blohm and Maria DeCastor, and

Notice is hereby also given that at a regular term of said court to be held at the court house aforesaid, on the first Tuesday, being the 17th day of October, 1924, at the opening of the court on that day, or as soon thereafter as the same can be, will be heard, examined and adjusted all claims against said deceased then presented to the court.

Provided, that all claims for necessary funeral expenses, expenses for the last sickness of said deceased and for debts having a preference under the Laws of the United States, which shall have been presented to said court within sixty days from the date of said order, will be heard, examined and adjusted at a special term of said court to be held at the court house aforesaid, on the first Tuesday, being the 17th day of October, 1924, at the opening of the court on that day, or as soon thereafter as the same can be, will be heard, examined and adjusted all claims against said deceased then presented to the court.

Dated May 17th, A. D. 1924.

By order of the Court: FRED V. HEINEMANN, County Judge.

ROONEY & GROGAN, Attorneys for the Executor. May 17-24-31.

SEALED BIDS

sealed bids will be received by the undersigned up to 4:00 P. M., June 4, 1924, for furnishing all labor and material for putting in laterals and side connections from main sewer to curb line in Lemmish-st. between Pacific-st and Second-ave.

Said work to be done under directions of the Board of Public Works. A certified check for the sum of \$25.00 must accompany each bid.

Council reserves the right to reject any or all bids.

Dated this 22nd day of May, 1924.

BY ORDER OF COMMON COUNCIL

E. L. Williams, City Clerk. May 23-24-29-31.

In the matter of the condemnation of a parcel of private property in the village of Kimberly, Wis., owned by Martin Williams et al, for street purposes and uses.

NOTICE IS HEREBY GIVEN, that the assessment of benefits and damages in the above matter has been made and same will be open for review and correction, at the office of D. P. Steinberg, No. 842 College Avenue, Appleton, Wis., on the 16, 17, 18, 19, 20, 21, 22, 23, 24, 25 and 26 days of June, 1924, from two o'clock until five o'clock, P. M. of each of said days, and all objections to such assessment and all persons interested in said review and correction thereof will be heard and considered at said place and times, by the undersigned Commissioners.

Dated, May 24th, 1924.

D. P. STEINBERG, D. E. LAUGHIN, GUS W. RISPFAU, Commissioners.

May 24, June 4.

STATE OF WISCONSIN, County Court for Outagamie County—in Probate.

Notice is hereby given that at a regular term of the County Court to be held in and for said County, at the Court House in the City of Appleton, in said County, on the third Tuesday, being the seventeenth day of June, A. D. 1924, at 10 o'clock A. M., the following matter will be heard and considered:

The application of Myrtle L. Molberg, administratrix of the estate of Charles F. Molberg, late of said County, deceased, for the examination of her final account, the examination and determination of the inheritance tax due from said estate and the assignment of the residue of the estate of said deceased to the persons named in the will of said deceased.

Dated, Appleton, Wis., May 24, 1924.

By order of the Court: FRED V. HEINEMANN, County Judge.

ALFRED C. BOSSER, Appleton, Wisconsin. Attorney for Administratrix. May 24-31, June 7.

STATE OF WISCONSIN, County Court, Outagamie County.

In the matter of the estate of Anna Vosbeck, deceased—in Probate.

Pursuant to the order made in this matter by the county court for Outagamie County on the 24th day of May, 1924.

Notice is hereby given that at a special term of said court to be held at the court house in the city of Appleton in said county, on the 3rd Tuesday, being the 17th day of June, 1924, at the opening of the court on that day, or as soon thereafter as the same can be, will be heard and considered the petition of Anna Vosbeck late of the city of Appleton in said county deceased, and for letters testamentary, or letters of administration with said will annexed, to be issued to Anna Vosbeck and

Notice is hereby also given that all claims for allowance against said deceased must be presented to said court on or before the 30th day of September, 1924, which is the time limited therefore, or be forever barred, and

Notice is hereby also given that at a regular term of said court to be held at the court house aforesaid, on the first Tuesday, being the 17th day of October, 1924, at the opening of the court on that day, or as soon thereafter as the same can be, will be heard, examined and adjusted all claims against said deceased then presented to the court.

Provided, that all claims for necessary funeral expenses, expenses for the last sickness of said deceased and

for debts having a preference under the Laws of the United States, which shall have been presented to said court within sixty days from the date of said order, will be heard, examined and adjusted at a regular term of said court to be held at the court house aforesaid, on the 1st Tuesday, being the 17th day of October, 1924, at the opening of the court on that day, or as soon thereafter as the same can be, will be heard, examined and adjusted all claims against said deceased then presented to the court.

Dated May 24, 1924.

By order of the Court: FRED V. HEINEMANN, County Judge.

THEODORE BERG, Attorney for the Executor. May 24-31, June 7.

STATE OF WISCONSIN, County Court, Outagamie County.

In the matter of the estate of Alfred Galpin, deceased—in Probate.

Pursuant to the order made in this matter by the county court for Outagamie County on the 24th day of May, 1924.

Notice is hereby given that at a special term of said court to be held at the court house in the city of Appleton in said county, on the third Tuesday, being the seventeenth day of June, 1924, at the opening of the court on that day, or as soon thereafter as the same can be, will be heard and considered the petition of First Trust Company of Appleton, Wisconsin, for proof and probate of the alleged will and testament of Alfred Galpin, late of the city of Appleton in said county deceased, and for letters testamentary, or letters of administration with said will annexed, to be issued to First Trust Company of Appleton, Wisconsin, and

Notice is hereby also given that all claims for allowance against said deceased must be presented to said court on or before the fourth day of October, 1924, which is the time limited therefore, or be forever barred, and

Notice is hereby also given that at a regular term of said court to be held at the court house aforesaid, on the first Tuesday, being the 17th day of October, 1924, at the opening of the court on that day, or as soon thereafter as the same can be, will be heard, examined and adjusted all claims against said deceased then presented to the court.

Provided, that all claims for necessary funeral expenses, expenses for the last sickness of said deceased and for debts having a preference under the Laws of the United States, which shall have been presented to said court within sixty days from the date of said order, will be heard, examined and adjusted at a special term of said court to be held at the court house aforesaid, on the first Tuesday, being the 17th day of October, 1924, at the opening of the court on that day, or as soon thereafter as the same can be, will be heard, examined and adjusted all claims against said deceased then presented to the court.

Dated May 24, 1924.

By order of the Court: FRED V. HEINEMANN, County Judge.

BRADFORD & BRADFORD, Attorneys for the Executor. May 24-31, June 7.

STATE OF WISCONSIN, County Court for Outagamie County.

In the matter of the estate of Emro Ziegler, deceased.

Notice is hereby given, that at a special term of the county court to be held in said county at the court house in the city of Appleton in said county on the first Tuesday, being the 17th day of July, A. D. 1924, at the opening of the court on that day, or as soon thereafter as the same can be, will be heard and considered the petition of Fred A. Ziegler as the administrator of the estate of Emro Ziegler late of the town of Grand Chute in said county, deceased, for the examination and allowance of his final account (which account is now on file in said court) and for the allowance of debts, claims and other items, paid in good faith without having been first filed, approved or allowed by the court, as required by law, and for the assignment of the residue of the estate of said deceased to such persons as are by law entitled therefor and for the determination and adjudication of the inheritance tax, if any, payable in said estate.

Dated May 23, 1924.

By the Court: FRED V. HEINEMANN, County Judge.

ALBERT H. KRUGMEIER, Atty. May 24-31, June 7.

THREE TOURIST PARTIES CAMP HERE FRIDAY NIGHT

In spite of drizzling weather, Allen park Friday evening furnished accommodations for three automobile parties. One group had come from California and was bound for Green Bay. One of the party was familiar with the cities on the route and intends to see the changes that have taken place near here within the last 12 years. A second party hailed from Minnesota. Two couples traveling in a camp wagon made up the third group. They were from Sheboygan and were demonstrating a new kind of automobile reflector. A fourth party found it a little too wet and cold at the tourist park and therefore went to a hotel.

FATHER RIPP WILL SPEAK TO BEAR CREEK STUDENTS

The baccalaureate sermon to the senior class of the high school at Bear Creek is to be delivered at 8 o'clock Sunday evening at Armstrong hall, Bear Creek, by the Rev. C. Ripp, pastor of St. Mary's church there. Class day exercises of the school will take place Wednesday night and the commencement will be on Friday evening of next week.

BOY JUMPS OFF WAGON INTO PATH OF TRUCK

While crossing a street from a wagon on which he had caught a ride, Robert Marx, 11, who lives with his parents at 1076 Elsie-st., was struck down by a delivery truck of Hopfensperger Bros. meat market Saturday. The accident occurred at Richmond and Elsie-sts at about 11:30. Aside from suffering a nervous shock and a cut on the side of the right eye, the boy was not injured. The police ambulance was called, but the boy was able to walk home unaided.

Seek Choral Singers

All who wish to sing in the community chorus on Memorial day have been asked to meet at 4:15 Sunday afternoon in Lawrence Memorial chapel. The chorus will sing at Memorial day services. Mrs. E. E. Dunn is directing the musical numbers.

DEATHS

MRS. THOMAS PATTON

Mrs. Thomas Patton, 40, died at 10 o'clock Friday evening at her home, 904 Metoxen-st, Kaukauna. She had

Camp At Lake

A group of camp fire girls from Hortonville are the first to use Happy Hut for a week's camping this season. The group went out to the cottage on Friday.

JOSEPH

RENDERING PLANT TO USE GARBAGE IS URGED ON CITY

Council Committee Discusses
Two Plans for Disposing
of Garbage

Disposal of garbage was discussed for nearly two hours Thursday evening by a special committee of the common council composed of Aldermen Mike Steinhauer, chairman, Herman Booke, George Richards, J. F. Tappen, Jerry Callahan and Wenzel Hunsmann, but no decision was reached.

Two plans were considered, one by a process of rendering from which the city would receive returns by selling fertilizer and grease, and the other by incineration. Either process would require a considerable investment.

William Leabbs appeared before the committee and discussed the former process, which he recommended. He represents an invention for this process and emphasized the advantages to be gained because of financial returns and said there was always a demand for the fertilizer and grease, particularly the former.

While the plant is equipped for a different process of rendering he said if members of the committee would send out about one and one-half tons of garbage to the Wisconsin Rendering company's plant, permission for which has been granted by the owners, he will render it for them and invited them to see how the work is done.

SUPPLY CAMPSITE WITH LITERATURE ON RESORTS

Tourists who stop at Albia park campsite this summer will receive help from George Merkel, caretaker, in choosing the places in the northern part of the state where they will spend their vacations.

A quantity of literature describing the northern lakes and woods in general and folders from various camps and resorts has been given Mr. Merkel by the chamber of commerce. These data were received from Wisconsin, The Lank o' Lakes, Inc. for distribution here.

HONOR DEAD, BLAINE URGES IN MESSAGE

Governor Urges People to Give
Thanksgiving for National
Ideals

Madison — Governor Blaine Saturday issued a proclamation calling upon citizens of the state to celebrate Memorial day, May 30, as a day of "thanksgiving for national ideals."

The urged patriotic celebrations throughout the state. The proclamation in part follows: "On this anniversary, we do not celebrate any great victory or any other notable event in the nation's history. It commemorates no particular general or statesman. It is a day when equal honors are paid to the private and to the commander."

"It takes the place in the nation's mind in the list of public anniversaries—Christmas, Independence Day and Thanksgiving. On Christmas we celebrate the unfettering of the souls of humanity and the unfolding of a new vision of the destiny of man. Independence day celebrates the birth of liberty and freedom. Thanksgiving day is a day of devotion and gratitude."

"Ever since 1863, Memorial Day has been set apart for ceremonies in honor of our soldier dead. We hold services in their memory, visit their graves and garland their resting places with flowers. Both dead and living are honored—those who fell on lonely battlefields and those who returned."

"Therefore, Memorial day should be one of thanksgiving for our spiritual life and our national ideals, and we treasure in our hearts the beauty and inspiration derived from the proper observance of this national holiday."

"Therefore, I, John J. Blaine, Governor of Wisconsin, hereby designate Friday, May 30, as Memorial Day and urge all citizens to properly observe this day and join with patriotic organizations in a fitting celebration and commemoration."

TRAIN HITS CAR BUT NO ONE IS INJURED

A Ford touring car occupied by Mrs. James Henry and son Lucien, Marie Morse and Donald Bink was struck by a gravel train on the Soo line shortly after 4 o'clock Friday afternoon at the Mansfield crossing at Nichols. The car was badly damaged but did not go over and no one was injured.

Appleton is growing in great shape and any property you buy will make you money. Especially in vicinity of Randall Park. Come out tomorrow and see Real Bargains. C. B. Tift, Realtor.

FLOWER "THIEVES" WERE BOYS SEEKING BOUQUET FOR TEACHER

The tulip thieves who despoiled some of the flower gardens of Sixth ward residents several nights ago proved to be two boys of about 10 and 12 years. When taken to the police station, they confessed and explained that they wanted to pick some bouquets for their teacher. The owners of the flower gardens were satisfied with the promise of the boys not to steal again.

FOUR GRADUATE FROM DALE GRADED SCHOOL

Commencement exercises of the Dale graded school were held at the schoolhouse on Thursday evening. The graduates are Amanda Leppia, William Blue, Pearl Hauk and Willis Dezel.

The class motto was "Grit Wins." The class colors are purple and gold and the class flower, the white carnation.

Five pupils were given honorable mention for being neither absent nor tardy during the entire school year. They are Bertha Hauk, Earl Nelson, William Blue, Gertrude Price and Junior Blue. Diplomas were presented to the graduates by F. R. O'Hanlon, principal of the school.

The remainder of the program: Vocal Trio—"Where Monahan's Waters Play," by Charles Cornelius, Walter Grossman and Nyl Nelson. Recitation—"What I Live For," by Amanda Leppia.

Recitation—"Drowsy Baby," by Violeta Philippi.

Recitation—"Abou Ben Adhem," by Pearl Hauk.

Duet, Drum and Piano—"Silver Blossoms Waltz," by Charles Cornelius and Woodrow Hanselman.

Recitation—"Charge of the Light Brigade," by Harold Van Bussum.

Vocal solo—"Mother," by Edgar Rock.

Recitation—"The Farmer's Life," by Willis Dezel.

Duet, Drum and Piano—"Suzanna," by Miss Beulah Dewar and Woodrow Hanselman.

Piano Solo—"Among the Roses," by Marjorie Philippi.

Vocal trio—"London Bridge is Falling Down on the Isle of Childhood Dreams," by Lucille Cornelius, Bertha Hauk, and Woodrow Hanselman.

Closing song—"Welcome, Sweet Springtime," by the seventh and eighth grades.

FIREMAN'S SON FINISHES COLLEGE ENGINEER COURSE

Emer J. Reider, son of Nicholas Reider, assistant chief of the fire department, is finishing the last year of his course in mechanical engineering at the Chicago Technical college. He

K. OF C. PLEDGE LIVES TO AMERICA

Deny Allegiance Other or Higher
Than That of Their
Country

Wisconsin Knights of Columbus at their state convention in Sheboygan this week, replied to the charge anti-Catholic magazines that Catholics owe political allegiance to foreign rulers with a resolution declaring that in civil and political matters Knights of Columbus recognize no allegiance "other or higher than that to our country." The resolution pledges allegiance in peace and war to the defense and maintenance of the republic and its splendid institutions developed under its constitutional provisions.

The resolution also deplores the "growing lack of respect for Christian principles and lawful authority," declaring that this movement openly challenges the fundamentals of religion and aims at destruction of American constitutional and economic ideals.

Another resolution placed the Knights of Columbus on record as favoring cooperation with other fraternal and civic organizations in a movement to stimulate knowledge and study of American institutions. F. W. Grogan, Kaukauna, was elected state deputy of the Knights, succeeding A. H. Schubert of La Crosse.

will graduate, with high honors on Wednesday, May 28.

FACE TERRIBLE FROM PIMPLES

And Blackheads Irritation
Intense. Cuticura Heals.

"I suffered terribly with blackheads and pimples. The pimples were large, festered and scaled over. They burned causing intense irritation. After washing my face the scales would fall off causing eruptions. I had to dispense with all pleasures because my face was so terrible."

"I tried numerous remedies but all failed. I began using Cuticura Soap and Ointment and after using one box of Ointment and one cake of Cuticura Soap I was completely healed." (Signed) Miss Felicia E. Smith, 2271 E. 46th St., Cleveland, Ohio.

Cuticura Soap, Ointment and Tablets are ideal for daily toilet use. Samples Free by Mail. Address: "Cuticura Laboratories," Dept. M, Malden St., Mass. Sold everywhere. Keep the Ointment and Tablets. 50¢. Try our new Shaving Stick.

Pettibone's Model House

Built After the Prize Plan of "House Beautiful"

Is Appleton's Pioneer Step in the
National Movement for Better Homes

PETTIBONE'S MODEL HOUSE places Appleton in the class of the big cities of the United States where similar and more elaborate homes have been built. Appleton's Model House and these other houses are built with the same purpose—TO INCREASE PUBLIC INTEREST IN BETTER HOMES FOR AMERICA! The Pettibone Model House is being built to show how fine a house, and how ideal a house, can be built economically by the average family of moderate means and size. The Pettibone idea of building a model house in Appleton will probably be imitated on a less complete scale in succeeding years. The Pettibone Model House has already SET A HIGH STANDARD OF THE BEST TYPE of home building.

The Prize Plan in a National Competition of 70 Architects

Pettibone's Model House is based on a plan that won the First Prize in a National Competition of seventy of America's best home architects. This competition was carried on by the House Beautiful Magazine, a publication devoted to artistic homes. Some additions and enlargements have been made to the Prize Plan to make an ideal home for Appleton conditions. In addition to expert planning, the Model House is beautifully situated in Bellaire Court.

The Model House is Built of Especially High Grade Materials

ONLY a well-built house can be a model one! The Pettibone Model House is being built exactly on the specifications of the House Beautiful Magazine. Only the finest materials and highest grade workmanship are permitted. The result is a house that will be a Model House for years after poorly constructed buildings, built at the same time, have disappeared. The Model House could have been built at a smaller cost, but not built so well!

The House Includes Unusual Conveniences and New Devices

The Model House includes an exceptional number of conveniences and new ideas in home building. There is the convenient breakfast room with built-in table and benches. The cabinets in the kitchen, and the linen cabinet upstairs are new thoughts. The attached garage is a great convenience in winter. There are book shelves, with drawers, in the living room and each bedroom is equipped with two closets. The electric wiring is unusually adequate, with many floor sockets and outlets.

The Model House is Built in the Beautiful Bellaire Court

The location of the Model House is as ideal as is the house itself. The lot is eighty-four feet wide at the front and a hundred and forty at the back. It is at the end of a street where there is no traffic! The yard has more than a dozen fine trees which add greatly to its beauty. The Model House is only 1 3/10 miles from Pettibone's corner, and only six hundred feet from the car line. The house has electric light, gas, water and sewer connections and splendid fire protection.

The Model House Will Be Sold at Its Exact Cost

The Model House will cost about \$8,023.30, according to present estimates. On completion, the exact costs will be published and the house sold for that sum. The cost will be a standard of fine grade building costs in Appleton at the present time. A schedule of contract bids is now posted in the House for visitors to read.

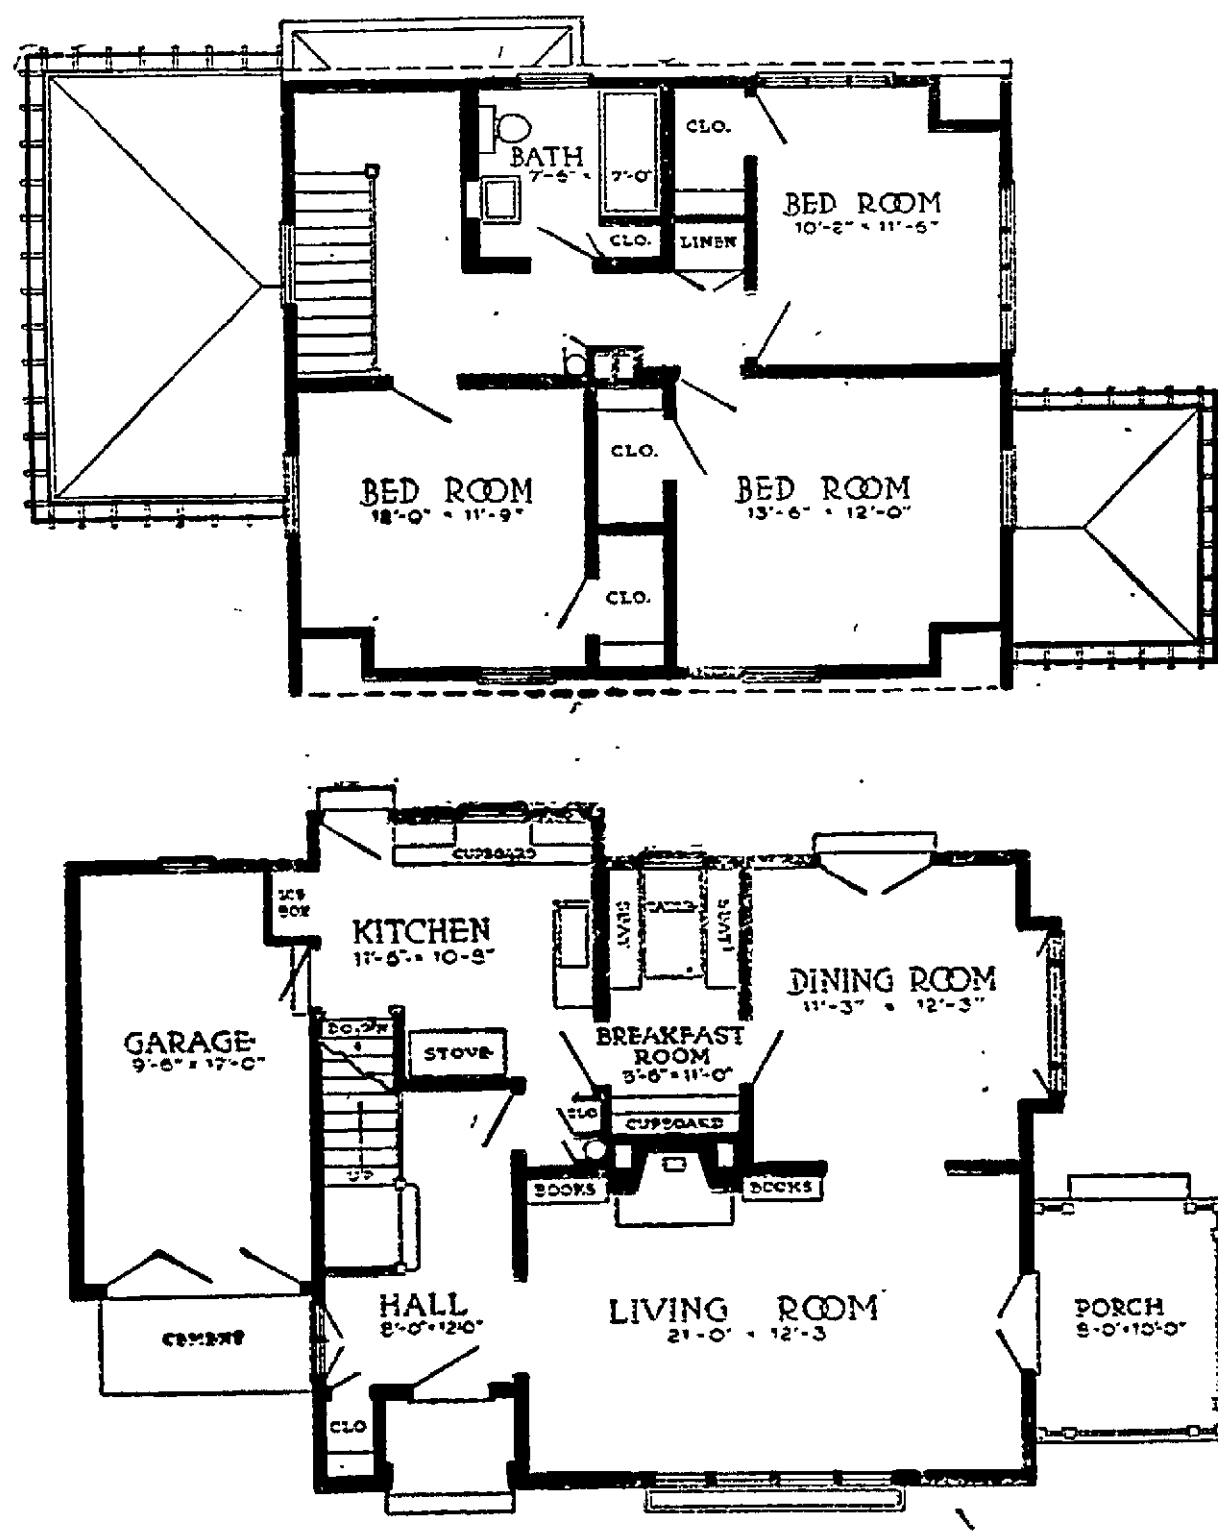

Interested? Register at Pettibone's

Are you interested in owning the Model House? If you are, register in the advertising office on the fourth floor at Pettibone's.

A number of names have already been received from interested parties. All names will be recorded and some method of impartially selecting the purchaser of the Model House from this list arranged. Register now.

House Exhibited Daily to Visitors Come Tomorrow

The Model House may be inspected any day of the week Sunday is a very favorable day for visitors and you are invited to inspect the House tomorrow. To reach the Model House, turn off Pacific Street to Tonka and keep to the right in Bellaire Court. The house is at the extreme end of the short street at the right.

Own Your Own Home BUT Let's Protect It

We Don't Even Own A Spadeful of Dirt

That's what a man said to his wife. Now they are living in a cozy little home which they selected from our list of Homes. Best of all we still have one left for you.

It is Your Duty to Protect Yourself and Family

with sufficient life insurance to pay a mortgage on your home if there is one, and leave a balance for the family.

It is also your duty to protect your home with insurance against loss by fire and tornado.

MOBILIZE ARMY TO ATTACK SHORTAGE OF HOMES IN U. S.

Coolidge and Hoover Give Approval to New National Movement

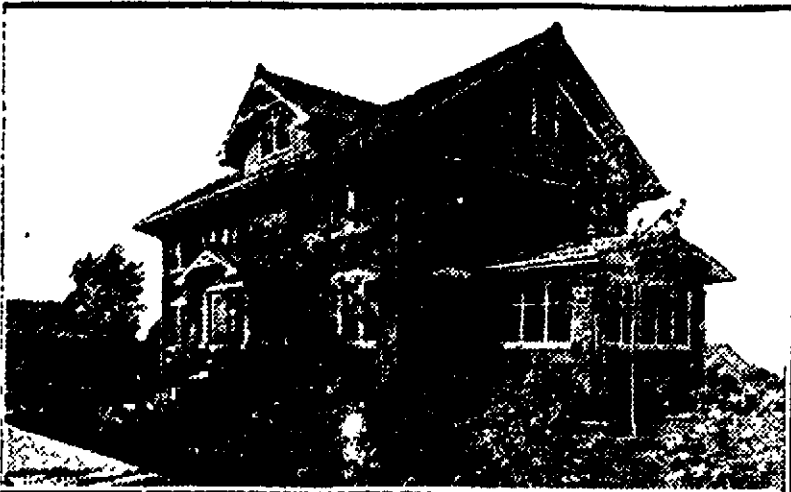

"An army of home makers," comments an old historian, "is the greatest army in the world." Such an army is being mobilized at present in communities all through the United States, under the direction of Better Homes in America, which was recently incorporated as a national educational institution, with Herbert Hoover, secretary of commerce, as president, and James Ford as executive director. President Coolidge heads the advisory council, and it and the board of directors of the organization are made up of some of the best known men and women of the United States.

It goes without saying that this is an army of peace. The weapons with which it is outfitted are hammers and planes and paint brushes, draperies and rugs and chairs, a handful of kindlings to start a fire in the grate, all the things that go to make homes beautiful and efficient, inside and out. The army's main attack is directed against our national shortage of homes, and against inconvenience and ugliness, lack of efficiency and of charm, in homes already existing and homes to come.

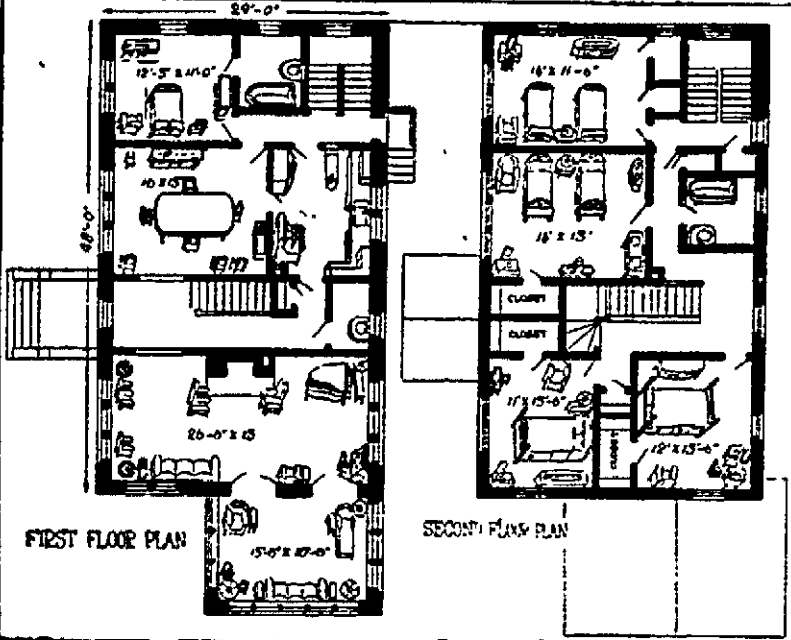

Already communities in every state in the Union have announced their intention of taking part in the better homes demonstrations. In previous years similar demonstrations have taken place all the way from the Gulf stream, where the better home was a vine-covered cabin, to beyond the far arctic circle, where it was a miner's shack. Last year alone there were approximately 1,000 better homes demonstrations in the United States. Every indication is that this year, with Better Homes in America now operating upon a national educational scale, both the number and the scope of the demonstrations will be vastly increased.

So many types of demonstrations are being planned that no community anywhere need be deterred from entering the contest by the fact that it cannot conform to regulations. That the demonstration shall lead to better homes in the community is the only real regulation. In fact, Particular stress, however, will be laid upon homes of moderate cost, since Better Homes in America maintains that the better home problem should be worked out first of all from the point of view of the family with a small income that must make both ends meet. Communities are urged to use their own ingenuity and resourcefulness in planning the kind of better homes demonstrations that will best meet the community needs.

Brick And Stucco Home Insures Durability

AMERICAN BUILDER MAG.

FRONT VIEW AND PLANS OF \$12,000 HOME.

The permanency of brick, its availability in nearly all parts of the United States, the ease with which it is combined with other materials and ruggedness of brick construction combine to make it a favorable material.

This combination of brick with stucco in the gables and a tile roof is particularly pleasing and is a construction which should insure durability. The covered entry porch and the variations in the windows are largely responsible for the pleasing exterior.

Entrance to the commodious interior is effected through the reception hall, containing the stairs. This divides the long living-room with the adjoining sun porch from the rest of the first floor, arranged for the most efficient operation of the dining-room and kitchen and providing for a maid's room and bath room and a rear stairway. Four bedrooms of adequate size, all with roomy closets, are provided on the second floor.

The approximate cost for this home is \$12,000, although this figure is subject to a wide variation. The cost of materials is regulated in each locality by the freight rates from the source of supply. Each community has a different wage scale for workmen and the individual demands of the home owner for various features in finishing the home may make the cost price vary thousands of dollars.

WISCONSIN LEADS IN HOME OWNERS

Wisconsin leads the states of Ohio, Indiana, Illinois, Michigan—the east-north-central group—with a percentage of 53.6 per cent of families owning their homes. Michigan ranks next with a percentage of 52.9 per cent; North Dakota, leading the entire country, is ahead of Wisconsin by only 1.7 per cent. During the period of 1910-1920 North Dakota showed a decrease in home ownership of 2.8 per cent, while Wisconsin's decrease was but 8 per cent.

Figures compiled by the United States bureau of the census shows a general decrease of .5 per cent for the last 20 years. The 10 leading states in respect to home ownership in 1920 were, in order: North Dakota, Wisconsin, South Dakota, Idaho, Minnesota, Montana, Utah, Maine, New Mexico and Michigan.

QUARRYMEN STUDY HISTORY OF STONE

Many different periods of history, some reaching back hundreds of years before Christ, are represented in specimens of stone being assembled by the Indiana Limestone Quarrymen's association, says an Associated Press dispatch from Bedford, Ind. When completed the collection is planned to constitute a complete history of stone, and include every variety known. Stone carvings from all ages traced by historians and Egyptologists are being gathered.

Most valuable of the material already obtained is the collection of stone furniture and tablets recently dug from the tomb of Tel-El-Amarna and now being sent here by the Egypt Exploration society, for exhibition during the spring conferences of architects and builders.

An effort is being made to obtain limestone specimens from the oldest known building in the world, recently uncovered at Tel-El-Obel, Babylon, four miles from Ur, of Biblical fame. Reports to the association declare this find has moved the ancient history of Babylon back another thousand years. The building, discovered by the joint expedition of the British museum and the University of Philadelphia, is declared to be more than 6,000 years old. Remarkable carvings of animals done in limestone, mosaics and even artificial flowers of stone are included in the find.

INDOOR FERNERY ADDS TO BEAUTY

Care of Ferns Requires Little Time and They Add Splendid Home Touch

An indoor fernery is always interesting, presenting, as it does, at all seasons many tints of green from the tender new fronds to the older and more matured. From early March, growth becomes abundant, and it is then that work begins with removing most of the exhausted fronds of that ever useful adiantum cuneatum, so that the new growth may have space to develop, and any division or repotting of plants may be carried out before they are too far advanced in growth.

It is unnecessary to report each year—in fact, many of our choicest varieties are better left alone when thriving successfully—a removal of the surface soil with a pointed stick and a top dressing of good loam and peat sufficing in many instances. These maiden-hair ferns do remarkably well in quite small pots, even thumbs proving most useful where much furnishing has to be done, young seedlings doing the best. Established plants after a few years become exhausted in the center and need division, retaining the outer portion for any increase in stock. Fairly firm potting is essential to success.

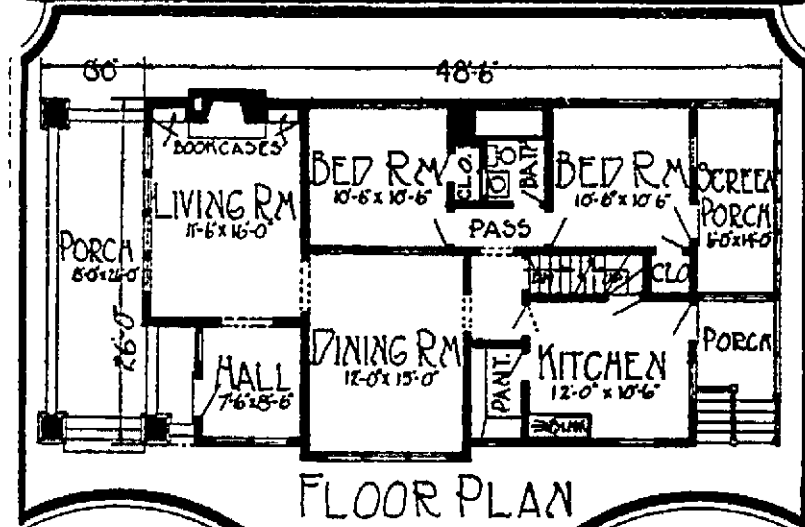

LIGHT SHADE IS HELPFUL

A light shade is very beneficial to most of the ferns grown under glass but it should be used only during bright weather from March until well into September. Free ventilation, too, is most important during the hot days especially toward the early autumn so as to get the fronds well hardened for cutting, and as growth extends and newly potted plants fill their pots with roots a weak stimulant such as seawater should be applied once a week.

The above remarks apply to the maiden-hair fern principally, but there are many others that adopt themselves to similar treatment, such as Pteris, Nephrolepis, Davallia, etc. Green-fly, thrip and brown scale are the chief insects that attack ferns under glass. Light fumigation will rid them of the two former, but care is needed or the fronds of adiantum, especially A. Farleyense, take on a brown appearance and their beauty is spoiled.

Heavy overhead sprinkling should be avoided, but plenty of damping done between the pots, walls and walks. A few flowering plants introduced among the ferns especially during the winter set the others off to great advantage. Calanthes, euphorbia, begonias or any other flowering plant that requires a mean temperature of 55 degrees to 60 degrees will develop and last a long time in perfection. Even tree ferns in the same structure need much less moisture and are all the better for a comparative rest during the short, dark days of winter.

Well-Planned Bungalow For Narrow Lot

Copyright, American Builder Magazine, Chicago.

Here is one of the few types of bungalows that can be built on a narrow lot. At the same time it gives the maximum of room, convenience and light. The exterior is of stucco, relieved by white trim. A roomy porch leads into the hall and thence into the living room. The screen porch in back may be used as an auxiliary bedroom, especially for the baby. The bedrooms are reached through the door off the kitchen and are grouped together at one end. The whole house is 26 feet wide and 55 feet 6 inches deep.

entering plant that requires a mean temperature of 55 degrees to 60 degrees will develop and last a long time in perfection. Even tree ferns in the same structure need much less moisture and are all the better for a comparative rest during the short, dark days of winter.

PLANTING IN NOOKS

The most interesting fern house is where the plants, or, at least part of them, can be planted out in nooks and corners, and among stone, brick-work, etc., the paths to be winding where possible as in the case of a well-formed rocky garden. Slugs are most destructive among young fronds of many ferns, and must be constantly searched for at night.

USE MASONRY TO CONSERVE LUMBER

Wood for All Building and Furnishing Purposes Is Becoming Scarce

The growing scarcity of timber throughout the country is focusing the attention of builders more and more on the necessity of using other materials in building, so that wood may be conserved and its use first directed to the fields where it is practically indispensable.

Manufacturers of furniture, for instance, who must use wood, are having even greater difficulty in obtaining enough of the right kind of wood for their requirements. Wood for finishing the interiors of homes and other buildings, also, is constantly becoming more difficult to procure except at almost prohibitive prices, because of the wasteful use of wood in the past.

The United States, which a hundred years ago was virtually covered with virgin timber with the exception of the prairie region, today is almost stripped of its forests. Second-growth timber is inadequate to meet the country's needs if lumber is to be used for all building purposes. Conservation and reforestation programs have come too late to remedy fully the earlier wasting of the forests.

In Europe conservation of timber has been practiced for hundreds of years. Cutting of undersized trees has been prohibited and every care taken to utilize the available wood without waste. Europe has long ago resorted to masonry for house construction, for economy's sake, and now uses this type exclusively for its city homes. This policy has been instrumental in holding the European fire loss to a minimum. In comparison, the American practice, with a fire loss many times that of Europe, has been to use the less durable and less fire-resisting materials for home building.

Now American builders are striving wherever possible to substitute some form of masonry construction—stone, brick or concrete—to conserve wood, as Europeans have done for hundreds of years.

WOULD SELL BUILDING MATERIAL ON "TIME"

Let the building material men create an instrumentality for selling their commodities to home builders on the installment plan, is the novel suggestion laid before the recent convention of the Ohio Lumber Retailers' association by figures received from the principal advisor of the National Lumber Manufacturers' association. The suggestion made such a "hit" that a committee was appointed to deal with it and given authority to bring it before other associations.

At Your Service

*In Aiding You To Select Gas and
Electrical Appliances That
Will Give Satisfaction*

It is not enough that your gas and electric service shall be of the highest standard. If these utilities are used in appliances that are defective, uneconomical, or short lived there will be dissatisfaction. To avoid this the Wisconsin Traction, Light, Heat & Power Company offers to its customers appliances which stand the most rigid test and which are supported by the most complete guarantee of the manufacturers.

Exhaustive tests are made under actual working conditions for efficiency, endurance and economy of operation, and the appliances which the company offers its customers are believed to be the best in each line.

This service costs the customer nothing. Inquiry involves no obligation to purchase. Before buying gas or electrical appliances consult your central station company which in Appleton is the Wisconsin Traction, Light, Heat & Power Company.

Cooperation Can Help Us To Serve You

Every business, to be successful, must have public confidence. Particularly this is true of a Public Service Company, such as your Gas and Electric Company, whose reason for existing is to serve the public.

You, our individual customer, together with the other residents of this city, are the public that is served. It is your individual co-operation that the Traction Company seeks.

Let us make this, the public and company, an ideal partnership and let us work together for the common good, to correct misunderstandings, to avoid waste of gas and electricity, and to get full efficiency from the use of appliances.

"Do It Electrically"

BRISK DEMAND FOR BRICK FOR HOME BUILDING

Chicago Uses More Brick Than
Any Other Area in
United States

Figures on common brick production and shipments during the last month reveal a normal seasonal condition. While the unburned brick on hand remains about the same as during the previous 30-day period and there has been a slight reduction of burned brick on hand, the quantity of brick moved from the yards has greatly increased.

The Feb. 1 report showed that 45,751,000 bricks were moved from the yards during the previous 30 days, while the current report shows that 104,668,000 bricks were moved during the last 30 days. This is the result unquestionably of better weather and resumption of work in the larger cities.

WISCONSIN CONTRIBUTES
The Illinois, Indiana and Wisconsin district contributed largely to this increase in shipments, while increases are shown also from the southern states of Virginia, North Carolina, South Carolina and Georgia and a slight increase from Kentucky, Tennessee, Mississippi, Alabama, Arkansas and Louisiana. California also shows a gain in shipments.

Chicago continues to break all records in brick consumption. In 1923 12,200,000 bricks were consumed in the Chicago district, and the deliveries for the months of January, February and March have even exceeded the high mark set up in the corresponding months a year ago. Chicago, since the great fire in '71, has been a leading brick market, but is today consuming a greater amount of brick than any other metropolitan area in the world.

WEST LEADS
While Manhattan probably would hold the record in the consumption of common brick in comparison with any other area, it is a fact that the residential portions of Greater New York do not consume as much brick as the residential sections of Chicago. This is due to the fact that practically the entire city of Chicago has been declared a fire-zone, in which no building may be erected with inflammable exterior, while in the residential sections of New York outside of Manhattan frame is the prevailing material.

The brick manufacturers of the Atlantic seaboard still have one eye at least open for the foreign brick situation. Authentic reports covering the receipts of brick in 1923 proved that there was much exaggeration in earlier estimates of quantities received. Not more than 50,000,000 bricks were received altogether from foreign ports, and much of this, in fact, was

Avoid Giving "Black Eye" To Exterior Of Your Home

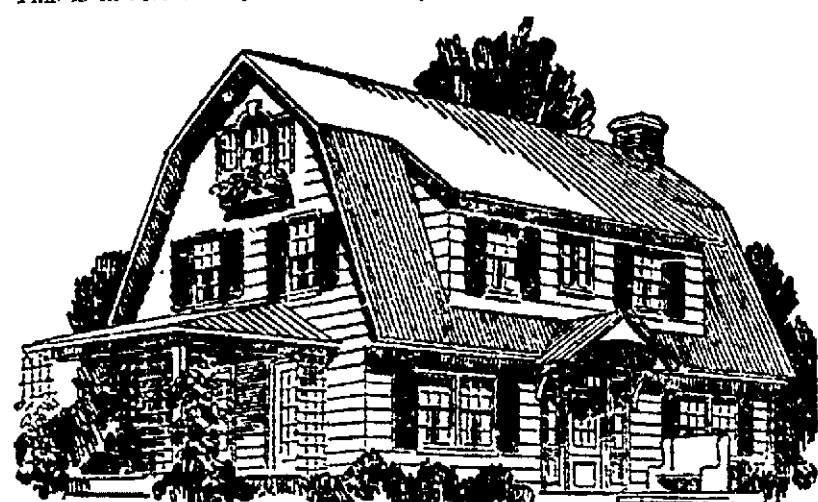

BY AN INTERIOR DECORATOR

The skilled home furnisher pays attention as carefully to the impression the exterior of her house will make as she does to its interior. Interior decorating includes in one respect exterior decorating.

This is in reference to the windows,

Changing metaphors, it might be said that if a woman's good taste can be told from her shoes and her hat, the good taste in which a house is decorated may be told from the appearance of its windows.

When in each room a differently

which some one has called "the eyes of the house." No one would fancy having one blue eye and one brown eye, or a pink eye and a green one. Just as incongruous effects as they would make are sometimes produced by the unskilled or careless in treating the final object in furnishing a house—the windows.

colored fabric is hung across the window panes an indescribably messy exterior appearance results. In the interior all color they supply can be more effectively given by properly chosen overhangings.

Simple flat nets at every window produce a harmonious and pleasing effect.

MILLIONS DEPEND ON BUILDER TRADE

Secretary of Labor Davis recently stated as follows: "More than 11,000,000 of our people are dependent for their living upon the construction industry and 22 per cent of all the skilled and unskilled labor of the country is engaged in the building branch alone. Some 250,000 freight cars are required to handle the material. Our building bill is \$200 per year for each family in the United States." Mr. Davis concluded: "It is truly the chief barometer of the business of the country. When construction gains prosperity is with us. It is the great outstanding influence for good or bad in our financial progress."

not brick at all, but a substitute made out of sand and lime. This material, moved slowly and, in fact, some of it is still in the hands of the dealers.

REAL ESTATE HALF OF WEALTH OF U. S.

More than half of the wealth owned by the people of the United States or existing in the United States is contained in the single item of real property, the land of these 48 states and the buildings making its cities and villages and farm homes, according to a summary made by the National Association of Real Estate Boards of statistics just released by the United States bureau of census.

The total wealth of the United States, exclusive of property owned by the United States government, is \$310,274,476,000, according to the census lists of wealth in the 48 states. Of this real estate makes up a total of \$174,231,456,000. This includes property of states and of smaller governmental divisions.

Of the total valuation of real property outside of federal holdings a total of \$154,195,951,000 is taxable. Tax exempt real property, including schools, state and local public build-

SAVE LUMBER BY NEW SAWING SYSTEM

Ford Sawmills Introduce Plan
to Reduce Waste in
Production

(From The Lumber Trade Journal)

By methods now to large scale lumbering and woodworking the Ford Motor Co. has installed a new wood sawing system which has demonstrated savings of from 35 to 60 per cent in the cutting of fine hardwood for automobile body parts by sawing them direct from the unedged planks as they come from the log.

This is an achievement in wood conservation as important as the generation has produced. The system is already on a production basis at the sawmills and wood-working plants of the Ford Motor Co. at Iron Mountain, L'Anse and River Rouge.

The Ford system is simple. Planks with the bark left on are cut from a log in parallel planes varying according to the shape of the log. These are sent to "layout tables" where patterns for various parts are marked out until the plank is completely covered with patterns right up to the bark.

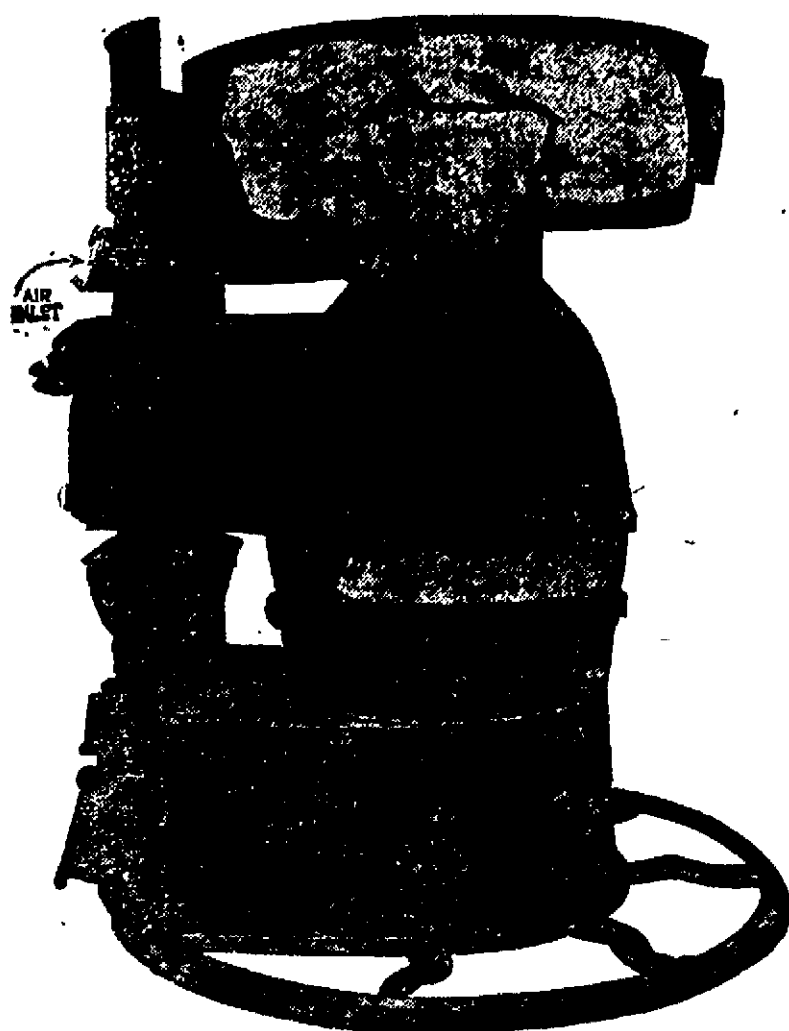

Any irregularities, such as the swell at the butt, are taken advantage of in laying out curved or irregular parts. Instead of trimming off a large piece to avoid a knot or check, the layout men simply go around it. This method permits the utilization of nearly all the wood, the scrap being extremely small. The various parts are then cut out with a high speed hand saw.

A sample tree was cut up into parts under the new method and the results compared with the amount of parts which the old method of edging and sawing would have given. The results were so startling that the system was put into effect at the various Ford plants as soon as possible.

The tree gave two irregularly shaped logs which scaled 238 board feet. There were also a number of branches and the top. The best use that could be found for these under conventional lumbering methods would be to send them through the wood distillation plant. Instead they were sawed up and marked for parts sawing.

The edging and trimming method gave 127 board feet of body parts. Under the Ford system the same planks yielded 204, a gain of 77 feet, or 82 per cent. The limbs and top—hitherto considered worthless except for distillation or fuel, gave 170 board feet additional, making a total of 383 board feet of parts as against the 127 board feet obtainable under the old method.

ings and churches, amounts to a total of \$20,032,475,000, census statistics show.

THE UTICA SUPER SMOKELESS FURNACE

Will Eliminate a Waste of 50% of Your Fuel Bill

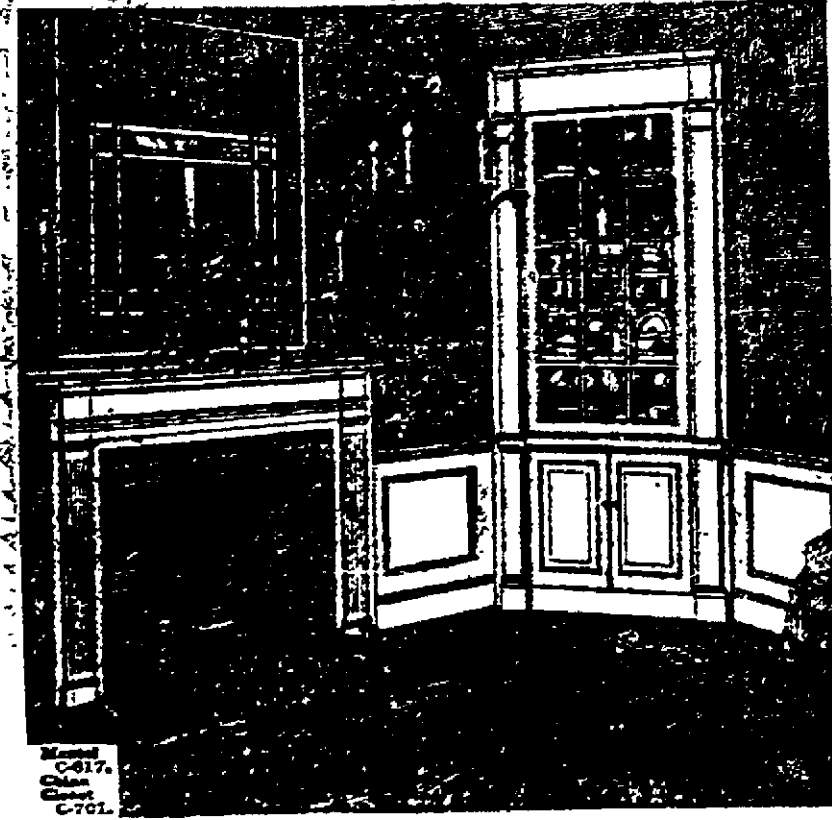

When you buy coal for your furnace, you pay for ALL OF IT but the best part of it goes up the chimney in the form of GAS and SMOKE. It is the gas which is so valuable in heat units and ordinary furnaces all waste the largest portion of the gases and the carbon.

THE UTICA SUPER SMOKELESS FURNACE — Burns them with additional oxygen, in a secondary combustion, giving you double heat results and eliminating black soot and smoke. This wonderful furnace burns the dirtiest kind of soft coal—smokelessly and without soot. We can prove this in actual demonstration.

CURTIS WOODWORK

Curtis Woodwork Helps Home Builders

The modern refinements and conveniences you will want in your new home are difficult to design. Examine the Curtis line of woodwork. You will find that exacting, technical thinking done for you. Architects—among the best in America—have evolved the designs used by Curtis. These include doors, windows, bookcases, mantels, china closets, dressing tables, kitchen dressers, ironing boards, dining alcoves, outside and inside moldings, and practically everything else you will need in the woodwork line.

Curtis Woodwork shows plainly high quality and good taste. Yet it proves a real economy, when installed. As authorized Curtis dealers, it is our duty to assist you in every possible way to make your home one of built-in satisfaction. Come in and talk over your building problems. Our advice costs you nothing and our experience may help you in your planning. Make sure that the woodwork you buy bears the trademark CURTIS.

CURTIS

"Why Be It Ever So Humble When There's No Place Like Home?"

Build "Your" Home Sweet Home of Concrete Blocks

In 1823, John Howard Payne wrote "Home, Sweet Home." It was therefore thought eminently proper to use the home which inspired Payne's immortal song as a model for a modernized "Home, Sweet Home". Such a home was built on government property near the White House in Washington in 1923. It is designed to stimulate the idea of better homes and more general home ownership and was sponsored by the Better Homes in America Movement and the Home Owners' Service Institute of New York. Don Barber, Architect, was selected as the designer of this modernized "Home Sweet Home." He aimed to conform to the Department of Commerce House Code which calls for elimination of wastefulness, reduction of costs, permanency and safety in construction. After a careful survey, Mr. Barber selected "Concrete Block and Stucco" for this modern home, a product obtainable in your own home town. They are inexpensive and authorities now recognize them as a permanent and economical form of construction. The original cost is only 2% more than a frame structure—but it saves the cost of painting which is equal to the interest of practically \$3000.00 for one year at 6%. When concrete blocks are used depreciation is down to a minimum. Tests have shown the extreme durability of cement stucco on concrete blocks and it is reasonable to expect that the modern "Home, Sweet Home" with all its low upkeep cost and its durable exterior finish will retain its new appearance for a much longer time than did the old Payne Home. It will go down to future generations unscathed by time and a remembrance to our present day science of construction.

Do You Know

What The Appleton Building & Loan Association Is Doing For This Community?

THE prosperity of this community depends upon the amount of money available for use here. Invested money too often works for the prosperity of some other community.

The Appleton Building & Loan Association keeps your money in this community. Money left with this institution is money which is immediately returned to our manufacturers, to our merchants, to our tradespeople, to our working population and to our farmers. It jingles in the pockets of our home folks.

Let The Appleton Building & Loan Association Help You To Own Your Home

The primary purpose of a Building and Loan Association is to enable those of moderate means to realize their life's ambition. To have a home of their own.

It is Easily Accomplished

You can easily do this if you start in now; take out stock in our association today, pay a certain fixed sum each month and in the course of a short time your shares will have a borrowing value sufficient to enable you to buy or build your home.

Better still, if you have a lot or a small amount of cash on hand come in and make application for a loan on which small monthly payments are arranged to pay it back, principal and interest. You'll be amazed at the perfectly simple and easy manner in which this can be done and the property will be yours as you have so long desired.

A good citizen is a better citizen when he OWNS his home.

A Safe Investment

Building and Loan stock is the best paying safe investment one can make.

Money you invest in shares of stock in the Appleton Building and Loan Association is loaned on residence property on FIRST MORTGAGES only. This property is first appraised by a valuation committee of experts and their report of valuation is passed on by the Board of Directors. Title is examined and personality of the borrower also is given consideration. The Association is safe-guarded also by annual examination of committees of stockholders; annual examination of pass-books by auditors; annual report and examination by Auditor of the State of Wisconsin, Secretary and Treasurer required to make monthly statements to the directors and the Secretary and Treasurer are fully bonded to the Association.

A Profitable Way To Save

The Appleton Building and Loan Association offers various classes of stock designed to meet the wishes of every investor.

Class A—50c Per Share Per Month.
Class B—75c Per Share Per Month.
Class C—\$1.00 Per Share.

Dividends on these shares are credited every six months with compound interest.

Class D—On Paid Up Stock—\$100 Per Share.

Dividends are mailed to holder every six months.

The Appleton Building and Loan Association is a MUTUAL organization in which all share holders are on equal basis, no select few "cut a melon" or have preferred shares and no director will profit a dime except on the basis of a share holder, every dollar earned after office expenses are met is divided on an equal basis among the share holders. Your money is always available on thirty day's notice, with interest and your money is used to enable some one to "Own His Home" who otherwise may not have one.

You are cordially invited to become a shareholder in this Association. Further information and a copy of our last statement can be secured from the Secretary or any officer and director of the Association.

COMPLETE PLANS FOR MEMORIAL DAY PROGRAM IN CHAPEL

Procession of Military Organizations Will Precede Set Program

Impressive exercises will be held at Lawrence Memorial chapel and at Riverside cemetery on Memorial day in honor of veterans of three wars.

According to the program just announced by William H. Zuehlke of the Memorial day program committee, the exercises will begin in the chapel at 1:45 in the afternoon, or immediately after the street parade which will start at 1:30. Following the program at the chapel, the veterans' military organizations, patriotic orders and others will go to Riverside cemetery to pay tribute to the soldier and sailor dead at veterans' graves.

MAYOR PRESIDES

Mayor John Goodland, Jr., will preside at the chapel and will deliver the opening address. The principal speaker will be Vilas Whaley, commander of the state department of the American Legion. Music will be furnished by the 126th Field Artillery band, a mixed chorus, a women's chorus and a double quartet.

The program at the chapel will open with an address by Mayor Goodland, followed by a selection, "United We Stand," by the Artillery band. The audience then will sing "America," and the Rev. J. P. Menzies, chaplain of the day, will offer the invocation.

"To Thee, O Country," by Eichberg, will be sung by a mixed chorus, after which Herman F. Heckert will read "General Logan's Order No. 11." Following another song, "America Triumphant," by Demorest, sung by the mixed chorus, there will be another reading, Dr. A. W. Kanouse will read Lincoln's famous "Gettysburg address." The stirring anthem, "The American," by Foster, will be sung by a women's chorus.

The Memorial day address then will be delivered by Vilas Whaley of Racine. The program will be concluded with the singing of the national anthem, "The Star Spangled Banner," by the audience, and with an organ recital.

At the lot of the George D. Eggleston post, Grand Army of the Republic, at Riverside cemetery, the program will be opened by the singing of "Dixie's Rag" by a double quartet. Prayers will be offered by the chaplain of the G. A. R. post, A. C. Simpson. A memorial address by Commander James D. Hanchett is to follow. The soldiers' graves are to be decorated by the women's patriotic organizations. Following the singing of "The Vesper Chorus," by the double quartet, the Rev. J. P. Menzies will pronounce the benediction. The exercises will be concluded with the firing of a salute by a detail from Company D, 127th Infantry, Wisconsin National guard, and "taps" by buglers of Company D.

NEW PAPER MACHINE READY FOR TRYOUT

Rapid Progress Is Made at
Riverside Company's New
Paper Mill

The new paper machine in the new mill of Riverside Fibre & Paper company is about ready for its tryout. The final adjustments are now being made. It may be some time, however, before it is started up as there is considerable work still to be done to the mill.

As soon as the new machine is in operation the company plans to move the paper machine in its present mill on the west side of Lake-st to its new location immediately south of the new machine.

The machine room in the new mill is well lighted and ventilated and is one of the handsomest of its kind in Fox river valley. The work of painting the machine room has been completed and the painters are now doing exterior work. The exterior is being painted white and the greater part of the north and east sides are finished.

The new office is about completed and the pipe connections between the new building and the filtering plant on Lake-st will be finished in a few days.

OUTGAMIE BANKERS MEET IN SHEBOYGAN ON MAY 28

Bankers of Outagamie-co and 15 other counties will gather at the convention of Group 3, Wisconsin Bankers association, in Sheboygan on May 28. Preparations are being made for more than 100 bankers and those accompanying them. Business sessions will be held in the morning and a banquet will be given in the evening.

REPRESENTS NEW COUNTRY CLUB IN CHICAGO TOURNEY

Frank Walsh, Butte des Morts
Professional Arrives from
Chicago

Butte des Morts Golf club will receive its first recognition in golf association circles when its professional, Frank Walsh, takes part in the national open golf tournament in Chicago next Tuesday. He has entered the event as the representative of the Appleton club.

Mr. Walsh arrived here Thursday from Chicago and is making his home temporarily at 777 Harris-st. He came here to practice for the Chicago tourney and will spend the remainder of next week in Chicago. He expects to take up his duties at the new golf course on Brickyard-rd June 1, and will be at the grounds continually in his capacity as instructor of the members.

W. C. Jackson, the engineer who has charge of construction of the 18-hole Butte des Morts course, also intends to move here from Chicago and make Appleton his permanent home. He has taken up tentative quarters here and will establish residence as soon as his family arrives. Mrs. Jackson has been visiting in Virginia and expects to come to Appleton soon.

Mr. Jackson has been engaged as managing secretary of Butte des Morts club and will devote most of his time to the launching of the new country club and getting its activities into smooth working order. He also will supervise the construction of other golf courses in this vicinity and has several for which he has been engaged. One of these is the addition of nine holes to the Oshkosh Country club's grounds at Oshkosh, which had only nine before.

Rains have delayed some of the work on the Butte des Morts project but they have been a help in growing the newly planted grass. Much of it already is visible on the green. Ten greens and nine fairways now have been seeded and soon will be blanketed with green. The course is located on Brickyard-rd at the end of the concrete portion of the highway.

BEATS COPS TO COURT; CURIOSITY COSTS \$500

Oshkosh—William Erhardt, Menasha, couldn't wait to see what Municipal Judge A. H. Goss would have to say about the finding of intoxicating liquor at his soft drink parlor, so he journeyed to Oshkosh and asked to be allowed to enter a plea of guilty, and although no complaint had yet been filed by the prohibition officers who staged the raid. He was fined \$500 by Judge Goss, who is aiding in a campaign against drunken auto drivers.

WHEN BETTER AUTOMOBILES ARE BUILT, BUICK WILL BUILD THEM

SMALL ROOM CAN LOOK SPACIOUS

Careful Selection of Furnishings and Decorations Is the Secret

Fortunately a small dark room can be made to look larger and lighter just by the simple use of a cheerful color scheme. Without added windows or bright sunshine, colors cleverly chosen will lend an attractive effect.

The small living room, whether it is in an apartment or cottage, is much more pleasing and restful if it appears spacious as well as cheerful. A color scheme worked out to give the sunshine effect in a room not much larger than twelve by fourteen was simply yellow and green. The light gray walls were not changed nor the taupe rug that toned in, in a deeper shade. But the heavy pieces of furniture that took space, were cumbersome and light absorbing were all taken out. In their place some artistic wicker furniture, such as a pair of easy chairs a daybed, a table and a fern stand, were substituted. And while wicker is light and airy in itself, this set further emphasized the sunny color scheme by being enameled in a light warm green, which was finished with a frosting here and there of gold paint.

The curtains and lamp shade were gold-colored china silk. Altogether the warm yet airy effect was delightful. Ferns in the fern stand brought out the restful green as well as the lamp standard of green pottery. A picture framed in gold and a bowl of yellow porcelain will brighten any dark room. And such accessories as a screen, waste basket, cushions and a bowl of goldfish can do much to a small dark room if they carry out a sunny color scheme. So instead of blue, dull mahogany or brown, use yellow shading from the shadow lawn green into deep, warm orange.

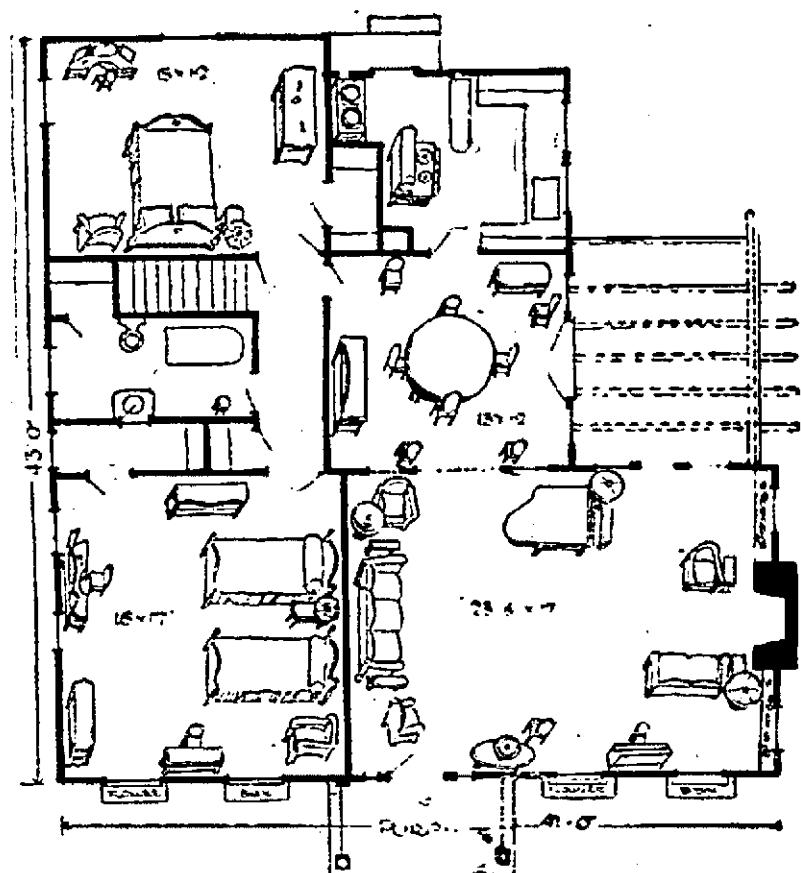

MILLIONS ENROLLED IN LOAN SOCIETIES

Building and loan associations in the United States, based on the ideas of a little group of people in Philadelphia who organized in 1831, now have a membership of 7,000,000 in this country alone. More than 1,000,000 new members have been added in the last 12 months.

One person in every 16 in the United States is identified as either a saving or borrowing member in some building and loan association.

The motto of building and loan associations is The American Home, the Safeguard of American Liberties. More than 10,000 associations in the United States now have total resources of \$3,500,000,000 exerted continually in behalf of home ownership.

Convenience And Charm In Colonial Bungalow

FRONT VIEW AND FLOOR PLAN OF THE COLONIAL BUNGALOW

Incorporation of the charm of the colonial with the convenience of the impression of increased size is given to both rooms.

The pergola terrace behind the dining room gives a maximum of convenience since it is accessible from both the dining room and the living room. The kitchen is arranged as an efficient domestic unit.

The bed rooms are unusually large for a home of this type. Both have light and ventilation from two sides and commodious closets.

The cost of such a home is subject to all of the variations caused by the differing rates of pay for workmen, variations in freight rates and in materials used in construction. The approximate cost of this home, which of adequate size and opens off the living room in such a manner that an

OLD SKYSCRAPERS ARE REAL PROBLEM

Engineers Working Out Ways to Make Old Office Buildings Useful

Skyscrapers and office buildings erected 20 years ago are approaching the point of obsolescence, and their modernization is one of the major problems of city development, according to Earle Schultz, president of the National Association of Building Owners and Managers, says an Associated Press dispatch.

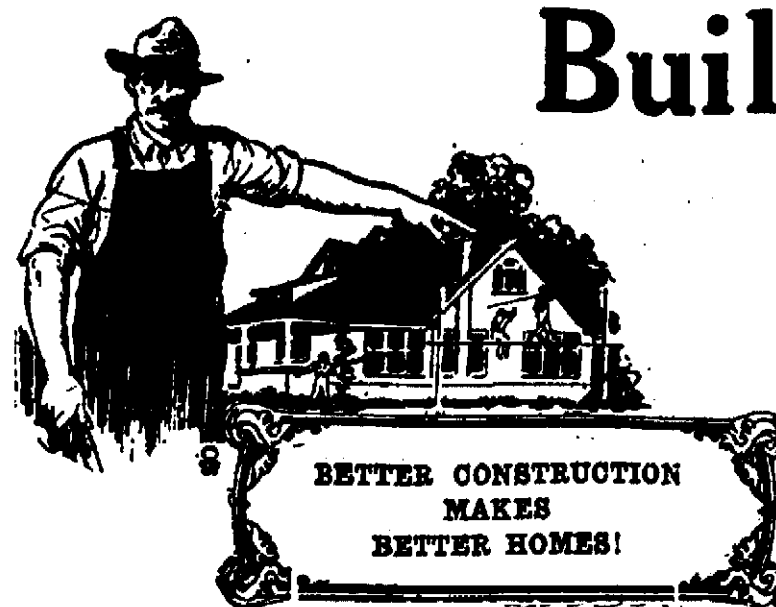

"Until 20 years ago there were few high buildings in American cities," said Mr. Schultz. "In the years that have followed we have seen the skyline reach greater heights, but the great amount of building in the late '90s today brings us face to face with the problem of refitting and rehabilitating many of these old buildings for further service."

"Studies made by our organization indicate that buildings past one score and ten are approaching the point of obsolescence. Until now we have not been compelled to give the older office buildings much thought, but now with so great a number of the oldtime office buildings reaching a place where their usefulness may be questioned, it is imperative that we ascertain the best ways and means of preventing losses that would total millions of dollars."

"The high cost of building materials of the present day makes it all the more urgent that we conserve the material in the older structures. Because of the nationwide importance of the problem, the association convention to be held in Colorado Springs, June 23 to 28 will devote much time to a study of old buildings and the work of modernizing them."

CHICAGO IS GREATEST CONSUMER OF BRICK

Chicago continues to break all records in brick consumption. In 1923 1,200,000,000 bricks were consumed in the Chicago district and the deliveries for the months of January, February and March exceeded the high mark set up in the corresponding months a year ago. Chicago, since the great fire in '71, has been a leading brick market, but is today consuming a greater amount of brick than any other metropolitan area in the world. While Manhattan probably would hold the record in the consumption of common brick in comparison with any similar area, it is a fact that the residential portions of greater New York do not consume as much brick as the residential sections of Chicago. This is due to the fact that practically the entire city of Chicago has been declared a fire zone, in which no building may be erected with inflammable exterior, while in the residential sections of New York outside of Manhattan frame is the prevailing material.

BUILD OR RENT? WHICH?

Discussion of the Factors
Which Have a Bearing on
Whether You Will Rent
or Build.

MORAL EFFECT OF OWNING

The discussion of this problem reveals that in reality it amounts to whether you wish to pay rent to yourself or to someone else.

No matter where or how you live you are paying rent. If not to the landlord—then to yourself. The point is which pays best—rent on someone else's house or your own. You probably have been pondering much on just such questions. If you do not want the burden and responsibility of caring for a house, or if this responsibility for you is heavier than that of providing the rent, then for you, renting probably is cheaper.

Taxes, insurance, depreciation, upkeep and many more such items must be covered by the rent. But, in addition you must pay the landlord an ample return on his investment. Remember it is a business investment and he is entitled to a margin of profit. This varies as to locality, but is rarely less than eight per cent and frequently, so government statistics tell us, as high as thirteen per cent. Such a rate is necessary to protect the landlord's investment and give him due profit.

The amount of money spent yearly for the privilege of having shelter over our heads is astonishing, especially when we remember that not one dollar of it constitutes an investment toward ownership.

Periodically all renters have qualms of doubt as to whether the same amount of money invested in a home would not prove a better investment. Perhaps you are fully satisfied yourself that home ownership is the ideal state, but hesitate to take the leap because of lack of definite information as to financial obligations. You wish to know whether you would be tying yourself to an obligation heavier than your ability to carry.

Home Building an Investment.

It is altogether wrong to assume that the financing of a new home constitutes the signing of your name to eternal indebtedness. No matter on what basis you pay for your home, the fact remains that you get not only what your renting neighbor gets—a receipt—but in addition, a tangible, physical something that belongs to you for evermore—A Home of Your Own.

Moral Effect of Owning a Home

Quite aside from the sense of joy that one gets from owning or paying for a home, there is the moral effect that must be considered.

Many a family, which otherwise would have gone from year to year accumulating nothing in the bank account, have been saved from certain ruin by the systematic saving habits made necessary by the circumstance of paying for a home.

Without an obligation of some such nature very few people are inclined to the extent of saving a definite amount each month. It is perfectly easy to start a savings account with the honest intention of depositing a certain amount periodically, but circumstances cause you to alter your habits and the first thing you know you have forgotten your fine resolution.

It is a mistake to assume that home building requires a lot of money to begin with. Many homes all around us have been built and paid for with comparatively small initial outlay.

The proper way to look on home ownership is that it is an enterprise—a business if you please. It is a plan for investing your money in your own enterprise for safe and secure returns. But like all business it must be approached with good judgment and understanding, followed up with good management.

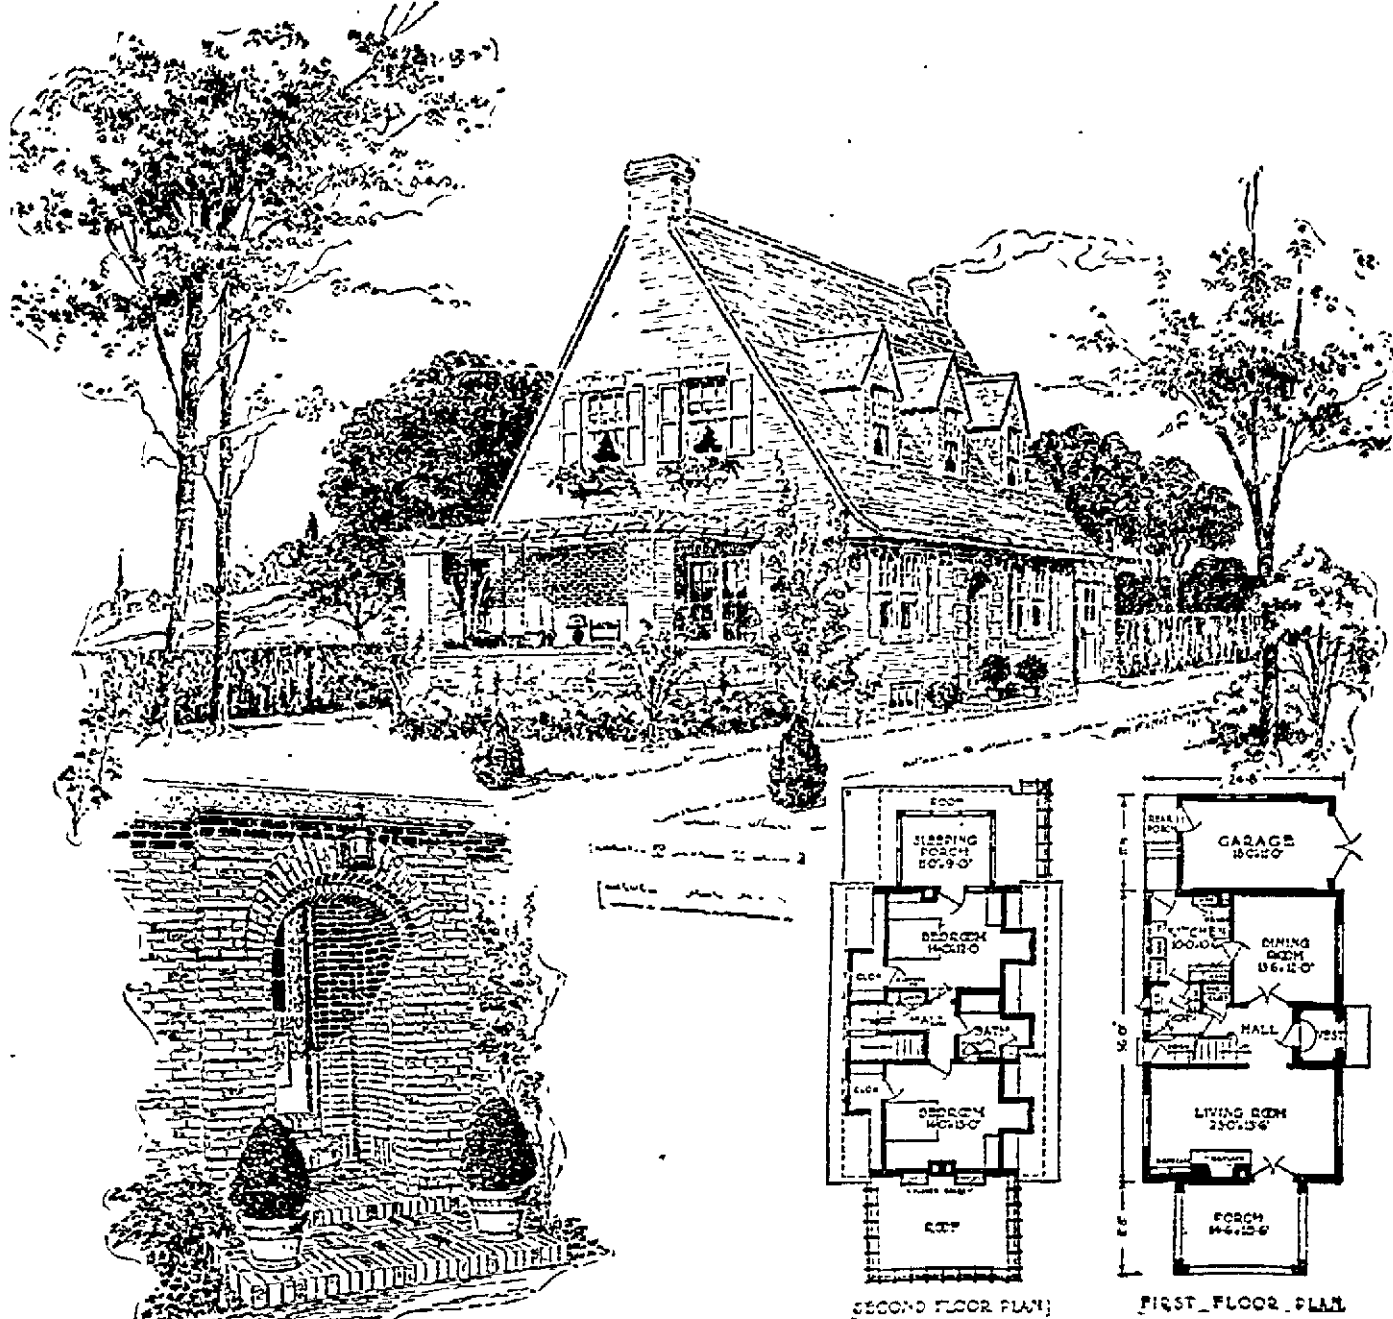

Building for Sentiment or Profit.

Probably the most important consideration is profit when building a home. The joy, the happiness, the contentment, the sense of security, the pride, and a host of other considerations depending upon home ownership, often entirely outweigh the profit idea. Your home expresses your individuality. Your garden, flower beds, lawns, fire place, decorating—these and many more are expressions of your personality and taste. There are many cases where individuals are engaged in commercial ventures from which they receive a large percentage for money invested. Sometimes this percentage is so large that home ownership, by comparison, has no financial inducement, and in such cases it may be cheaper to rent than to build. Because of the fact that home ownership has more to it than the mere financial side, even those who can make more money by renting are usually home owners.

It is usually less expensive for a salaried man or a man with limited means or income to build his own home.

Bearing in mind that home building is a business investment proposition, plus a matter of sentiment—that it is a profit-sharing plan in which you pay yourself dividends, and that on the other hand renting for the landlord is also a business, and must pay him dividends,

An Attractive Type of Home

you have but one consideration—it is simply a case of whom you wish to pay dividends to—the landlord or yourself. And also whether you wish to live in a house or a home.

House or Home?

For the sake of argument let us suppose that you have a savings account that might be used as initial payment on a home. Your desire is to increase the earning power of your savings. This is natural. But if you are paying rent you are actually losing from two to five per cent on your savings just because you are living in the landlord's house. Remember it is only a house. But if you invest your money in a home you stand to make from seven to thirteen per cent on your money, and you have a home, plus your interest.

CHOOSING THE SITE FOR YOUR HOME

Character and Location of Lot Are
Shown to Have a Very Direct Bearing on Financing of the Home and Future Sales Value.

The best plan is to deal with reliable owners, agents, and real estate men who pride themselves on their reputations, and whom you can count on. Generally speaking, those who have property for sale are prone to excessive enthusiasm when prospective buyers appear on the horizon.

This by no means implies that dealers in real estate are not honest. Quite the contrary, it means that dealers with established reputations for fair and honest transactions think more of their reputations than of the commissions to be derived from the sales. Look for the man with a good reputation and you can rely with considerable safety on his judgment and advice.

If possible go to a Realtor. The Realtor's business is usually conducted on a nationally accepted code of ethics. These ethics bind him to certain requirements.

Consider carefully the purchase from a standpoint of improvement, building restrictions, or possible assessments for new sidewalks, curbs, gutters, or roadways. Investigate the possibility of railroads, trolley lines, or other public utilities of a like nature approaching your property. These may be either detrimental or may add to the value of the lot, depending upon conditions. The village or city plans may contemplate a boulevard or parkway project which will affect the value of your property.

Be sure that no one has the right to erect wires or to install water pipes, poles, etc., on your land after you have paid the purchase price. Such easements might prove a very serious inconvenience as well as costly, if the work was carried forward after you had the property fully improved.

If your lot is improved, the purchase price includes the value of the improvements, and you should therefore be free from further assessments. On buying a lot in a location where well developed or in the process of being developed, you are thus protected and assured of a consistent increase in land value.

When building, it is not good business policy to build a house too large to be consistent with the neighbors. The house must not be too high-priced, considering the cost of the lot. On the other hand the house should not be too cheap as

compared with the lot. Roughly the cash value of the lot should be the influencing factor as to the amount of money that should be invested in the house. The lot will increase in value faster than the house, but on the other hand, a house fully in keeping with the lot will do much to assist the increase in valuation.

The contract—the next consideration after selecting the lot—is a point that should be carefully handled. You pay a certain percentage of the purchase price—usually about ten per cent—the contract is then binding, usually for thirty days. This permits you to have the title searched for flaws and claims against the property. After completing the sale be sure to have the deed recorded with the county authorities. If you wish you can have your title insured against future claims which may arise, due to undiscovered defects in title. It is absolutely necessary that your title be clear if you hope to borrow money on your property.

THE VALUE OF PAINT

Citing Some of the Reasons Why
Paint Increases the Value of
Your Property.

It is surprising how prevalent the idea is that paint is merely applied for the sake of looks. Therefore, many persons have come to regard paint as more or less of a matter of artistic expression and have relegated it to the realm of luxury.

Exposed wood quickly deteriorates. Prolonged neglect will mean a repair bill. Paint is by far cheaper than repairs.

Paint has a curious effect. Many an architectural eyesore has been entirely changed within the space of a few days and has become an asset instead of a liability to the community and its owner. On the other hand many an architectural masterpiece has been ruined beyond hope of repair by the lack of paint used at the right time.

Painting serves three very fundamental purposes. It protects the woodwork, it adds cash value to the home and lot, making the home an asset to the community, and it establishes a firmer credit rating for your home.

Any banker will tell you that well-painted buildings are an indication of thrift. Appearance in many cases may make or break the business transaction.

Selecting the Paint.

This is a point to which you should give careful consideration. The paint should not crack, blister or peel. If, after painting the surface is not in a good condition for repainting, then you can rest assured that good paint was not used and was possibly incorrectly applied. It is much cheaper to paint well-colored, dry lumber than it is to paint weather-beaten, exposed lumber. In painting your home be sure that the painter covers up all knots with a coat of shellac, applied immediately before painting. Do not allow painting to be done in damp, cold weather. The wood surfaces should all be cleaned and thoroughly dry. Do not allow the exterior painting to be applied until after the plastering on the inside walls has had ample time to dry.

A separate article in these columns will tell of the choice and use of paint for interior work.

FINISHING OAK FLOORS

A Few Practical Hints Which Will
Enable You to Keep Your Floors
in Perfect Condition.

The finishing of an oak floor is a most important feature, involving best color and finish desired. Personal taste and artistic or decorative effects wished are the guides for the floor finisher.

First—Treat the floor with a paste filler of desired tone, to fill up the pores and crevices. To thin the filler for application, one has a choice of using turpentine, benzine, wood alcohol or gasoline to get the right consistency. Never use a liquid filler. When the gloss has left the filler rub off with excelsior or cloth, rubbing against the grain of the wood. This will make a perfectly smooth and level surface. It keeps out dirt and forms the keynote of successful floors. Allow the filler twelve hours to set or dry. Then apply two coats of white shellac before applying the wax treatment. When varnish is to be used, give one coat of filler and one or two coats of varnish.

Either a wax or varnish finish may be used. The wax finish is preferred by many, due to economy and ease of renewing places that show wear. The renewing may be easily applied by housekeeper or servant.

WAX FINISH—The best method of applying the wax is to take cheesecloth and double it to get added thickness; then fold into a sort of bag. Put a handful of floor wax inside and go over the surface thoroughly. It will be found that the wax works through the meshes of the cheesecloth and gives an even coating over the floor. This

What Could Be More Beautiful Than an Oak Floor?

prevents waste and excessive wax in spots. After the floor has been gone over with the wax and allowed to dry about twenty minutes, it is ready for polishing. Rub to a polish with a soft cloth or brush. First across the grain of the wood may be used in place of the brush (if desired); then a piece of woolen felt or carpet should be placed under the brush to give the finishing gloss. After waiting an hour, a second coat of wax should be applied in the same way and rubbed to a polish.

VARNISH FINISH—This is usually more expensive than the wax finish, but it gives a very hard surface, which at the same time is elastic. One or two coats should be applied after the application of the paste filler. Any of the standard hardwood flooring varnishes will give good results.

To a lover of woods nothing could be more beautiful than an oak floor. It satisfies all the demands as regards permanency, wearing qualities and beauty. It lends a sense of pattern to the bare floor and makes of the floor itself a distinct element in the decorative scheme of the home.

A wood of less noticeable grain tends in some cases to become monotonous owing to its absence of pattern and variation in tone.

By following the suggestions as outlined above, one is assured of very gratifying results.

CEDAR-LINED CLOSETS

A Protection Against Moths, Buffalo Bugs, and Other Destructive Pests.

Cedar has long been used in the making of clothes chests of all kinds. No housewife need be told of the value of this wood in the protection of furs and other items of wearing apparel against destructive pests. The cedar chest may serve quite as well to protect against the inroads of these pests, but on the other hand, has decided disadvantages as regards storing of clothing.

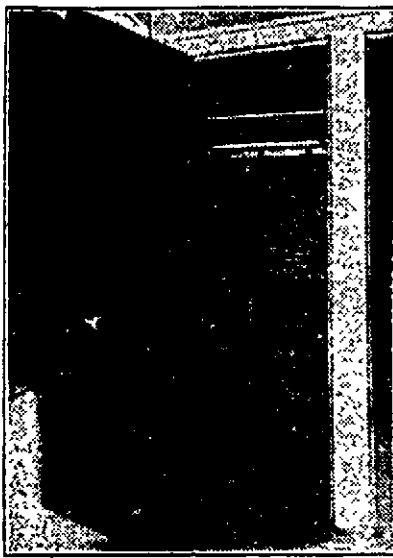

Every housewife has had the experience of digging frantically through her cedar chest in search of an item of apparel or possibly a woolen blanket, only to find that it had been buried way down at the bottom.

The advantages of the Cedar-lined closet is especially

interesting to the housewife during those months of the year when she must store garments away. In the fall she puts aside the summer garments and in the spring the woollens and furs.

Such lining can be applied either to new or old closets, but, of course, the ideal time is during the period of construction. Provision is made for sealing all joints, and the ends as well as the sides of the individual pieces are matched. This insures very tight construction.

The floor as well as the shelves should be of cedar. The comparatively small expense of Cedar-lining

Cedar-Lined Closet.

your closets becomes an investment instead of an expense when you realize the fact that in one winter you may have destroyed by moths, if you are storing your clothing in an ordinary closet, more than the entire cost of installing Cedar-lining in all your closets. Looking at the matter in this light Cedar-lining becomes ideal insurance for the protection of your investment in clothing.

THE HOME GARDEN ALL ABOUT RADISHES

Choosing the Proper Varieties for
Your Particular Needs.

The radish has been cultivated in gardens since remote times. The Greeks served it on gold plates in sacrifices to Apollo. Pliny tells of radishes in Rome that weighed 40 pounds. It was introduced in England in 1500. Queen Elizabeth had the choice of four varieties, each of which no doubt some one considered to be the best. The varieties we now enjoy are the lineal descendants of those historic sorts, and each has points of peculiar merit, otherwise it would be quickly abandoned.

Modern improvement in the radish has been along the line of shortening the season to maturity, and quick growth has been accompanied by a shortening of the root, producing the olive and globe-

tions, which for radishes include a rich, loose soil, plenty of water and cool weather. They cannot be grown in our summers.

Market gardeners usually avoid these sprinters of the radish tribe, and sow such second earlies as Early Scarlet Globe, which matures in 25 days, and Scarlet Turnip White Tip, which takes 28 days to mature. Both of these remain edible longer before turning pithy.

The older type of long radish, with a tapering root, matures in from 30 to 45 days, and remains a corresponding time without becoming pithy, so these are relied upon for producing a succession of crops in the garden. The most popular long variety for home garden use is 'Globe', maturing in 40 days, some reaching five and one-half inches in length. All radishes, it must be understood, may be eaten before they mature, and in the home garden are to be preferred so.

There are globe-shaped radishes of longer season, growing much larger than the early types, such as Crimson Giant, maturing in 42 days, and White Box, maturing in 45 days, and growing to two and one-half inches in diameter. White Strasbourg is a long white summer variety growing large, and maturing in 40 days, and Chartier is a still later and larger red for hot weather growing.

THE ATTACHED GARAGE

Some of the Advantages That Are
Possible From an Attached
Garage.

At the present time there is probably no one influence that affects home building so much as the automobile. With the automobile have come conveniences little dreamed of a few years ago.

The attached garage is but a natural outgrowth of circumstances. The automobile has come to stay. The advantages of having the garage as close to the living quarters as possible are obvious. The disadvantages of the detached garage are equally obvious. Anyone who has had experience in the matter knows how the detached garage makes necessary added expense and cutting up of the back yard and spoiling of the garden. The problem has always been one of finding a place for the garage most accessible to the house and yet interfering to the least possible degree with the arrangement of the yard and the garden space. With the garage planned as a part of the house, a layout is made possible that is at once orderly and convenient and at a reduction in cost.

Time was when the detached garage was an absolute necessity. Like all new developments the automobile came faster than home building and for the time being at least, attached garages were out of the question. This article, therefore, pertains more to home building from now on.

The attached garage, because of its construction, saves one wall, which is quite an item. There is a

board with cement plaster. From the standpoint of cost, the cement plaster is much to be preferred over concrete, being only about half as expensive. In addition the garage which has a direct connection with the house must have a fireproof door and be equipped with a fusing link. This link will fuse and allow of the automatic closing of the door in case the temperature rises beyond the danger point. In some cases this specification of the underwriters has been complied with by having a separate entrance to the garage and house, covered by a common canopy.

Many other advantages are to be associated with the attached garage, such as, for instance, convenience and comparatively low cost of heating. The unattached garage must have its separate heating plant as a rule, and usually even then the temperature is so low in the winter time that starting the car is difficult. The cost of heating the attached garage is much less owing to the fact that it is accessible to the heating plant, and having possibly only two walls exposed to the weather.

The necessity and expense of a driveway running to the back of the lot is entirely eliminated. The yard is left intact, and the garden is not encroached upon.

The conveniences added by means of the attached garage, more than double, in the opinion of many, the advantages of the automobile. To be able to actually step from the inside of one's home into one's machine without going out of doors is a definite luxury. To know that a distinct saving has also been made, adds, if anything, to the feeling of satisfaction.

The matter of design can be so handled that instead of the garage seeming to form an addition to the house, it will actually become a unit of the house and have as distinct an architectural meaning as the front door itself.

Architecture defined in a broad sense is a conforming of the lines of the house to the requirements for beauty, while at the same time taking care of the comfort of the occupants of the house. Just where the garage should attach or become a part of the house depends entirely upon the house itself, and is a matter to be decided between the owner, architect or contractor.

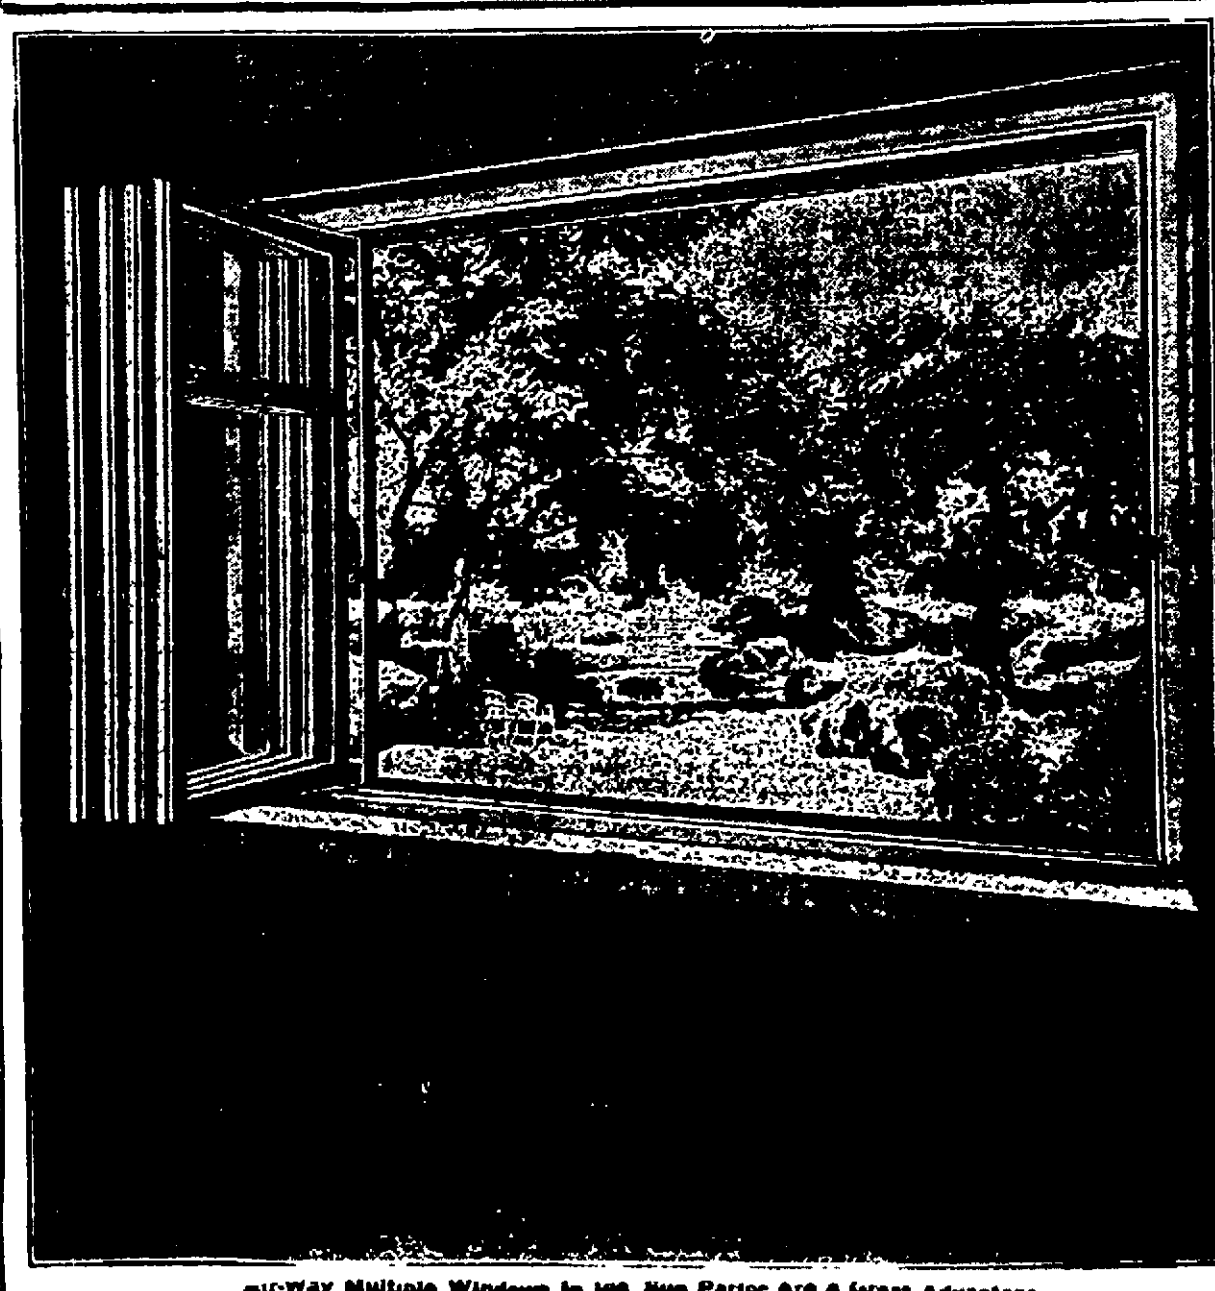

SEED SOWING TECHNIQUE

There is quite a trick to sowing seed evenly and thinly, but it is easily done when you know how.

Professional gardeners who have large quantities of seed to sow usually use a wheel hoe with a seeder attachment or a seeder horse drawn. However, when the seed is to go in boxes or hotbeds or in small quantity, he sows it direct from the packet with a steady motion that drops the seeds evenly and not too thickly in the row made for it.

First of all, after prying the flap loose or cutting the edge of the packet, make a crease in one

The Sun Parlor

Runway Multiple Windows in Sun Parlor Offer a Many Advantages.

shaped types. Ancient radishes were larger, longer, stronger and slower of growth. The fastest growing variety now known is an olive-shaped variety, called Earliest White Olive, which matures in 15 to 18 days after sowing. A red olive variety, generally known as the 20-day radish, is next, maturing in 20 days. These very rapid-growing varieties have the defect of most slenderly simple. Primarily, all that is necessary is that the garage and the main house have a separating wall of brick or masonry, and that the ceiling of the garage be reinforced with concrete or plaster

distinction which must be borne in mind, however, when speaking of the attached garage. This does not refer to the garage as a center portion of the house necessarily, but rather a garage which is a part of, or forms a continuation of the house. This distinction is necessary, owing to the underwriters' specifications which must be considered. They are, however, astonishingly simple. Primarily, all that is necessary is that the garage and the main house have a separating wall of brick or masonry, and that the ceiling of the garage be reinforced with concrete or plaster

side of it so that when you hold the edges between the thumb and second finger, the forefinger being above it, the opening will be almost triangular, the edges of the packet being held firmly enough to force the crease apart so that it makes a trough down which the seed may flow.

Now tilt the packet gently and tap it with the forefinger, which will be free above it. With a little practice you can move along a row tapping the packet regularly and the seed will trickle out as fast and as thickly or as slowly and as thinly as you desire.

The Interior and Exterior Appearance of Your Home

Reflects Your Pride of Possession

Home is more than just a place to live in. It is a shrine of family life. However elaborate or humble, it fairly mirrors the taste, even the character of its occupants.

The exterior of your home will not grow old and unattractive when it is painted to prevent decay. It is your best insurance against deterioration.

Then, too, consider the interior of your home. Here paint, varnish and enamel will work wonders. They not only brighten and beautify but they lighten the house-work—for a painted or varnished surface is much easier to clean and keep clean.

We hope all Home Lovers will take the opportunity to see the Own Your Own Home Film "The Great Idea" showing at the Elite Theatre May 26, 27 and 28. Then stop at our store and see our assortment of Colonial Wall Papers such as used in the Most Perfect House in America.

Let us help make your house a home, cheery, comfortable, inviting.

PARKWAY LOT SALE

Sunday, May 25th to Sunday June 1st Inclusive

Just A Neighborly Walk From Downtown

Parkway Plat

Only 100 Lots Left

30 On The Boulevard

Prices \$100 to \$350

Terms 10% down. Bal. small monthly payments

Contractors — Homeseekers — Speculators — Investors. Your last
chance to get good lots in Appleton at such low prices.

All large lots.

City busses now running to Second Ave.

City officials promise adequate sewer and water facilities.

New East End Junior High School, Franklin School and site pur-
chased for New Catholic School near by.

Erb Park within two blocks.

Black walnut trees planted on each lot.

Warranty Deeds, Merchantable Abstract of Title issued without
cost.

All streets graded to grade.

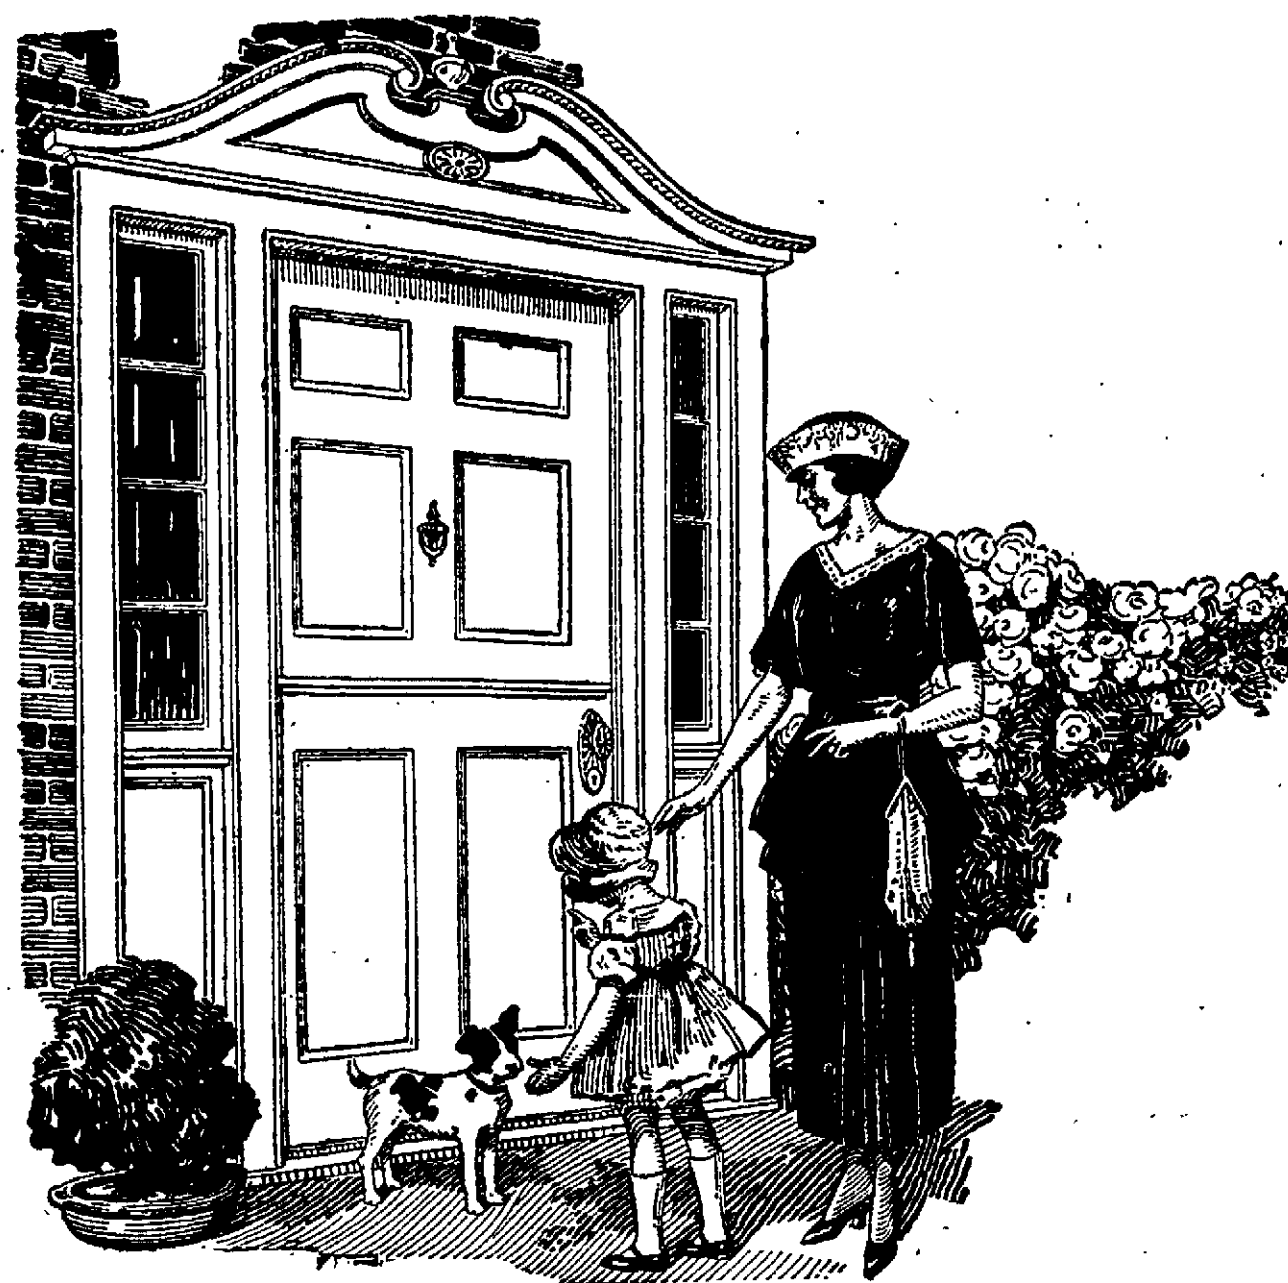

How to get there:—Take any street North (from Appleton to Rich-
mond Sts.) to Parkway Boulevard. Or call at our office or Phone 2813
and we will call for you. Salesmen on the ground every afternoon and
evening. All lots for sale plainly marked.

SEE SMALL CHANCE FOR REDUCTION IN COST OF BUILDING

Now Is As Good a Time As Any
to Build New Homes. U.
S. Expert Says

BY CHARLES P. STEWART
Washington—If you can guess how long prices generally will stay high, you can judge pretty accurately how long your landlord will keep on seeking you, for rent, on your house or flat, about what you're paying now. But you CAN'T guess, points out Dr. J. M. Gries, chief of the commerce department's division of building and housing, because nobody can tell how long money is going to continue being affected by the World War.

WHAT TO CONSIDER IN BUYING A HOME

- Before you buy a home, these are the important points to consider, according to a recent bulletin issued to prospective home buyers by the U. S. Department of Commerce:
1. General location, including surrounding land values, transportation facilities, restrictions, zoning and fire or police protection.
 2. Specific location of house, including character of neighborhood, proximity of schools and appearance of the lot.
 3. Extent of street and other improvements.
 4. Possible assessments.
 5. Checking surrounding property values.
 6. Plan of house and quality of construction.
 7. Financing of home—kinds of mortgages, length of life and cost of their maintenance.
 8. Examination of title.

have risen before and then slumped, he admits, but sometimes they've STAYED up; this may be one of those times.

So, from the standpoint of a family that wants a modest home of its own to live in, it's a good time to build.

Dr. Gries doesn't see much hope for the tenant for some time to come.

That is to say, not for the tenant of moderate means—on an income, say, up to \$5,000. Rentals on the type of houses and apartments the rich can afford have shown somewhat of a downward tendency lately, but not rentals on accommodations suited to the purses of the "middle class."

There's an undoubted shortage in "middle class" houses. Then why don't landlords build, to meet it?

"They say," explains Dr. Gries, "if we knew prices were up to STAY up,

DON'T SHUT OFF WINDOWS IF VIEW IS BEAUTIFUL

Do not cover the windows in the dining room too well, especially if there is an attractive outlook. Start the day seeing all the available brightness, which is not possible if the windows are hidden in layers of materials.

If the outlook is not attractive cover the windows by all means, making the interior as charming as possible. A bit of the out of doors early in the morning is always refreshing and if the dining room curtains are left open giving this sort of view it is always desirable.

Two sets of curtains may still be used—the glass curtains and the overhangings, even if the first curtains do not cover the entire window.

YOUNG GIRL'S BEDROOM MAY HAVE MANY FRILLS

All the frilly frivolousness ever conceived may be put into the curtains in the young girl's bedroom. Sheer materials, with frills and ruffles, tied back with gorgeous "tiebacks" may form the only curtains used, or these frills may be used on the under curtain only.

If thin glass curtains are used directly over the window panes the over curtains may fall heir to the frills and ruffles. The overhanging of taffeta in any of the pastel shades which may take the fancy of the occupant of the room may have a ruffled edge and a shirred and ruffled valance, which may be repeated in the bed coverings. These curtains may be held back with a three inch bundle of material also having a tiny ruffle.

We WOULD build, but we haven't risk building if, just after we've finished, prices are coming down again. As for building materials, wholesale prices, which stood at 188 in January, 1923, were 181 in January, 1924; whereas retail prices, which stood at 195 in January 1923, were 204 in January, 1924. This doubtless means a slight decline in the long run, though retail prices have lagged behind.

Dr. Gries sees a little comfort for the "middle class" tenant in the fact that the rich, at least, are building, which suggests that they'll be moving soon into new and costlier homes, leaving their old ones vacant, with a chance for the whole line below them to move on up a little.

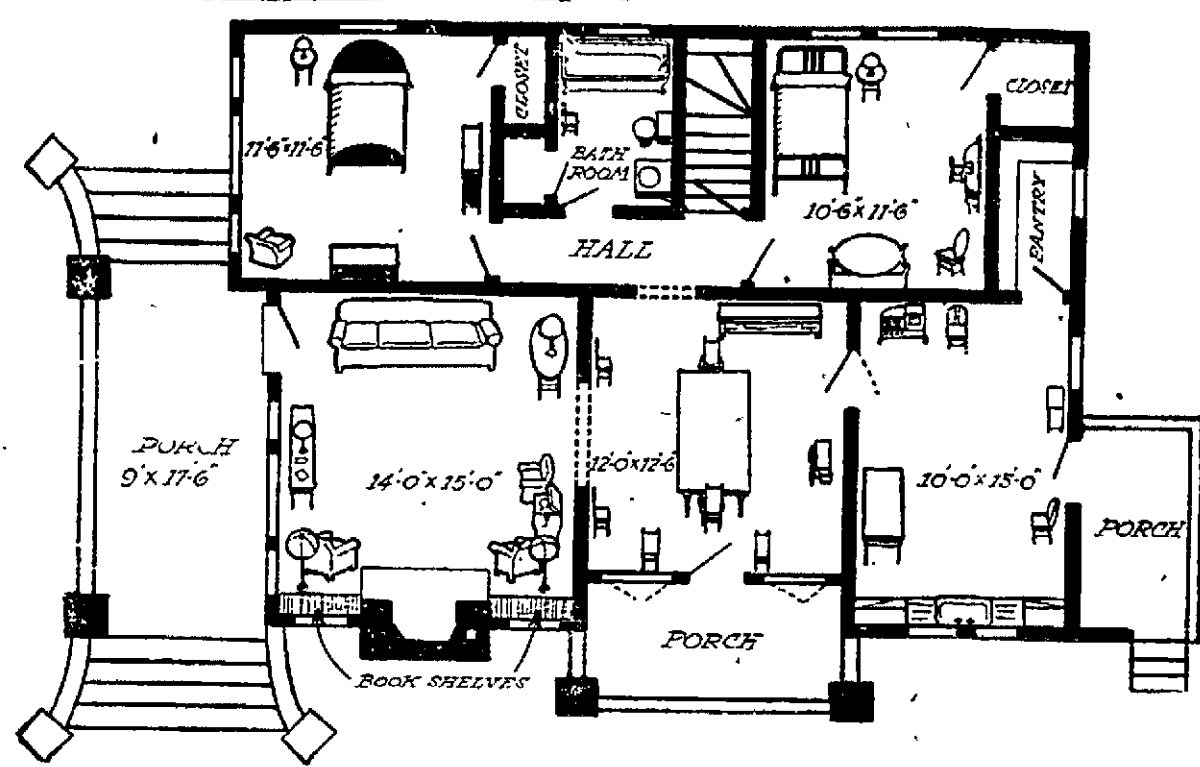

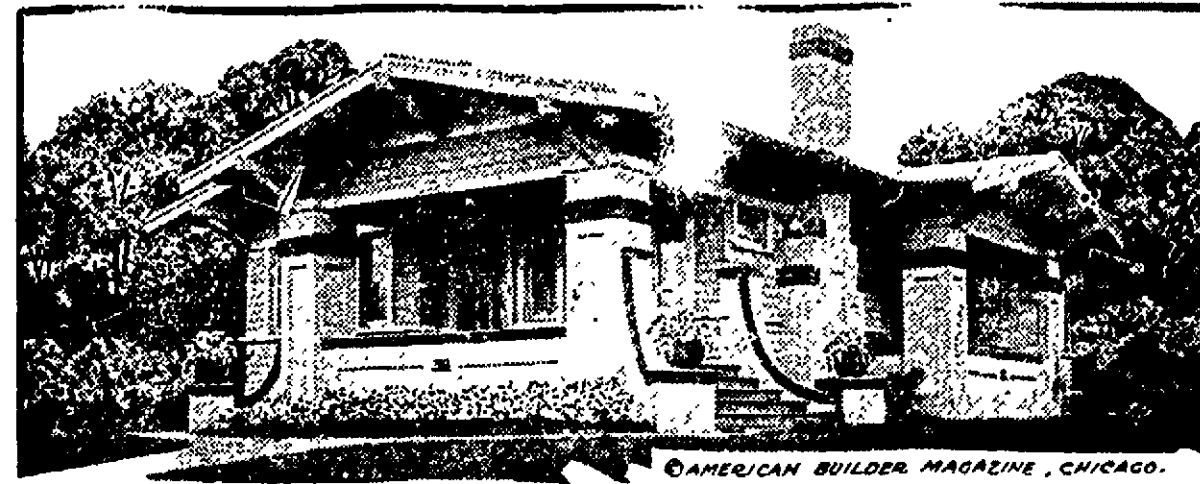

If hard times should come, there almost certainly would be a doubling up of families, and this, too, would make more room; it might be followed by quite a sharp slump in rents. But that wouldn't be an improvement—with hard times.

Finally, improving building methods, labor-saving machinery, standardizations, the broad general progress of the industry may have their effect, but Dr. Gries calculates this over a 10-year period, at least, so it doesn't signify much for the immediate future.

And anyway, he asks, what good will lower rents do unless INCOMES stay up?

All in all, now's a good time to build a house—to live in yourself!

The Bungalow Spells Home

THE FIVE-ROOM BUNGALOW AND PLANS

Real home atmosphere is brought out effectively by this singular bungalow. Its curving lines, simple ornamentation and quaint design literally invite visitors and promises a cheerful welcome.

The design, at the same time, gives the impression of substantial, massive comfort. Yet it is planned to cover a small inside lot, instead of the large corner lots usually necessary for the average bungalow.

The floor plan shows a systematic, economical arrangement of rooms, with bedrooms isolated from the rest of the house and reached through the dining-room only.

Wonderful furnishing opportunities can be had in this living room, due

to its two unbroken walls and its nearly square dimensions. A suggestion for furnishing is given, although the sofa, for instance, can be put in place of the table in the front window. More chairs can be kept in the room, if needed, although a room with little furniture is much better than one cluttered up.

Similar furniture layouts are suggested in the other rooms.

A French door divides the living-room from the dining-room. The French effect is carried further into the dining-room by the French windows which can be thrown open in summer to afford a pleasant dining place.

The extra porch from the dining-

room is another pleasant feature. Housewives will like the kitchen for its square, roomy character, although it is not too large to make kitchen work tedious. The pantry relieves the necessity of filling the kitchen with pantry shelves.

The best part of the kitchen, however, is the window-lit sink—a helpful feature to the woman who knows what it means to work at a sink which is darkened by her own shadow from the center ceiling light.

The outside dimensions of the entire home is 28 feet by 40 feet. In Chicago, where building costs are high, construction of the home alone would amount to about \$7,000.

ENCLOSED PORCH A GREAT COMFORT

Extra Room Is Provided for
Summer and Winter—Part
of Family Life

Time was when the family sat uncomfortably on a front porch in hard porch chairs armed with a palm leaf fan with which to fight mosquitoes and other insects incident to a warm night. If the porch faced west and it was too warm to sit there the family gathered on the side stoop and sat there in varying degrees of discomfort until it was time to go in.

Porches are now more than mere entrances. They have been taken into the family life as a definite extra room by enclosing or screening the porch and equipping it with the essentials of an outdoor room. The first essential of the enclosed porch or outdoor living room is comfort and the first necessary thing to do is to screen it as a protection from insects; the next thing is to fit it with porch furniture of which there is such a pleasant variety, and it should be provided with outlets for electric fan or table lamp. The porch should have at least one outlet in addition to the electric light outlet, placed about a foot above the floor so as to be protected from contact with water when the porch is washed.

Wickerware or reed furniture, a swing couch hammock and plenty of gay cushions make the porch a pleasant place for the family to gather in the evening. When friends are entertained, there is a delightful informality about a comfortable living porch not rivaled by any indoor room. For the evening visits of friends, a soft cheery atmosphere is desirable and is supplied by table lamps, or floor lamps.

Music adds greatly to the life of a party, so the phonograph with its electric motor may be moved to the porch and attached to the handy outlet there. A wicker flower stand to hold potted plants or a vase of fresh flowers on a wicker table will supply a decorative and colorful note. If refreshments are to be served a tea wagon is wheeled out on the porch. A plug cluster screwed onto the underside of the wagon, that is, underneath the top tray, makes it a simple and easy matter to use various electrical appliances such as a tea samovar, coffee percolator or chafing dish.

The porch living room has very practical daytime uses. Here with the electric sewing machine the summer sewing may be done in comparative comfort on warm days. Awnings can be let down in daytime that protect from the heat of the day. The portable sewing machine cover and all weighs less than a packed suitcase. It can be carried wherever one wishes to sew. Attach it to any convenient outlet and electricity does the really hard work of pedaling the machine.

Building And Loan Assn. Has Helped Build 216 New Homes In City In 5 Years

There are 216 families in Appleton who perhaps would not be among the city's home owners today were it not for Appleton Building and Loan association, an institution created for those whose only opportunity to build is to borrow a large part of the money and pay it back in small amounts.

That number of home owners has obtained loans from the association for homes since it was founded in April, 1919. The first appraisal committee consisting of Charles A. Green, L. O. Hansen and Philip Welfenbach, approved 11 loans on April 20, 1919, amounting to \$2,000. That was the start of the association and it has loaned home owners to date \$555,937. This is being paid back in monthly installments and the repayments now total \$36,650.

People who desire to own a home some day are permitted to buy shares in the association of \$100 each by depositing 50 cents, \$1 or more a month and allowing the amount to accumulate until they are ready to build. The association then loans them the balance and it is repaid in stipulated amounts. The savings thus deposited earn interest at 6 per cent compounded semi-annually. Every dollar placed with the association earns interest. Earnings paid to shareholders to date amount to \$24,015 and there will be another distribution of dividends July 1 totalling more than \$10,000. The association started with 25 members and now has 526. Some of these already own their homes but invest their savings in installment or rapid shares merely to receive the benefit of the interest.

Stringency in the supply of homes just after the war actuated the formation of the association. John J. Sherman, president of the Citizens National bank, called a number of business men together and voiced his conviction that many people would build homes if they had financial assistance such that they could borrow money and pay it back in amounts about the same as the monthly fee they were paying for rented homes. Their vision has been rewarded with more than 200 homes that sprang up in various parts of the city. Where home building corporations, industrial home-building and other such plans were proving a problem and were rejected as unwise to attempt here, the building and loan association functioned with success and received endorsement of business men, the chamber of commerce and others.

The original officers, directors and shareholders were John J. Sherman, now is president, George H. Beckley, now managing secretary, H. G. Sackler, J. L. Jacquet, Charles A. Green, H. R. Kranzsch, H. A. Gourdeman, L. O. Hansen, M. E. Barreau, J. J. Plank, W. J. Keadar, Jr., G. A. Schmidt, Walter Joyce, A. W. Beck-

ley, J. J. VanOoyen, H. F. Heckert, W. F. Kamps, T. A. Jacobs, James Monahan, P. A. Kornely, Theodore H. Belling, Daniel T. Steinberg, F. S. Bradford and John Balliet.

Operation of the association is in strict conformity with rules of the Wisconsin banking commission at Madison, under which it is chartered. State examiners go over the books at regular intervals to see that the loans are conservatively made and that the funds are handled as the law requires. The movement is growing every where once people find out how easy it is to finance purchase or erection of a home under the association's plan. More home owners have been created in this way than almost any other. The Appleton association invites people who desire to own homes to consult with any officer or director, or obtain information from its office in the Insurance bldg.

CORRECT RUGS ADD TO HOME'S BEAUTY

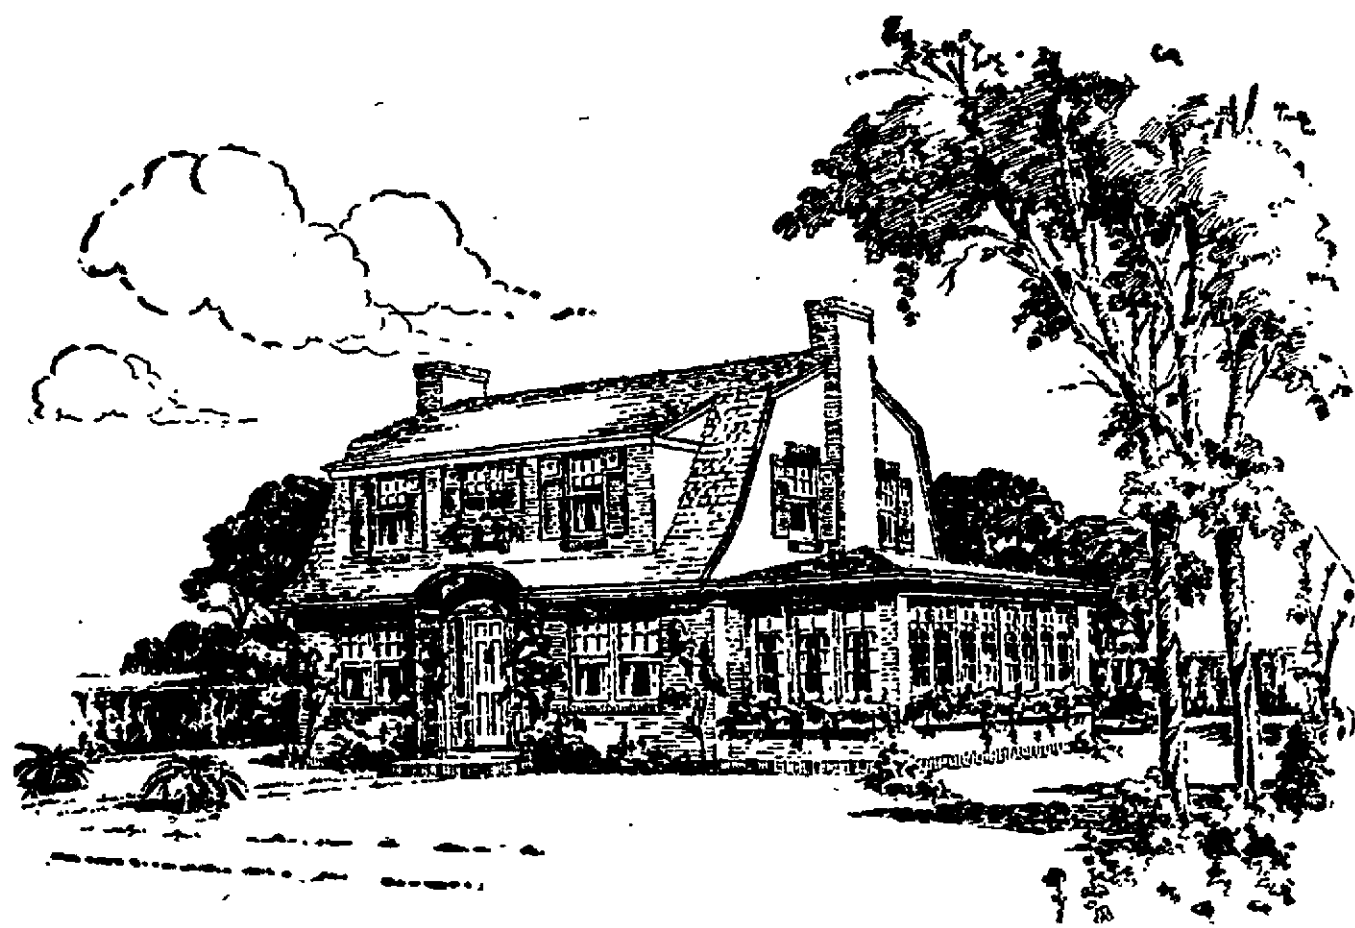

If you think that orientals are "the thing" and have squandered your money to buy the limitations, so inferior in color and texture that they deceive no one, discard them or dye them, unless you are able to use them as color suggestions and by a careful assembling of colors in the room harmonize the room with the rugs—or attract attention from them. They probably do most of the shading.

Good decorators care little for orientals. Their design hampers the use of handlines which decorators like to accept, prevents the free use of design and limits one in color. The plain rugs give the plain background needed for contrast. Orientals in living rooms make people aware of their feet, either because of the slipping of small rugs or the attracting of the design. The small ones are so hard to harmonize and so inadequate for covering, for instance, a living room.

If you must have design, use genuine orientals in room size rugs in dining rooms, where there is little furniture and preferably no pictures. The floors may then be decorative, provided walls are plain and neutral.

Not all genuine orientals are good in design or in color, though the Persian and the Chinese rugs, especially the latter, are likely to be among the most beautiful rugs in the world.

If the floor is light in finish and you have a vacuum cleaner, carpet them entirely with plain Axminsters, Wiltons or chenilles, though rugs in quiet designs are more practical, as they do not show dust or footmarks. If you have no vacuum cleaner have room size rugs made of chenille, preferably Scotch wool or flax.

Homes Built To Your Order

Plans of various types of homes submitted and redrawn to conform with your own ideas

Building Transactions Financed

New Homes in The Cities Finest Locations

We purchase at all times many very desirable building lots
If we can help you in finding a location for your home
please feel free to call on us.

If you contemplate the purchase of a home this year it
would be well to consult with us and let us help you in
your plans and have them finished to suit you.

OPERATING THE HOME ON AN EFFICIENCY BASIS

Efficiency and Economy Are by No Means Restricted to Business.

The home is, or should be, a paying proposition. To a large degree this depends, however, upon the arrangement of the house and the labor and time-saving devices found in it.

Considering that the housewife spends over 75 per cent of her time in the kitchen, for our purpose we are considering the kitchen as the center of the home. In reply to a prize offered for the best answer as to why women buy and desire such things as washing machines, vacuum cleaners, electric dish washers, and other appliances, the consensus of opinion indicates that women want such devices not only because of the labor saving involved, but because of the time saving that is permitted.

This leaves the housewife with more time to devote to her personal well-being and the pursuit of social enjoyment, study, clubs, politics, recreation, etc.

How Many Miles Does a Housewife Walk in a Year?

Numerous experiments have proven that many housewives walk a total of more than one hundred miles a year while doing their housework. The dimensions and arrangement of the kitchen, therefore, play a very important part in the distance traveled.

Considering all these things it seems advisable to have, in the majority of cases, the kitchen small rather than large, and oblong rather than square. Every kitchen should be a complete working unit within itself.

Detached pantry a needless waste of energy.

The kitchen should be so arranged that following the meal the steps taken up to the time the dishes are again stored away for another meal be in a progressive direction. That is, from table to work table, or counter for soiled dishes, to sink, to drainboard, to china closet. Usually a routing of this kind leads from left to right in the kitchen.

The china closet should be situated conveniently, both to the sink and the dining room.

Cupboards are, nowadays, placed in the kitchen itself as close as possible, considering arrangement, to the work table. Frequently the work table forms a shelf under the sink, and is reached by a step up to the cupboard built into the wall. The old-fashioned pantry which separated the kitchen from the dining room should be eliminated as it causes an unnecessary number of steps. The space that has been devoted to pantries can be more profitably used for the addition of other rooms to your house.

The main idea behind efficiency is to group your tools and working paraphernalia about your chief point of activity. This naturally means that each utensil or device should be so located that it is quickly available at the place where it is most frequently used. The sink should be located during the day it receives plenty of daylight, and at night artificial illumination without working in your own shadow.

The height of the sink is an important factor. Frequently the sink is set too low for convenience. The height should be such that, when the hands are bent over the sink, the elbows are at right angles to the body. This means that the sink is at least 36 inches high, or 38 inches if the person is tall. A sink which is too low causes a strain on the back and arms, and it has not enough draining space, or is so shallow that the water flows out.

From 24 to 36 inches from the floor to the top of the rim is considered, usually, the proper height for the sink. One way of determining the proper height of the sink for your individual requirements is to have it so that when you stand erect with your arms and hands before you your finger tips just touch the bottom of the sink.

Two drainboards will surprisingly speed up dishwashing. A series of shelves above and to left and right of the sink are often times quite an added convenience. At this point it is advisable to call attention to the necessity of having the sink and other plumbing fixtures so grouped in the house that a wide ramifications of the plumbing pipes is not necessary. For instance, with a sink located on a wall adjacent to the corner of a room, the plumbing pipes can be run directly below or adjacent to the wall carrying the plumbing pipes going to the bathroom, very short laterals are required to carry the hot and cold water to the various fixtures, as well as equally short returns for the drain pipes. By following this advice a considerable saving can be effected on the plumbing. This is one of the prime essentials in good home design.

The Function of the Rear Entry.

The rear entry or vestibule serves a number of very important functions. It provides a convenient place for the refrigerator and makes possible the delivery of ice and groceries without tracking up the kitchen. The rear entry also serves the purpose of the storm door arrangement, keeping drafts from the kitchen.

Art in Paneled Walls

PANELED CEILINGS AND WALLS

There Are Many Occasions When Wallboard Is More Desirable Than Plaster. Especially So in Finishing Off Attic Rooms.

We have become so accustomed to the use of lath and plaster for the interior finish of houses, for walls and ceilings, that when we contemplate building a new home or remodeling an old house, we give less thought than perhaps we should to what the wall material will be. We realize that if the house is newly built and is plastered, the probabilities are strong that within six months minor cracks will appear in all of the ceilings and walls. In some cases, no matter how we try to repair these cracks, they eventually show through the decoration, whether it is paint, caliche or wallpaper.

This is not the fault of the plaster as plaster is not an elastic material, and when the house settles or the studding in the walls dries out, composition plaster is likely to crack under the strain.

Wood fiber board is being recognized more and more as a permanent wall and ceiling material, and may be used, at the discretion of the builder, in place of lath and plaster. There are many wallboards on the market, some of the best being made of pure ground wood, triple sized to reduce expansion and contraction to a minimum. It comes mill-primed ready for painting or calicheing, thus saving the cost of the sizing coat. It has a very attractive surface known as natural finish, which takes decoration beautifully.

It is applied direct to the new work or over the old plaster, in a case of repair or alteration work. It has other advantages besides permanence, in that it enables buildings to be completed quickly; there is no waiting for plaster to dry as the carpenter can apply wood fiber board, and the painters can start immediately painting and completing the job without loss of time.

It affords clean and sanitary material for repairs, and the ease with which it can be applied eliminates the necessity of skilled labor. It is an excellent insulating material, and in buildings where attics are not finished off for living quarters, these poor wood panels can be applied on the joists or rafters, and the insulation thus provided makes a material difference in the winter coal bills.

In attics that have sufficient height for rooms, this product offers an easy and economical way for making extra rooms for sewing, billiards, and extra bedrooms, the space otherwise going to waste. It is most excellent for enclosing the laundry room in the basement or cell, the basement, preventing the cold air from coming in from penetrating to the rooms above and entering the rugs and carpets. It makes an ideal material for partitioning off a portion of the basement to be used as a cold cellar for vegetables and fruit.

It is truly a utility material, and it is a good idea to have a few panels on hand in every house for making emergency repairs, for building shelves, and a hundred other articles around the home.

THE VALUE OF BOOKS IN THE HOUSE

Well-Filled Bookshelves Lend Dignity and Charm to Any Room.

Books may be used in a variety of ways for the creating of a home atmosphere. It is not possible for all of us to have beautiful draperies and pictures, but the intrinsic beauty of books is always within reach of most of us. Let your home be an expression of your individuality. The things that a woman adds to her home decorations are what make of it a home rather than merely a place in which to live. Necessity compels many of us to make the most of our space, and to recover other things overlooked.

What could be cozier than a good easy chair with a lamp placed at just the proper angle, and a bookshelf within reach?

Many Artistic Effects Possible With Wallboard.

SAFEGUARDING THE HOME

FIRE PROTECTION IS A VITAL NECESSITY IN EVERY HOME.

SOME VALUABLE SUGGESTIONS

The Means Should Be Provided in Your Home for the Immediate Checking of Any Fire by Any Member of Your Family.

The planning, drafting, financing and construction of the new home are the natural courses to be taken into consideration before the venture. These having been accomplished there is still one other vitally important question.

"What if this my new home—the realization of my fondest dreams—should catch fire tonight? What if it should occur while I am asleep and the crackling sound of burning timbers tell the terrible story of wreck and ruin that will have been accomplished before the fire department can arrive?"

Suppose the fire starts when you, the man of the house, are not at home, and your wife and kiddies are left at the mercy of the flames? These are all questions that must occur to every home owner. While the fire department is rushing to your assistance there are several minutes in which you can do something. In this time, perhaps, you could extinguish a small fire with your own hands, if equipped in the proper manner.

There are more burglaries in homes than there are fires, yet it would be a discouraging proposition to find a home not safeguarded with a gun of some sort to protect against the thief. People are but beginning to appreciate the necessity of installing quick-to-operate fire extinguishers in their homes. More than 15,000 lives are destroyed annually by fire, the cause of which is mostly carelessness and lack of responsibility. Each year in the United States 15,000 lives are lost and 15,000 persons seriously injured by fire. Last year almost one-half billion of property was destroyed.

To a great extent these losses in lives and property could have been prevented if suitable fire-fighting apparatus had been close at hand. Statistics show that 95 per cent of these fires occur in homes. The largest percentage of victims are women and children. It remains for those of us who are, as yet, untouched by this fire fiend to profit by the lesson that we have been taught, and to so protect our homes and our loved ones that we can go to sleep each night with a clear conscience and without dread.

Fire extinguishers can be extinguished in their incipient stage if proper means are at hand. While one extinguisher should be provided for each home, yet it is not amiss to say that one should be provided for each floor in the home. The fire then could be checked more quickly when discovered. It will not develop into a dangerous conflagration. On the other hand, in case the fire has gained a dangerous headway, the extinguisher will provide, oftentimes, a means of exit that might otherwise be entangled by the fire. Suppose the fire started and had burned your family upstairs. An extinguisher should be at hand in that case to do any good, whereas one could be placed upstairs would make possible your fighting the flames back and your getting safely out of danger.

Certainly before many years this lesson will have been drilled into us.

GROWING DAHLIAS FROM SEED

Dahlias are now running the chrysanthemum a close race for the honor of being queen of the autumn in the garden, the new varieties of dahlias showing some of the most wonderful flowers, both in size, color and texture, that horticulturists have yet produced for the garden. While some of the newer varieties are too expensive for the ordinary pocketbook, anyone may have the fun of raising new dahlias at very small expense.

Dahlias grow as readily from seed as zinnias, and bloom the first year. As the plants are hybrids, the seeds produce a great variety of color, form and markings, and some fine varieties may be secured from a packet of seed. All will be good and well worth growing.

While all will not be as fine as the better grade named varieties, some of them are likely to be first class. A packet of seed will furnish a fine collection of dahlias as a basis for experimentation and comparison of the different types.

Certainly before many years this lesson will have been drilled into us.

Some people desiring a quick show will plant quite liberally, forgetting that within a short time it will be necessary to transplant if not actually throw away much of the original planting. This is not only injurious, setting back the remainder of the planting, but it interferes with the general scheme for some time to come.

By consulting with a reliable landscape gardener you can usually get an idea of the fundamentals of the proposition and can judge as to the comparative rapidity of the growth of the plants. Color scheme also enters into the matter and must be anticipated. A good landscape gardener is able to ten, twenty or thirty years in advance to paint a picture with his planting which none but himself can see until the full maturity of his scheme. This does not mean, however, that every artist must wait for that period of time to see the result of his labors.

Character of Home Influences Planting.

This does not refer merely to the architectural design of the house, but quite as well to the occupants of your home. You must consider the individual tastes of the members of your family, the climatic conditions, the color of your lot, and the type of the house that you have built. The available cash that you have to put into planting must also be considered. Do not think of the house and grounds separately when planting. They have a definite relationship and are interdependent one upon the other. You are striving for an effect with trees, shrubs and other plants instead of paint. You have what an artist calls composition to consider. By this is meant color and line as well as main accent. There are fads in planting as well as in everything else; therefore do not be governed by passing fancy. Fundamentals will always be the same.

It is generally much safer to place comparatively low bushes and plants next to the house, reserving the higher planting for the outskirts of your lot with here and there a tree to break up the monotony and expanse of the lawn. Large trees next to the house are objectionable both for artistic and practical reasons. Limbs rubbing against the house and breaking off and falling on the roof, constitute an expense and nuisance. By properly arranging your landscape gardening an artistic effect can be produced for both summer and winter.

In planting shrubbery and flowers next to the house it is well to think of them as a medium for receding the house and the lawn together. It makes possible a blending of house and grounds.

Planting According to Plan.

One of the first considerations is to plan definitely as to what your landscape effect will be. It is possible that you will use a present tree as a keynote of your plan. Consider your back yard as well as your front yard. Do not think of home planting as only a pastime and chance affair. The grounds can be planted in a very definite way, and it is time to time as you have available funds and time, and if you follow a well thought-out plan, the final effect, as well as the steps leading up to that, will be pleasing. A hit-or-miss plan, on the other hand, is bound to result in a hit-or-miss appearance. Good taste in the selection of color is as important in arranging flowers against the house and shrubbery as in anything else. Both contrast and color harmony must be considered. A background of foliage is ideal against which to set flowers. Avoid curiously shaped flower beds, and under no circumstances cut up the lawn with numerous beds. The lawn itself is a thing of beauty and does not require to be enhanced by spotty blotches of flower beds all over its surface. Reserve the flowers, therefore, for the margins. The back yard offers possibilities equal to those of the front yard and can be a combined flower and vegetable garden and lawn.

Suggestions Regarding the Lawn.

The soil should be well nourished, especially so the top soil. In many cases the cellar dirt is deposited on top of the natural soil and it becomes necessary to add some fertile soil. If possible while the excavation is being done for your house, see to it that the top soil taken off the cellar is deposited in

THE SNAPDRAGON

LANDSCAPE GARDENING

Value of Property Greatly Enhanced by Landscape Effects.

A house is not a home until it is furnished. It might also be said that a house is not a home until the landscape gardening is well under way. The work and the expense of beautifying the grounds surrounding the house are more than repaid by the increase in valuation. This, of course, is assuming that you follow wise counsel in your planting and adhere to a well worked-out plan.

Much of the work can be done by yourself. And if you are inclined toward outdoor work there is no reason why you cannot do it all. The doing of it will give you a great amount of pride and satisfaction, especially after you commence to see the result of your labors.

The prime consideration in planting is to so choose and plant that the natural beauty of the house is accentuated in every way possible and so that each part of your landscape plan dovetails into every other part in perfect harmony. To illustrate: You must think ahead far enough so that after a period of years has elapsed you will not be forced to take out some of your plantings in order that the effect that you are striving after is not ruined. Many people make the mistake of planting quick-growing and fast-growing plants, shrubs and trees in poor conscious arrangement, only judging the final effect by the effect produced at the time of planting. Obviously this is a wrong way to proceed, for the beginning seedlings which in the beginning years are small and in relatively poor balance become large and overshadow those which originally were large. Color scheme, too, may change.

FRAMING AND HANGING OF THE PICTURES

Pictures Largely Responsible for Creating Home Atmosphere

Henry Ward Beecher expressed the value of pictures very nicely when he said: "A house without pictures is like a body without a soul."

The framing and hanging of pictures, while seeming to suggest two distinct and separate subjects, can in reality be covered under one subject-head. We shall, however, treat them as two.

The very function of walls—that of protection and isolation—makes it desirable to do something to make the walls seem less a restriction. Pictures most ideally serve this purpose. They make possible the exercise of one's imagination, taking it to spaces beyond.

The story is told of a certain highly artistic individual who became so enamored of a certain view from the site of his future home that he decided that he would perpetuate the view. Therefore, while the masons and carpenters were working on the house, they left an oblong opening which was later framed. Approaching the opening, one was invariably deluded into thinking that he was looking at a painting on the wall.

While most of us are not so fortunate in the way of natural landscapes, yet pictures serve precisely the same purpose. They furnish points of interest, giving the imagination full exercise, and keeping us from feeling the confinement of the walls.

Suggestions for the Framing of Pictures.

This is a subject regarding which much can be said and little understood. Many generalizations can be given which would only serve to confuse most of us. However, there are a few basic principles which can be set down for our guidance.

The wall and the picture must both be considered when framing. It is possible to frame a picture in perfect good taste, and yet create a feeling of discord when placed against the wall. This is owing to the fact that the frame which constitutes the division line between the picture and the wall is only in harmony with one of the elements.

The wall should always be looked upon as a background, a thing which must be reckoned with when framing.

Coming back to our subject—paintings in color should usually be framed in dull gold, the width, depth and design of the frame determined by the wall and character of the painting. For illustration: A picture strong in action and color usually requires a heavier frame made of rather quiet color and subdued action, and flat tones. Therefore a picture of great depth of perspective should be surrounded by a rather deep frame.

It is wrong to assume that only good results in framing can be attained by the use of expensive frames. Some of the world's most noted paintings now hanging in our galleries are framed in the simplest possible oak frames. A discriminating use of color and gilt makes possible a very close harmony between the frame and the picture.

Cases are numerous where, owing to the effect desired, the woodwork, walls and pictures have been considered as a very closely knitted unit. In such cases the woodwork and the frames of the pictures have been made of the same wood and finished in the same manner. The mats, if mats were used, were of the same color as the wall. One notable example comes to the writer's mind where the woodwork and picture frames, being of oak, were stained to a neutral gray, somewhat darker than the walls. Such a plan, however, is very dangerous unless one happens to be a connoisseur of art and can select paintings with a view toward such an arrangement.

Framing Black and White and Photographs.

When framing black and white pictures such as etchings and photographs, it is usually safer to frame with rather narrow molding of a neutral tint, the depth and tint depending almost entirely upon the wall color and the tone of the picture. Obviously a picture of dark tones framed rather close and hanging on a light wall would not look well if framed in a light gray. On the other hand a very light picture hanging against the same wall would not require, necessarily, a dark frame.

A contrary black and white picture, owing to its strength, will stand a somewhat wider frame than the more delicate creation. Avoid frames in all cases whether for oil paintings or for black and white pictures that attract attention to themselves because of their lack of harmony or unusual design.

When framing photographs, especially portraits of a warm brown or sepia tint, it is usually safer to use a narrow, curved, gray-gold frame, providing the wall surface is also quite warm in color.

Japanese prints, because of their delicacy of line and yet great contrast of tone and color, require quite distinctive treatment. Black is used to such a large extent in most Japanese prints that the frame must be treated as a part of the design and should be quite dark, if not actually black. Usually it is preferable to use a mat between the frame and the print. There is very little feeling of perspective in the average Japanese print; therefore, the mat and frame should be kept flat to harmonize.

Hanging of Your Pictures.

Experience has proven that the best place to hang most of our pictures is in the attic. It is mostly a question of elimination.

Overcrowding pictures on the wall is perhaps one of the worst sins that can be committed as regards interior arrangements. Bear in mind that what you are really trying to do is to establish points of interest that will relieve the monotony of your walls. While harmony of color and tone must be considered when hanging pictures, it is of hardly less importance to consider carefully the subject matter of the pictures.

By this is meant that pictures of violently different subject matter must not be hung close together.

Do not hang your pictures at regular intervals. Consider the proportions of the wall and the relation of one picture to another, and to these proportions. While it is wrong to arrange your pictures

along a rigid horizontal line, yet in the case of a landscape, especially where the horizon is quite pronounced, it is well to hang the picture so that the horizon is about on a level with the average person's eyes when he is standing up. Oil paintings are usually hung so that they can tilt forward, thus preventing the reflection on the glossy oil surface, which, if the picture is hung vertically, would prove very objectionable. In art galleries where the lighting is favorable the paintings are hung flush.

Photographs, water colors, etchings, Japanese prints, and other art productions, lighter in tone and not painted with a glossy paint should be hung flat against the wall. In such cases any one of the number of hangers on the market for flush hanging can be used.

WINDOW-DRAWING PROBLEM

A Few of the Important Things to Be Considered.

EFFECTS TO BE PRODUCED

The Window Is an Expression of Your Individuality, Artistic Sense and Your Success as a Home-Maker.

In planning window draperies, the points to be considered are these: the shape and size of the windows; the amount of light in the room; the coloring of the walls and furnishings; the kind of material best suited to each room's use and its furniture.

If the windows are tall and narrow, striped materials would make them seem higher and should not be used. They may be made to appear lower by a valance or a ruffle across the top and with bands across instead of up and down, and will appear wider if the curtain rod may be extended out onto the casing, or even a little beyond it, allowing the side hangings to be pushed beyond the glass, covering the casing.

On short windows, the rod may be placed several inches above the top of the window and about a 12-inch valance may come down to the top of the window glass. In this problem, the side hangings would be kept very narrow and hung within the window casing. If there is much light in the room, rather heavy side hangings are needed, but if the windows are small and few, where there is only a north light, thinner material can be used, but with rather gay colors or creamy yellow tones.

In order to harmonize the colors of the draperies with those of the furnishings, it is not a good plan to select the color of the draperies as the rugs and furniture are in place. In choosing a color for overdraperies, a good rule is to repeat the predominating color in the rug or of the most important piece of furniture, providing this contrasts and harmonizes with the color of the wall finish.

Curtains really form part of the background for the other furnishings of the room. They hang with it and yet carry a part their own that contributes to the general harmony. A contrast in the wallpaper is, therefore, necessary in either color or value. The contrast of value is meant, noticeable differences in two shades of the same color.

The successful window treatment depends, like all the rest of the home decoration, not upon the amount of money represented, but on the quality of intelligent thought given.

Your Windows Reflect Your Personality.

Windows are primarily intended for the purpose of admitting light and air.

This has been true of windows back as far as the time when windows were made without glass. Even in the Dark Ages we suppose they must have had to have some light and a moderate amount of air although history is not very illuminating on the subject.

Today, if left to itself, a window is quite apt to give us too much of both. And so we provide draperies for it and coddle it in a way that would have been disgusting to any self-respecting window of the Middle Ages. There is, however, a selfish motive back of our selfishness. We want to soften the glare of light which streams in during the day and we want the windows to look nice at night from the outside, so we drape them with fine sheer nets and soft, silky side drapes or colorful cretonnes.

To please our optic sense, we try to have these nets and side drapes conform in design and color to the general color scheme of the room. And thus, though we lack skill with brush or modeling tool, we may nevertheless express our artistic instincts in the adornment of our home.

It is impossible to lay out any fixed styles for draperies. The style that is good in one room would not be good in another, according to the size or use of the room.

There is a psychology in the drapery. Independent of the design of a fabric, curves suggest joy; straight lines a serious bent. If the ceiling is high, a straight valance foreshortens the height and increases the length of the side wall. If the ceiling is low, the upward angles or lines of the drapery give the appearance of greater height. Not only the size of the room but the size of the windows must be considered.

Windows plainly speak of personality. They give to passers-by a definite impression of your taste—your conception of beauty.

A Home Built By Fraser Is A Home You Will Surely Enjoy

*It represents the fulfillment of your own ideas of home building
and is therefor particularly adapted to your own tastes*

Copyright, 1922, by the Architects' Small House Service Bureau.

THE care in planning your home will determine the degree of enjoyment which you will subsequently derive from it. Needless household cares can be avoided by providing at the start. There is considerable pleasure in building a home provided your builder is interested in making your particular home, one which you can thoroughly enjoy. The real builder may be distinguished by the thought which he gives to eliminating the causes of household care and making all parts of the home attractive and at the same time unusual.

Few families build more than one home in a lifetime. It is better to build the first one satisfactory rather than experiment. The cost is so very slight to make a home the many practical features which will make it a real home.

perfect at the outset and the additional pleasure which you gain amply repays the investment.

Our office maintains a service in Building-to-Order that we pride ourselves is unequalled. It is reflected in our volume of business and our host of satisfied home owners. We are interested from the very inception of your plan in gaining the maximum enjoyment for you in your home and with that thought ever in mind our efforts are directed to creating a feeling of complete satisfaction.

Our time is at your disposal and you can call on us for any information that our years of building experience offers. The "Big Idea" in FRASER HOMES—is to have the Owner of the Home—ENTIRELY SATISFIED and the finished product—A PERFECT HOME.

During the past 20 years, we have built more homes in this community, than any other three builders combined and feel justifiably proud of having building clients who have remained with us during our entire building career.

Fraser Lumber & Mfg. Co.

HOMES BUILT TO ORDER

Appleton, Wis.

Nichols, Wis.

APPLETON POST-CRESCENT

VOL. 40, No. 294.
PUBLISHED DAILY EXCEPT SUNDAY, BY THE
POST PUBLISHING COMPANY,
APPLETON, WIS.

JOHN K. KLINE President
A. B. TURNBULL Secretary-Treasurer
H. L. DAVIS Business Manager
ENTERED AT THE POSTOFFICE AT APPLE-
TON, WIS., AS FIRST CLASS MATTER

SUBSCRIPTION RATES
THE APPLETON POST-CRESCENT is delivered
by carrier to city and suburban subscribers for
fifteen cents a week, or \$1.50 a year in advance. By
mail, one month \$1.50, three months \$4.50, six months
\$7.50, one year \$14.00 in advance.

THE POST-CRESCENT'S PROGRAM
FOR A GREATER APPLETON

A systematic plan of Park and Playground
extensions and improvements.
City Manager Form of Government for
Appleton.
Systematic Street Marking and Numbering
of residences.
Outgaming County Nurse.
Greater Representation for Appleton on
County Board.

OWN YOUR OWN HOME

In recounting the large projects in which Appleton has engaged in the last few years, most people instinctively will point to the new bridges, junior high schools, the new hospital, new business blocks, the Masonic temple and other buildings and activities of a public or semi-public nature. There will always be dispute over which of these projects is the most important to the city's development and there are arguments for most of them. Most people, however, forget the largest and most important project of all and that is the building of new homes which has gone on here for the last two or three years. More than 400 new homes, costing well over \$2,000,000 were built in 1923 and 1922, and in 1924 probably 200 more, worth a million dollars, will be erected.

Bridges, schools and hospitals are necessary for a city's development but they are second to homes in importance to a community. Nothing that Appleton has ever done had as much bearing on its future as the building of 400 homes in two years. These new homes have made for contented happy citizens; it has made them property owners, proud of their possessions, eager for the welfare and the growth of the city in which they have elected to make their permanent residence.

Every family must have a home. There are different conceptions of what constitutes home but it is the duty of every father and every husband to provide a place for those dear to him to live in comfort and in health. This desire cannot be better realized than by home ownership.

Appleton next week will observe "Own Your Home Week" to stimulate a desire for owning property. A movement toward home ownership is of great community interest and it has the indorsement of organizations which have a vital interest in Appleton's development. Every effort will be made to direct the interest and the desire of Appleton people toward owning the property in which they live. This should not be hard because of enormous advantages which home ownership entails.

The home owner is lord of his own castle; the place in which he lives is his to have and to hold. There are no landlords to beg for improvements, no fears that the rent will be raised or that the roof may be sold over one's head. Improvements one makes and work that one does increase the value of his own property. He pays interest himself on the money invested in the property in which he lives. When he rents he pays the interest to his landlord. There is no pride like pride in ownership, and especially in ownership of property.

On Monday, Tuesday and Wednesday nights of next week a splendid motion picture, "The Great Idea," will be shown at the Elite theatre. This picture portrays the joys and experiences of the home builder and offers many valuable suggestions to those who are building, who contemplate building and those who now own their homes. It is a kind of a picture that instructs as it entertains and everyone in Appleton should see it. It is one of the outstanding features of Own Your Home Week, effectively bringing home the value of home ownership.

ANNOUNCING THE PEPPER PLAN

The Don Quixotic hunt for a world court disassociated from the League of Nations goes merrily on. In this chivalrous quest the knights-errant, clad in the clanking armor of isolation, battle valiantly with windmills. Last week Senator Lodge engaged in a desperate hand-to-hand encounter with the enemies of American liberty in behalf of a fantastic child of his fertile intellect—a strictly made-in-New England world court. The master minds looked it over carefully but were skeptical upon its selling qualities, particularly in foreign markets. Comes now forward Senator Pepper of Pennsylvania with a compromise proposal midway or thereabouts between the Lodge suckling and the court already set up and healthily functioning.

Senator Pepper has the clever idea of creating an election machinery exactly the same as that now used with a different name. He would have the council and assembly members of the League fill vacancies to the court, but under the title of "council and assembly of election," respectively and severally. The difference between his plan and what is, is that the electors now act as individuals, having no connection with the League. Mr. Pepper's discovery is one that could be made only by a legal mind of such fine distinction as that proverbially credited to Pennsylvania. It will excite the admiration of Elihu Root and Charles E. Hughes. According to the League-haters, Mr. Pepper's proposal has been hailed with delight by the Republicans who realize that American adhesion to the world court is inevitable but wish to deal the League of Nations a blow in the back on the imaginary contention that it has some connection with the court.

Every day the advocates of isolation are making themselves more ridiculous in the eyes of intelligent men and in the historical treatment that will be accorded them. There is not a case that would parallel it for pure bone-headedness. It is an achievement worthy the name of Henry Cabot Lodge, whose political genius is back of the whole silly intrigue. The Permanent Court of International Justice exists by virtue of an organic act or statute of its own, having no relation whatever to the League of Nations, and is entirely separate and apart from that body. Every jurist whose name means anything in international law knows this and recognizes the fact. Statements on the subject by Mr. Root, who helped set up the court, as well as by Mr. Hughes, are conclusive. President Harding and President Coolidge accepted this view without question. To claim the over-sensitive souls of the isolationists Mr. Hughes attached reservations to American adhesion which cut us off from the League as completely as if there were "no such animal."

All of the enlightened statesmanship in the Republican party is for the court and an appropriation by congress to help defray its expenses, which is all that American adherence means. The Pecksniffian attempt to whip up a great fuss over this question is equivalent to the playful efforts of a six-year old child to beat sand and water into a cream puff. If Mr. Coolidge does not want to injure his reputation, he will hold to the course his secretary of state advocates and keep clear of the tomfoolery of Lodge and Pepper.

INTREPID PIONEERS

Through snow, gale and fog, the American airplanes which are circumnavigating the earth flew across the Pacific ocean from America to Asia, and then five hundred miles through rough weather from Paramashiru, a Japanese island lying off the coast of the famed Kamchatka, to another Japanese island, Yotorofu, due north from Tokio, and finally to Tokio.

There is daring to admire. It is of the same quality as that which has impelled so many explorers to attempt to reach the North and South Poles. So far as immediate results are concerned, it is primarily the accomplishment of a spectacular feat. Whether it will contribute anything of special value to science and aviation is doubtful. Certainly the route these men have taken can never become a practical route for commercial or pleasure travel. The flight will help to slow endurance of men as well as of human beings, and this may be of some significance in future attempts to fly the great oceans.

War clouds are hovering over Europe, Asia and Africa, and the silver lining to a war cloud has never been found.

Booze promises to be an issue in the presidential election, but they will issue more than any other issue.

Health Talks

BY WILLIAM BRADY, M. D.
Noted Physician and Author

Dr. Brady will answer all signed letters pertaining to health. Writers' names are never printed. Only inquiries of general interest are answered in this column, but all letters will be answered by mail if written in ink and stamped, self-addressed envelope is enclosed. Requests for diagnosis or treatment of individual cases cannot be considered. Address Dr. William Brady, in care of this paper.

KEEP THE VALVES CLEAN

Although it is impossible to grind the heart valves smooth again when they've become roughened or distorted and leaky as the result of a past endocarditis inflammation of the lining membrane of the heart, such damaged valves do not mean scrapping the engine. The chances are that you'll wear smooth again in the course of a few years—yes, they certainly do, though I would not have admitted this until I saw it happen. But even though one subject to valvular leakage cannot expect such extraordinary good fortune, the heart is a wonderful engine and as a general rule it has enough reserve power to compensate an ordinary leakage and maintain a fairly efficient circulation, provided the owner treats his heart right.

At each contraction or beat the heart pumps something like three ounces of blood. Suppose the mitral valve is damaged and leaky—this is the valve between the left auricle and left ventricle, and that is the one most frequently affected—and that a backward leakage of a third of an ounce of blood occurs with each beat. That leaves the general circulation shy a little over ten per centum of its regular quota of blood, and a little deficiency like that is scarcely perceptible until some extraordinary strain falls on the heart, say an attack of pneumonia or appendicitis or the onset of chronic business prosperity. The reserve power of the heart can readily absorb a moderate leakage, but of course such waste of power leaves the heart in poor condition to cope with a heavy strain of any kind.

Any valvular leakage, under intelligent management, will be automatically compensated by an increased muscular development of the heart, so that each beat pumps something more than the normal three ounces of blood, enough more to make up for that which leaks back through the damaged valve. This is accomplished at the expense of the reserve power, however. There is a certain limit to the power of any heart; let us say the ordinary function of the heart uses power from A to E in quantity; then it has power from E to K which it can fall back on in an emergency. From E to K is the reserve power. With a compensated valve leakage, the ordinary heart function draws on the power from A to G, leaving a smaller reserve power H to K to depend on in emergencies. If it is possible to increase the reserve power of the heart by training, just as an athlete increases the general reserve power of his muscles (including the heart muscle itself) by training. This is the aim and object of medical treatment in valvular disease, and by medical treatment I mean not only the use of medicines but the use of rest, graduated exercise, hydrotherapy and other remedial agents. The test of the most dangerous kind of ignorance in respect to heart disease is the pure assumption that the "ordinary doctor" can do nothing more than prescribe medicines for such cases, and that one must consult some kind of specialist or some new-fangled style of healer in order to get treatment other than drugs.

And that reminds me, I've quite forgotten to mention murmurs. Next time we must listen to some murmurs.

QUESTIONS AND ANSWERS

Symptoms

I would like to inquire if it indicates a serious kidney trouble when the urine leaves an iron rust stain. (S. M.)

Answer.—I never send bad news, so don't ask me whether anything is "serious" or "dangerous" or something to worry about. But I can assure you such stain has no significance. I am a great believer in the old saying: No news is better than bad news. Maybe this accounts for a great deal of silence.

Tuberculous Cattle

Any danger in using for food the meat of an animal which had tuberculosis? (B. D. E.)
Answer.—Not if the meat is well cooked. Much of the beef marketed is from tuberculous animals. (Copyright, John F. Dille Co.)

LOOKING BACKWARD

TWENTY-FIVE YEARS AGO

Saturday, May 27, 1899.

Major N. E. Morgan was at Marinette on business.

Mrs. C. S. Dickinson left for Ooshkosh, where she was to be the guest of relatives for a month.

Miss Georgia Hall was expected home the following week from New York, where she had been studying music the previous year.

Arnold Pecksniff was erecting a new barn on his property on High street.

Capt. George P. McGillan came near losing a finger by being bitten by one of the horses of the No. 1 engine house.

Members of the Appleton Gun club who took part in the shoot Friday were Edward Shields, Robert McClure, D. H. Pierce, W. L. Conkey, P. M. Conkey, Dr. Trask, Edward Stannard, James McCabe, Alfred Galpin, William Groth and F. J. Diebling.

The Kaukauna Times said John Stevens was about to tear down the old brick block at the corner of Second and Main and replace it with a modern pressed brick structure.

Deputy Sheriff and Mrs. Louis Wurl returned from Dodge-co, where they attended the wedding of a relative.

The season of German theatre was to open the following evening and was to continue for four Sunday evenings.

Charles Schumann of Neenah purchased a driving horse from D. Hammett & Co.

TEN YEARS AGO

Saturday, May 23, 1914.

Congressman Koenig was to be one of the speakers at the annual convention of Wisconsin Rural Letter Carriers association at Green Bay, May 29 and 30.

A special train was to be chartered to take the Appleton delegation to the biennial convention of German Catholic societies at Sheboygan May 21 and June 1.

The season at Ridge Point was formally opened with a dance the previous evening.

Endeavoring to hold himself from falling by placing his hands on top of a stove where his mother was preparing dinner, Harold, one-year-old son of Mr. and Mrs. Arthur Schreiner, Story-st was painfully burned Friday noon.

The Rev. Henry Fattile of Lake Mills was to occupy the pulpit of the Congregational church the following evening.

O. F. Schaller returned from Indianapolis, Ind., where he attended the annual convention of the National Retail Hardware Dealers association.

The recent census of the postoffice department showed there were fewer vacant houses than at any time during the previous six years.

The work of improving the hill on Green Bay was progressing favorably.

Arnold Pecksniff company filed articles of incorporation with Register of Deeds A. G. Koch. The capital stock was \$25,000.

DID IT EVER OCCUR TO YOU?

Have you ever walked in the hotel lobby. And caught the glance Of the prettiest girl there And have her smile A wonderful smile And walk toward you With hands outstretched And go right past you And kiss the fellow Just behind you? Such things as these Lead men to drink.

It is a pleasure to note that songs are turning away from the banana series. But now the composers are turning to another field and capitalizing the weather.

L. I. Z. suggests that the popular song, "Don't Mind the Rain" be made the state anthem for Wisconsin.

Well, we will say that "Don't Mind the Rain" has better possibilities than "It Hain't Gonna Rain No Mo."

What has happened to all those silver linings of the clouds that we used to hear so much about during the war?

WEATHER GRUMBLERS OUGHT TO THINK BACK ABOUT 15 YEARS TO THE DAY WHEN WE WORE OVERCOATS ON THE FOURTH OF JULY.

New Bobbed Hair Styles
Carpenter's bob—Shingle.
Clothing's bob—Buster Brown.
Railroad bob—With switches.
Ocean bob—With swirls.

How can marriage bonds be safe with divorce coupons attached, asks a married woman of Appleton.

After viewing the new styles of bathing suits in the newspapers, the sheikhs are wishing the bathing beaches would open pretty soon.

AN APPLETON MAN HAS INVENTED A DEVICE FOR CONSUMING BEVERAGES. WE THOUGHT THAT WAS MADE IN THE GARDEN OF EDEN LONG AGO.

A novice among motorists wondered why they call Ooshkosh the Snail City—until he tried to speed through it the other day.

A street corner lizard was watching two college girls walking in the rain, their bobbed hair covered with newspapers.

"Gosh!" he muttered, "the shingles don't seem to help much in a rain."

A reader wants to know who presented "The Dust of the Earth" play in Badger school the other night. We are interested most in who "raised" it.

ROLLO.

Saturday Sermon

(The following sermon entitled "The Heroism of a Private Life" was prepared for the Post-Crescent by the Rev. D. P. French.)

There is in most men the element of heroism. And all instances of this sort have for us a singular fascination. For example: The story of the great Napoleon, walking through his camp one night, when the coming day would usher in a mighty battle finds a wearied sentinel asleep at his post; the Emperor takes the soldier's musket, paces his beat until the sentinel awakens and restores the musket to him with no word save of pity for his weariness.

Some years ago the newspapers reported the death of Burton E. Baker, a world famed authority on the use of the X-ray. He had been a man of vigorous body and he had labored to make the treatment of some value for the physical ills of others. His experiments brought to him a cancerous affection, which spread until there was scarcely a sound spot on his entire body. He actually watched himself die, writing the history of his case, that science in its future dealings with cancer might benefit by his sufferings.

Such incidents as the above are full of inspiration, but there are many cases of heroism about which we hear nothing—unknown heroes who do not receive the praise of men, but who surely will have the favor of God. The one great need of this day is for men who will be heroic in all walks of life. Men in business who will say NO to any suggestion of double dealing, men in political life who will be actuated by principle, rather than by policy, men in the church who will stand openly for the truth. There is in most of us a capacity for sacrifice. The best heroism may not be on the battlefield, where it is easy to be brave due to the surroundings, but in private life, when no one is looking on, and when no one seems to care; when victory brings no applause; when there is no vision to inspire; when only the ordinary routine of life confronts us.

A HERO FOR PRINCIPLE
There is one story in the Bible that always appeals to us, for the reason that it has in it this element of the heroic. John the Baptist was in the prison cell in the castle of Macherus, because he dared to tell the king that he was living illegitimately with another man's wife. John lost his head because of his fidelity to the truth. That was courage and heroism of the highest type.

And then think of Jesus Himself. All that He had to do to avoid the cross, was to take back some of the things that He had said, but to His everlasting credit, He takes nothing back, but marches to the place of death, with such consecrated courage and heroism that the world has been marvelling ever since. During the Spanish-American war, Richmond P. Hobson gained considerable honor and glory through his feat of sinking the Merrimac in the Bay of Santiago, for the purpose of holding Cervera and his fleet in the harbor. In the face of a terrible fire of shot and shell from Spanish guns, the Merrimac ran into the narrow channel, where it was swung across and anchored. Then Lieutenant Hobson blew holes in the bottom of the ship, and with his seven men took to the boat. They first made an effort to row out of the harbor and regain the American fleet, but soon realized that that meant certain death to all.

All winter your head has felt a Felt-- Now for the STRAWS!

Almost like going barefooted to put on your head a new Schmidt Straw Hat and leave your old felt here to be sent home in a bag.

Only four months to wear Straw Hats too! That's why you shouldn't waste a second.

From the look of the size of this stock you'd think straws could be worn all Winter—that's because we have the showing of Appleton Straw Hats every year—and do the Straw Hat business of the city every day.

At \$2 at \$3 at \$4

At a store where no man ever went ahead into the wrong hat!

Foulard Ties—light pastel shades—Bows too, to wear with your collar attached Shirts.

MATT SCHMIDT & SON

"TWO FLOORS OF GOOD THINGS TO WEAR"

Unusual People

ANCESTORS IN EVERY WAR

JAMES LOUIS PETTIT

James Louis Pettit of Burlington N. H., is the youngest member of the Society of American Wars. He has had an ancestor in every American war and was a member of a delegation from the society which presented President Coolidge with its insignia recently.

He came through the water, despite the tide that was set against him. It was a hard task and he was tired and weary, but just when his desperation was greatest, he heard the voice of his little boy hailing him from the beach and looking through the gloom he could discern a faint glow on the shore, while the land called encouragingly, "Papa, I'll cheer you with this lantern." Great is the power of loving sympathy. It illuminates all shadows and lightens all tasks. Perhaps it is impossible for most of us to be gleaming searchlights in the world, but at least we can be lantern bearers to cheer some one in the voyage of life, and there is enough of this business that ought to be done. It takes courage to do that but the fellow that is willing is a hero in every-day life.

This is a plea for contentment in the humbler spheres of life. To remember the story of Aaron and Hur upholding the hands of Moses on the top of a hill in Rephidim, while the Israelites and the Amalekites fought below. The trouble is we all want to be leaders, we want to be the Moses. We want to lead the march through the Red Seas, we want to ascend Sinai alone, we want to feel that destiny depends upon our hands, but it is just as necessary sometimes to be contented in the sphere where we can count for the most. That is the heroism of a private life, just fighting the battle of life manfully, sure that the crown of the king will most certainly be ours.

Just A Moment

Monaco was an independent principality for 800 years until the reigning prince was dispossessed by the French Revolution.

Turkeys are so named because when they were first imported into England, it was generally believed that they were from Turkey.

According to old English records, King Edward III bought his race horses for slightly over six pounds apiece.

Atomic weight is the weight of an atom of a chemical element as compared with that of an atom of hydrogen.

Drawings in color believed to be more than 22,000 years old have been found in a cave in Spain. Wild animals, bulls, lions, deer and horses, are portrayed.

One northern hardwood tree of any variety, 21 inches in diameter five feet above the ground, will yield a cord of wood.

Chinese wives must serve their parents-in-law as they would their own father and mother, even to the extent of assisting them in their toilet.

PREVENTING DECAY OF PORCH COLUMNS

Capillary Action Draws Water Under Post and Causes It to Rot

One sometimes fails to understand the cause of premature falling of porch posts and columns. When a house is built, it is supposed that the posts which support the roof of the porch will stand rigid as long as any member of the structure. Then, when they begin to loosen at the base and a rot becomes noticeable, the cause is often laid to the lumber itself.

As a rule, decay of porch posts at the base is due to rot incurred by water drawn into the joint at the bottom of capillary action. This happens every time it rains and when the floor is flushed off. If the bottom of the column is allowed to rest on a square of sheet iron, so that there is no contact between the floor and the column, this trouble will be reduced because there is no contact between the post and the floor.

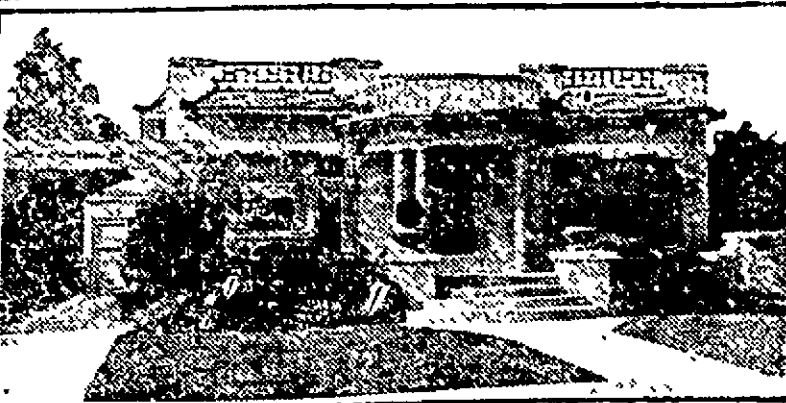

A still better way is to coat the bottom of the post with tar or a bituminous solution. When painted this will not show. If the porch floor is of concrete, a good plan will be to raise the portion or portions of the floor upon which the posts are to rest, about one-half inch, and neatly work down the collar so that its appearance does not detract. When this is still wet, a bolt without a head is set on the concrete and later a hole bored in the bottom of the post to fit over the bolt. This produces a slight rise which will quickly run the water off.

CUSTOM BLAME FOR BUILDING IDLENESS

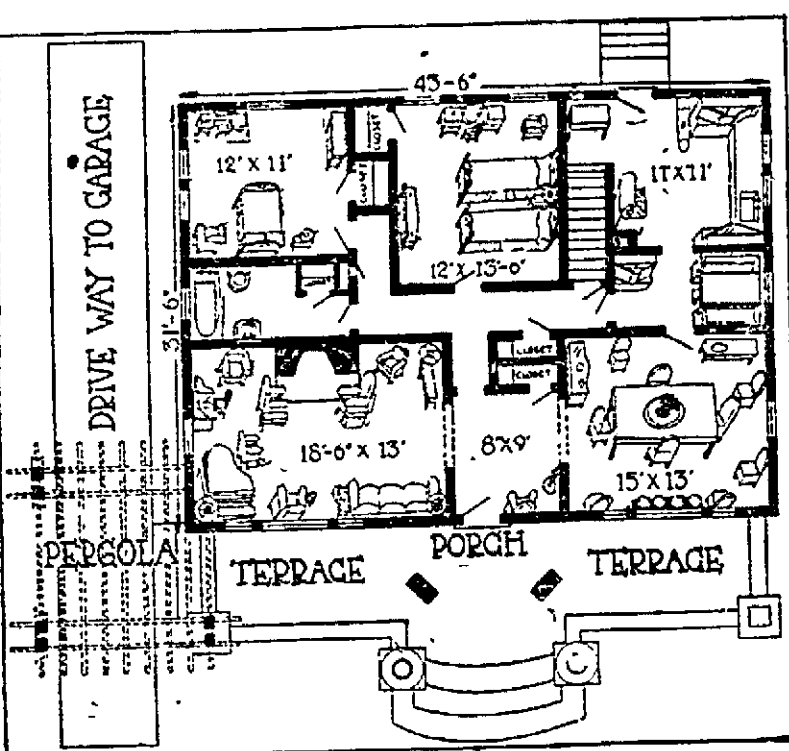

Custom, not climate, is largely responsible for idleness in the construction industry at certain periods of the year. Secretary of Commerce Hoover's committee on seasonal operations reported in March following several months' study of the situation.

Cities in the south and on the Pacific coast show much the same seasonal idleness as those on the Canadian border, the committee stated. Such ups and downs are preventable for the most part, was the opinion of the committeemen. Modern methods of winter construction compare favorably with summer work both as to cost and progress of work and recent months are said to have shown great activity. Increasing winter construction to a material extent depends largely upon public education which is making good progress, according to the committee.

California Bungalow Is Good for Other Localities

© AMERICAN BUILDER MAG.

CALIFORNIA BUNGALOW AND PLANS

California is the home of the bungalow.

Other parts of the country quickly adopted its attractive structure, building the bungalow more substantially because of the colder weather. But the pretty exteriors and compact room arrangements are retained.

An exceptionally attractive type is shown here. This is a five-room bungalow home, but it has the appearance of a much larger house because of the roof decorations, the terrace that extends the width of the building and the covered entrance porch. The pergola at the side over the drive to the garage, which follows the same architectural lines as the home, is an attractive feature.

The entrance door leads into a good-sized reception hall, on either side of which are the living and dining rooms, both connected by double-cased openings, which give opportunity to throw the two rooms and hall together. Both rooms are light and cheery, having large windows at the side and front, the latter being flanked with long windows reaching to the floor.

An entrance door at the rear of the reception hall leads to a hall that connects the two bedrooms. The bathroom is readily accessible to all parts of the house, being at the end of the hall.

There are many closets, a feature the housekeeper will like. The basement extends under the whole house providing space for the heating plant, fuel, storage, etc.

The stucco may be applied to wood or metal lath over wood frame, or to brick, tile or concrete. Built in frame with wood or metal lath as a base for the stucco, this home will cost about \$5,500, although building costs vary in different localities.

USE OF COLUMNS ADDS TO CHARM

Much of the charm of old colonial houses in the United States and of the plantation mansions of the old south was inherent in the use of the architectural column, an element popular wherever men build beauty as well as sound construction into the structures they erect.

For thousands of years, from far off antiquity, architects and builders have found nothing so utilitarian and beautiful as the column. Most all of the famed buildings of the ages owe much of their character and beauty to the use of columns as important exterior and interior structural details.

A column fulfills its purpose when it really supports the structural weight above it. It should never be a false ornamental detail, forcing the structural support to be gained elsewhere. Steel is a material which lends itself particularly well to column construction and is capable of yielding the necessary sharpness of line.

As a general rule it will be found that Roman or Greek Doric goes well with the simpler design of building. Roman Corinthian, Greek Ionic and the more florid variations due to Renaissance influence fit in logically with the more pretentious type of building, interiorly and exteriorly.

PROCEED SLOWLY WHEN YOU ACQUIRE A HOME

In deciding whether to build or buy a house Dr. John M. Gies, director of the department of commerce, division of building and housing, advises as follows:

"The prospective home owner may either buy a finished house or buy a lot and have the house built for himself. The man who is unable to make the cash payment required on a house may be able to make payments on a lot. A man may find a house of which he highly approves or one which he can easily change to suit his needs. If the price is right it may be desirable to buy. His judgment as to materials and construction may be untrained and the house which he would build might not be as good as the one he could buy.

"A completed house may often be bought for less than one could build it for, due to the extra expense of building one house as compared to the cost of building a dozen or a score of houses at the same time, which frequently is done by large companies. Every prospective home owner must decide which to do—buy or build—and he should investigate both plans thoroughly before he decides."

Care In Building Will Save Many Dollars Now Spent To Pay For Coal

One of the biggest helps good architectural service gives a home builder is freedom from "draughty" rooms: rooms where one sits on a chilly Sunday morning with one's feet next to the sizzling radiator, while the "draught" seems to rustle the morning news in one's hands and send unpleasant shivers up and down one's spine.

Most everyone can remember at least one house of this type. They are still built; hundreds of them every year. The ornate "gingerbread" effects in millwork are no longer used. The big chilly hallways have gone; but the "draughts" remain. Houses poorly designed and poorly built are just as uncomfortable and burn just as much coal today as did their counterparts of 20 years ago. They are still the wastrels of America and they cost us hundreds of carloads of coal as well as many morning of discomfort every year.

The most common causes of draught and cold houses are uninsulated walls, no caulking around window frames, lack of "beam fills" at foundation line, incorrectly placed radiators and uninsulated roofs. Let us analyze the first of these two items: Insulation of walls and roof means

placing some heavy insulation between or on the studding on all outside walls and across the ceiling joists. This insulation contains thousands of tiny air cells which make a barrier to the passage of heat or cold through walls and roof.

SETS UP DRAUGHT

The cold which travels through unprotected walls chills the air next to the wall. Cold air settles and heated air rises, setting up a circulation of draught with the air near the radiator rising rapidly and traveling along the ceiling up the staircase and on out through the room and the old air traveling down the outside walls and along the floors. Insulation prevents this circulation by confining the air cells in tiny particles within the texture of the material itself.

Insulation should be covered in the specifications. For the outside walls and ceiling it should be tough and durable so that it will stay put as long as the house stands. Some manufacturers guarantee this for their material.

Each job should be carefully inspected after the insulation is applied. Make sure every sheet runs the whole

distance from the bottom sill to the top plate. See that the places over and between the windows and doors are as carefully lined as the larger spaces. Make sure that the top story ceiling or the roof is lined in the same way, and by a material just as sound as that used for the side walls. This part of the house is going to be completely covered by plaster and it is essential that insulating material be properly applied.

REQUIRES EXPERT ATTENTION

The other items of caulking around window frames, filling in with masonry between the joists where they rest on the wall, and placing the radiators where they should be, must be followed through with proper care as to details to assure a house that will be easy to get warm and which will stay warm. Like every other thing of this kind about small house construction, there are problems of materials and workmanship that must be in the hands of experts.

In these days when fuel costs are high, it is worth while to give study and attention to anything that will assist in lowering heating expense. A well insulated house not only keeps down fuel costs, but it keeps out draughts. The causes of most cold houses is due to faulty insulation, or no insulation. It will pay therefore, to study the matter of insulation, how, when and where to use it.

FOUR THINGS TO LOOK OUT FOR Besides wall insulation, there are a number of construction practices that make for a good, snug draughtless home. Check them up, and see that

the home building job is not neglected in any one of them. First, the "beam fill." This simply means that the space between the floor joists at the foundation line is filled with concrete. It cuts off the actual leakage of air at this point and stops, to some extent, cold floors and draughts.

Second, caulking around window frames and door jambs. See that all jambs and frames are stuffed carefully. Some pieces of insulation or caulk make a very satisfactory packing. This takes little time, yet it saves many a chilly evening when the winds are seeking out every crack and crevice to enter your house.

Third, correct placing of registers or radiators. If a house is well built, and a good, efficient insulation lines the outside walls, there need never be such a thing as a "cold room," an "unheatable hall," or a similar bugaboo. With this protection in outside walls any good engineer or heating contractor can so place and proportion his radiation that no one room will be colder or warmer than the rest of the house.

Fourth, insulation for the roof. This is, perhaps, the biggest single item in insuring the comfort and economy of a home. Heat rises and seeks to escape at the top story ceiling. If no insulation stops it, this heat is lost. Furthermore, a circulation is set up with the heat rising from the lower floor and the cold falling along the walls to the lower level. This causes draughts, cold floors and uneven heat. It wastes fuel and makes it necessary to force the furnace.

Do not get the idea that in order

to conserve heat in the house it is necessary only to build the walls soundly. The windows and doors lose much more heat than the walls. Everybody has noticed how, in cold weather, the wind blows in around the edges of the windows. As the building ages the windows become more loose. Cooling of the air in rooms from this cause can be avoided by putting on approved weather stripping or well fitted storm sash. The efficiency of both storm sash and weather stripping has been clearly shown. The effect to save loss of heat across the window glass. Everybody knows that in very severe weather pulling down the shades will help to keep the rooms liveable and that is the way storm sash acts.

Build well, insulate the walls—in any case at least the upper story; fit the windows with storm sash or weather stripping; and the profits will be found in reduced coal bills.

RED GUM WOOD BECOMES POPULAR AS A FINISH

Red gum wood is popular as a finishing wood in hospitals, because it is entirely odorless, and the grain is very close, making the wood aseptic. A minimum of resinous substance in the wood likewise makes it particularly well adapted to take paint. There is never any danger of the rosin or sap coming through to spoil the decorated surface when finished.

COMBINED PERIODS GAINING IN VOGUE

Matched Furniture Now Is Often Preferred to Suites

Combinational groupings of furniture for the living room are becoming more and more in vogue. This is especially true in the more pretentious and modern homes.

Suites for the living room appear to have run their cycle. When the world war clouds gathered and broke, many furniture factories were making mostly English types and continued doing so during the European strife on account of war time restrictions. Immediately following the overseas strife these types were continued to be made on account of the boom in trade. Then came the slump and with it the urgent necessity for radical revisions not only to stimulate trade but to cover changes in price.

The shift was to the Italian and Spanish types of design, which, for two years, have seemed to predominate. Improved business conditions appear to now demand another radical revision and the tendency of the furniture designers is back to the English and a revival of the colonial,

which for several years has not been in high popular favor.

While strictly period designs are being shown, combinations are beginning to predominate, with walnut and mahogany the favorite woods.

PERIODS NOW COMBINED

Furniture of various period designs, when combined in harmonious groupings, creates a delightful, homey environment. In contrast to the popular idea that only suites bring pleasing arrangement and decorative effect, a living room furnished with such period combinations offers a new atmosphere and delightful distinction.

In such groupings of walnut and mahogany furniture the pieces seem to have a greater individuality and they may be arranged with a view to getting the utmost in comfort and beauty.

The writer recently saw a room arranged and furnished after this manner. In it were to be counted five individual groupings, with as many different designs or periods represented. The scene was delightfully different on account of its individuality, yet, as a whole, restful, attractive and offering a hospitable welcome. It appeared natural, as though the pieces had grouped themselves to create the satisfying atmosphere and environment.

AN ATTRACTIVE GROUPING

The first grouping was about the fireplace which was beautiful by a Renaissance mirror with floral panel and gold carved frame, the latter repeating the scroll motif of the mantel. Besides the fireplace two Jaco-

bean chairs, with cane backs and seats, gave further distinction to the setting.

Forming the second grouping in the middle of the room and facing the fireplace, in which the interest naturally centered, was a davenport, the feet of which showed a Queen Anne motif, supported by an Italian Renaissance table. Before this stood a cane bottomed stool. The davenport and tables also reflected the Renaissance design.

As one entered the room, in the left foreground was an occasional setting, an easy chair, an octagonal table of modern adaptation enhanced by brocade scarf and vase.

To the left of this grouping was another, in strong but pleasing contrast, which had been arranged at the side of the broad windows. It contained a cabinet secretary made in walnut which is so desirable for present day living rooms because it can be closed to conceal the contents when not in use.

PASSING OF OPERA GLASSES

Although jewelers still show them, and manufacturers still make them, opera glasses as the pride and property of every young woman, are passing out. Opera glasses may still be rented in the theater lobby, and of course they are still given as gifts, but the custom once so popular in the days of Ada Rehan, Denman Thompson and Clara Morris seems to have died out.

Right Furniture for Harmony in Your New Home

Selected in the proper colors this suite will bring charm to

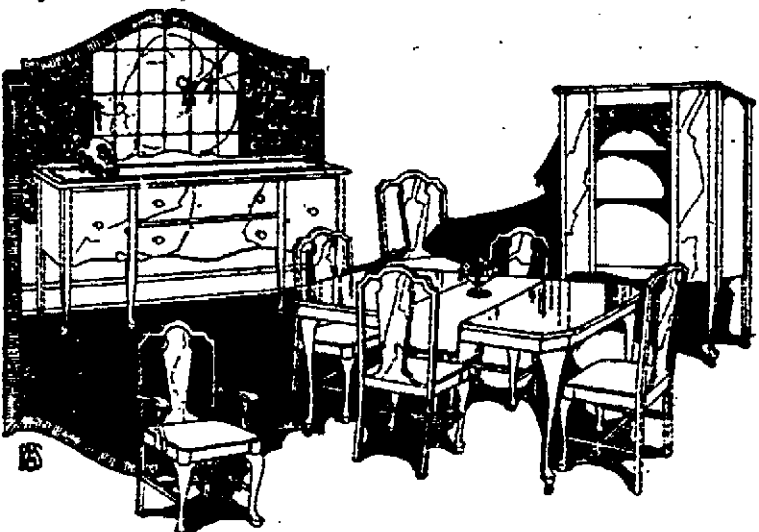

The New Living Room

The soft, silky mohair in rich colors, each having a harmonious color peeking through the nap. The wood parts are in solid walnut, effectively carved. The 2-piece suite is attractively priced.

Queen Anne Period Affords Pleasing Effect for

The New Dining Room

The grace of the curves and the daintiness of the size, in combination with the splendidly finished walnut, produces a dining room of exceptional grandeur. Each of the pieces match and any number may be purchased to completely furnish your room.

FURNITURE for New Homes

TODAY'S modern furniture is beautiful—much more so than furniture that has ever been displayed before. The old periods, beautiful as they were—have been improved—better finishes have been put on—more perfect designs and proportions used. With the new furniture of today, every home furnished—fit for a king.

The Furnishing of the Guest Room

IN YOUR new home will the guest room be outfitted to bring pleasant memories to your guest? This is one of the prides of every hostess. A guest room, bright and comfortable, may be effected with this Louis XVI suite.

BUILD WITH BRICK

Home Builders Of Today Are Finding Anew The Charm And Economy of Face Brick Construction

Mounting timber costs and the desire for a structure of permanence and economy, have resulted in a great nation wide demand for brick construction. The six outstanding reasons for its desirability are:

Upkeep Cost—

Brick requires no painting. Its color is permanent and lasting.

Low Depreciation—

Brick shows no wear. It is practically immune to the ravages of time or the elements.

Warm in Winter—

A brick home requires less fuel for heating. Its porous construction withstands cold.

Cool in Summer—

Your brick home is cool in summer. Its walls are naturally insulated against weather.

Low Fire Risk—

Brick walls withstand fire. Your brick home takes a low insurance rate.

Better Appearance—

A brick home always keeps its fine, clean lines and its charm increases with age.

Comparative Costs for Five Types of Construction

From Average of 19 Estimates for a 7-Room House in 13 Leading Cities

	100% Cost of Frame
FRAME	2-10% More Than Frame
STUCCO	4-7-10% More Than Frame
BRICK VENEER	6-2-10% More Than Frame
BRICK ON HOLLOW TILE	6% More Than Frame
8-INCH SOLID BRICK	

6% — Only \$420 to Turn a \$7000 Frame House Into a Solid Brick House

A.F.B.A.—Use Face Brick—It Pays

The Brick House Will SAVE This \$420 Every 3 Years in Lower Painting, Insurance, Heating and Upkeep Costs and in Low Depreciation

Flexibility in design and color scheme, has been met with innumerable new faces and shades, that lend themselves fully to natural surroundings. Brick homes will have their dignity and beauty intact after depreciation has defaced and destroyed other types of construction.

Face Brick In All Designs, Textures And Shades May Be Seen In Various Structural Combinations At Our Display Rooms

THE HOME OF BRICK

Unusually Beautiful Effects, as Well as Great Durability
Are Peculiar to This Building Material

Slight Additional Expense Offset by Greater Permanency and
Lower Insurance Rates.

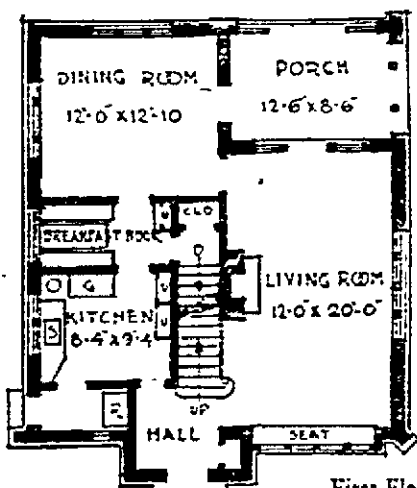

By LEWIS GRILK

In building a home there are three chief considerations of equal importance:
First—UTILITY, or such arrangement of the interior parts as meet the needs of the family occupying it.
Second—STRENGTH, or such durability as justifies the expense involved.

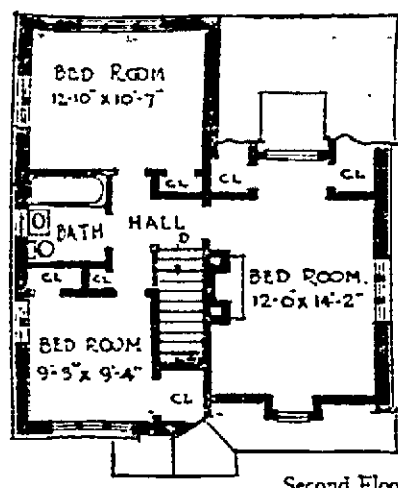

ance rates.
4—Comfort with resulting advantages to health.
Each of these items could be subdivided and taken up more in detail. We shall try to touch briefly on a few of these divisions.
It is as well to bear in mind that two sets of costs enter into the owning of a home:

stead of expense. No expenditure is so important as that which you make for a home. You are to live in it for a period of years. You will see it every day and every day your neighbors will see it. It should be as well built as your pocket-book will permit. Strength and durability should be prime considerations, and in addition it

An Attractive Bit of Architecture

First Floor

Second Floor

Third—BEAUTY, or such attractiveness as delights the eye and satisfies the artistic requirements of harmony of color and form.

UTILITY depends entirely on skill and genius in laying plans, and STRENGTH and BEAUTY depend largely on the nature of materials chosen.

The point which must be settled first in each prospective home-builder's mind is the amount of money that he can invest in a home. After determining this, the materials that shall be used is the next point to settle on. Unless one is absolutely forced by financial circumstances or artistic taste to choose a building material which is not the most permanent, then it is wiser to consider the slight additional cost of a home of more permanent construction as an investment and not an expense.

Face brick has several advantages which appeal to many people. The slight additional cost of the brick home over the frame is easily offset in the course of five years because of various factors which will endeavor to cover. In strength and durability, brick is perhaps surpassed by no other material. Its varied beauty and charm of appearance presents desirable possibilities. It is far less expensive than such materials as stone, granite and marble, and has more durability. All things considered, on the other hand, it is only slightly more expensive than such materials as wood or stucco. Many people would like to use face brick in building their new homes, but have been regarding it as too expensive. This is usually a grave mistake, based, no doubt, on comparisons of 40 or 50 years ago.

As a matter of fact, the face brick house with common brick or hollow tile backing does cost more than the frame structure of wood or stucco on frame, but it costs only a little more, and from many angles, as already cited, it appears to be worth more. Besides its structural durability and artistic merit, it has economic advantages that in the long run may save you money, and in the end actually reduce cost of the house below that of other structures of like dimensions. The items that enter into this reduction are:

- 1—Maintenance or upkeep.
- 2—Depreciation.

1—Initial cost of the building.
2—Depreciation and upkeep.
Based upon figures gathered in various parts of the country it has been found that on an average it costs 6 per cent more to build a house with solid brick walls than to build a frame house. Appraisal engineers figure that a frame house depreciates from 2 to 3 per cent annually from the day it is built, while a brick house shows no depreciation for the first five years, and after that at the rate of only 1 per cent per year.

Based on these figures you will find that maintenance and depreciation costs alone on the frame construction will in a very few years entirely wipe out the excess initial cost of the brick, to say nothing of all the other items that go to make your face brick home all the time an investment of a permanent and remunerative value.

While it is by no means the purpose to discourage anyone from building a frame home if they feel that from the standpoint of art the frame home answers their needs, yet when speaking from the standpoint of permanency, the brick house comes most nearly to ideally answering the demand for a universal building material.

Being not as expensive as stone nor as cheap as wood construction, it stands halfway between the two in initial expense and has, so it seems, special advantages not possessed by either.
For example—a \$7,000 frame house would mean, figuring depreciation at 5 per cent, a total of \$7,420 for a face brick house. Depreciation at 2 per cent annually on the frame house in five years would be \$700. Add to this a repainting bill of \$250, and you have a total of \$8,370. For the five years under consideration there would be no depreciation to be calculated on the brick house except a repainting bill of about \$85 for doors, windows and outside trim. This means that the difference of \$865 between frame and brick upkeep and depreciation covers in five years more than twice the \$420 excess initial cost of the brick. Even if the initial cost of brick construction was 10 per cent higher than that of the frame house you would save money in the long run.

As stated in the first part of this article, you would look on the

must have style to satisfy the eye. The quality you want for safety and convenience for yourself and family, style you want to satisfy your own and their taste. It is well to bear such thoughts in mind when selecting the building material for your home and to bear in mind, moreover, that the impression your home creates on your neighbors reflects either credit or discredit on yourself and in a manner identifies and places you in the mental estimate of your neighbors.

Lower Insurance Rate.
Brick is durable, does not change in color, texture or strength. It is capable of many interesting and varied effects. It is proof against the action of the seasons and the ravages of fire, thus reducing the cost of maintenance and making for lower insurance rates.

It may be that you frankly prefer painted wood or stucco or the varied stone or marble. If a rich house costs you from a twentieth to a tenth more, all things considered, than a less substantial construction, but it lasts more than twice as long and remains in a better condition.

Styles of Laying.
Besides the durability of brick not only is there the pleasing proportions to the eye, but it immediately lends itself to the skill of the mason craftsman and offers the utmost possibilities in designing the styles of brick, each one having peculiar merits of its own. There are also several textures and colors of brick from which one may make a choice. A combination of taste with a good style of laying offers one unlimited variety.

BUYING A KITCHEN RANGE

The Stove Considered by Many the Most Important Item of Furniture in the Home.

It has been said that if one were to discard piece by piece all of the furniture in one's home, the stove would be the last piece of furniture which could be dispensed with. One can sit on the floor, sleep on the floor and eat on the floor, but one cannot cook on the floor.

Too little thought is usually given to the purchase of the kitchen range. If it be a coal range there are several

relative to the kind of coal and the amount that will be consumed. It is really the chimney and not the stove that causes the burning of fuel. However, it is the construction used in the stove that determines to a very large degree the amount of fuel that is used, and the efficiency that is obtained from its burning.

If you are burning soft coal you have a problem of consuming the soft coal gases before they escape up the chimney. A cheaply constructed stove will not do this, and you are therefore wasting one-third to one-half of your fuel in escaping gases. There are several ranges on the market with so-called smoke-burning drafts, but according to one of the Bureau of Mines' recent bulletins, it would seem that to properly consume the fuel gases, it is necessary to have an auxiliary draft from above. However, it is not enough that the stove has such a draft. The construction of the stove must be airtight, otherwise the action of the top draft will not be efficient. A smoke and gas burning draft which is effective will enable the owner of the stove to utilize much cheaper fuel than would otherwise be possible, with practically the same results peculiar to hard coal.

The Oven.
Whether you are buying a coal or gas range you must consider carefully the oven. There are several things that the oven must accomplish. In the first place it must bake evenly on top, bottom and sides. In the second place it must retain heat well enough that the baking will be gradual and can be regulated. A poorly insulated oven of light construction is likely to be flashy—hot and cold. If the fire dies down temporarily the oven immediately drops in temperature and the baking may be spoiled. If, on the other hand, the temperature of the fire is suddenly raised the baking may be burned. An oven of easy construction and of good insulating properties tends to equalize the temperature and prevent rapid fluctuation.

Oven Thermometers.
Oven thermometers are not intended to give the temperature in degrees of temperature, but merely to furnish a comparative reading. No two oven thermometers are exactly alike, therefore you should learn to judge the temperature of your oven for your individual needs. After you have a few bakings you will note the reading of the thermometer at which you get the best results for given kind of baking. After that is a simple matter to have the oven at that temperature before starting in the baking.

In the case of coal ranges, the uses of the range, as well as the chimney and pipe leading to the chimney should be periodically cleaned of soot accumulation. It is generally a good idea to have a thin blanket of ash dust on the top of the oven, although in some makes of ranges this is not necessary.

Combination Ranges.
Combination coal and gas ranges should be capable of burning gas or coal separately or together without changing or removing any portion of the oven. Such ranges should also be equipped in such a manner that the gas in the oven cannot be accidentally turned on before the oven door is opened. This is a precaution that manufacturers of combination ranges are rapidly coming to appreciate as being vital. Otherwise gas could accumulate in the oven, flue and chimney until such time as the oven is opened and a match applied, at which instant an explosion would occur which might prove very serious.

In combination ranges it is also very important to make sure that the flue space above the oven is of ample enough proportions that the circulation of the heat from the fire is not obstructed and the draft not hampered. A comparison of various makes of combination ranges in respect to this feature will make significant this precaution.

The Gas Range.
In buying a gas range the same general precautions hold true as regards the coal or gas-coal combination range, except that special precautions should be taken to see that the mixing valves are adapted to your gas pressure and the kind of gas you are using. The dealer has usually looked into this before stocking the ranges, but nevertheless you should give it careful attention.

With some ranges a lowering of the gas pressure will result in an inability to cook. Some of the best makes of ranges on the market are capable of adjustment to such a degree that even with a low pressure they will still bake and cook without any trouble by merely adjusting to suit the pressure.

The Enamelled Range.
Practically all of the leading makes of ranges are now finished in either enamel or plain finish, as the customer may desire. These enamels are of such colors and tones that they harmonize very nicely with the color scheme of the kitchen. As blue and gray are now the predominating colors in kitchens you will find ranges finished in enamels of the same color. When considering the matter of enamel remember that there are two kinds of enamel—porcelain and vitreous. Porcelain enamel is by far less to be preferred than the vitreous, as it cracks off very easily when struck with a hard object, leaving the metal exposed to rust. Vitreous enamel, on the other hand, is treated and baked in such a manner that the final coat becomes an integral part of the metal, and even though the stove is subjected to the extent of chipping the enamel, the raw metal is rarely exposed, and the damage, therefore, is not so apparent and cannot progress. Vitreous enamel is also fired to a higher temperature than porcelain, and will stand, consequently, a higher temperature on your range without discoloration.

BUILDING YOUR RADIO RECEIVING SET

The Day of the Non-Regenerative Receiver Is at Hand.

By M. A. GURNEY, of Federal Telephone and Telegraph Company.

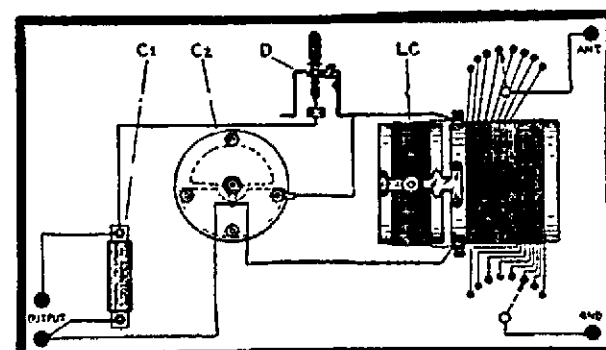

Usually the first outfit built by a "tube radio bug" is the simple crystal set. The simpler the better. He is venturing on a field not touched so far as he is concerned, and economy of cash and time are essential. Many such circuits have been devised for the amateur, but unfortunately in a large number of cases not much thought has been given to the fact that it will sooner or later be supplanted by a tube set.

The purpose of this article is therefore to give a few simple diagrams, each being a development, as it were, from the one preceding, and evolving out of the original

- C3, No. 120 grid condenser and mounting.
G, No. 122 grid leak.
J1, No. 1435-W filament control jack.
LC, No. 35 variocoupler.
R1, No. 23 rheostat for detector tube.
S, No. 16 V. T. socket.
1 No. 7 knob and dial.
1 No. 12 knob and dial.
1 No. 97025 switches.
16 No. 330-200 switch contacts.
4 No. 330-201 switch stops.
7 binding posts.

This eliminates much of the trouble experienced by most enthusiasts in building their sets. It will not be found necessary to tear down the old set in building a new one. The range of this circuit, using the tube, is about twice that of the crystal receiver, and the adjustment of the crystal is eliminated. Any of the standard makes of detector tubes may be used with this set, and if the builder wishes he may use any of the volt-and-a-half dry cell tubes in case he desires to eliminate the storage battery feature. No change will be necessary

CIRCUIT NO. 1

The Simple Crystal Receiver.

crystal set. With the parts found in the crystal set and but very slight additional expense a tube set can later be built. As time progresses and you wish to build a still more elaborate set you can use the parts you then have without discarding anything, and only adding the necessary transformers, bulbs, etc., you have, at nominal expense, the necessary materials for your elaborate set.

It will be noted that we have used the same loose coupler in all circuits. This coupler is of rather unique design and has the advantage of providing for very selective tuning and eliminating to a large degree the static effects so peculiar to summertime. The looseness of coupling also minimizes capacity effects between rotor and primary. In all of these diagrams we have avoided the regenerative circuit. The reason for this is that in the writer's experience greater modulation is possible with less distortion. The non-regenerative circuit does not interfere with your neighbor's set, and gives you better tone reproduction.

Now that the first flush of radio enthusiasm has passed we are beginning to realize that it is not volume of sound that we are after so much as modulation.

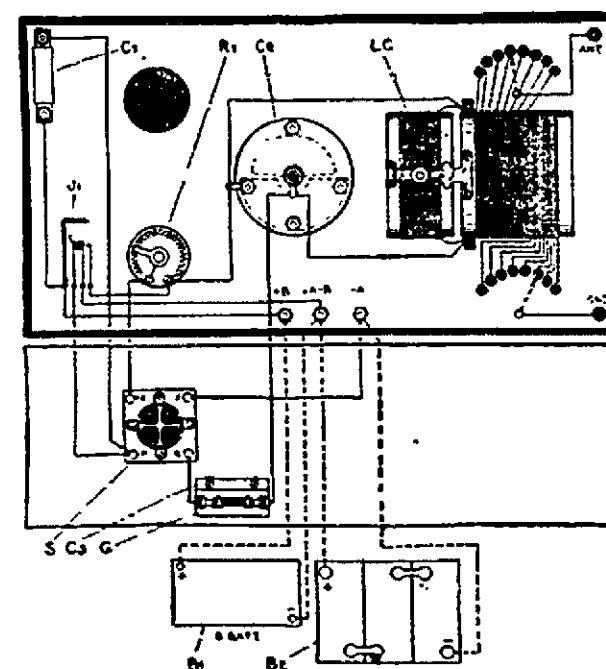

in that case except possibly the rheostat and the socket.

By adding one or two stages of audio frequency such as is shown in circuit No. 4 greater range and volume will be secured. In that case a panel of the same height by a different width than the one used for circuit No. 1 and No. 2 should be chosen. It can then be set alongside of the detector unit.

CIRCUIT NO. 3.
This circuit is fundamentally an elaboration of No. 1 and No. 2, with one stage of radio frequency and two stages of audio frequency added. The detector unit has been materially changed. The same variocoupler and condenser that was in the original detector unit will still have with us. We have discarded no parts, have wasted nothing, and we are now ready for the last word in long distance reception. The great mistake made by most radio enthusiasts is in discarding all of their old material, building a new set. This is due to a lack of advance knowledge of radio and the fact that there are so many so-called ultra-wonderful circuits coming out constantly.

Do not be disillusioned by descriptive adjectives into thinking that some other circuit is a little better.

CIRCUIT NO. 2

One Tube Set.

Circuit No. 1.
This shows variocoupler with two sets of taps taken off. The one set for antenna contact and the other for ground contact. This gives quite selective tuning. It will be noted there is no electrical connection between the rotor L. C. and the primary coil.

Federal parts have been used in the construction of these various circuits, although, if the builder desires, of course he can build his own coil. The parts needed for the crystal circuit are as follows:

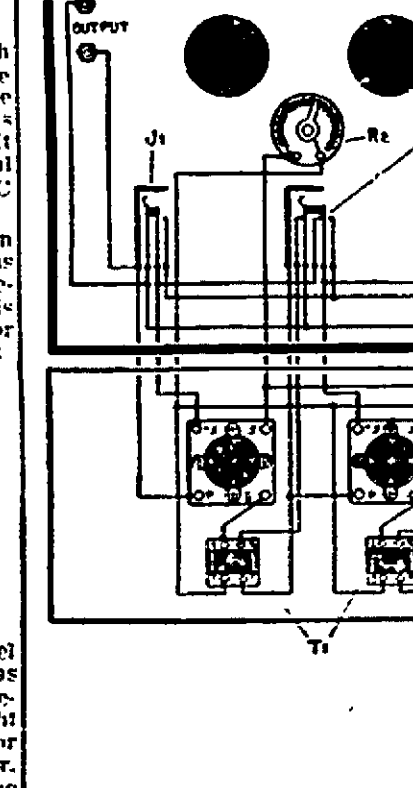

- C1, No. 5 shunting condenser.
C2, No. 417-plate condenser.
D, No. 17 crystal detector.
LC, No. 35 variocoupler.
1 No. 7 knob and dial.
1 No. 12 knob and dial.
1 No. 97025 switches.
16 No. 330-200 switch contacts.
4 No. 330-201 switch stops.
4 binding posts.

TUBE CIRCUIT NO. 2

If it is desired, the same panel may be used for circuit No. 2 as on circuit No. 1, by putting the detector rheostat either to the right of the secondary condenser or above or below the variocoupler. In fact, it can go in place of the crystal detector, thus leaving no exposed holes in the panel.

Very little is required other than already used on the crystal set, the necessary parts being listed.

CIRCUIT NO. 3—LONG-DISTANCE RECEIVER

If you follow these diagrams carefully there is no reason why you should not be the envy of your neighborhood. This is probably the most sensitive receiver that can be built for satisfactory large antenna operation. It may be used over ranges up to one thousand miles under ordinary conditions.

tions and under favorable conditions will be found to receive perfectly on very much greater distances.

A set in all respects identical with this one has been installed in the "Most Perfect Home in America," the home which appears in "The Great Idea," now being shown in this city. The set is being constantly used while you are looking at the film, and the most distant stations in Canada, Cuba and California have been received on it. While there are many good makes of transformers or variocouplers, Federal parts have been used on these particular sets, and have given very excellent results. As the circuit has been carefully worked out and proportioned to work at high efficiency with these parts, it is suggested that you follow the circuit absolutely. Parts required for circuit No. 3 are listed below:

- R1, No. 7661-W B battery.
R2, 6-volt storage battery.
C1, No. 5 shunting condenser.
C2, No. 44 7-plate condenser.
G, No. 122 grid leak.
J1, No. 1435-W filament control jack.
J2, No. 1438-W filament control jack.
LC, No. 35 variocoupler.
P, No. 24 potentiometer.
R1, No. 23 rheostat.
R2, No. 10 rheostat.
S, No. 16 V. T. socket.
T1, No. 226-W A. F. transformer.

ANOTHER HOUSEHOLD LABOR SAVER

The Housewife Spends an Amazing Part of Her Time in Washing Dishes.

Housewives from time immemorial have been so accustomed to washing cooking utensils and dishes by hand that they have come to look on this part of the routine of housekeeping as a necessary evil. Probably there is no other task that becomes so tremendously monotonous to the housewife as dish washing. How often we have heard the popular expression: "Man's work is from sun to sun, but woman's work is never done." The originator of this little verse no doubt had in mind dish washing.

Whether the dishes are washed after each meal or only once a day, it is an odious task that must ultimately be done if one is to continue to eat on dishes.

Many a wife has had a visit with her folks spoiled upon returning home to find a mountain-high pile of dirty dishes. The husband's office or shop labor-saving devices make him impatient at the thought of doing by hand that which could easily be done by machinery. He allows the dishes to accumulate, saying to himself that he can do them all at once and save much time and energy.

The Radio Scene Taken From the Film, "The Great Idea."

BEAUTIFUL LAWN IS A JOY

By J. H. BURDETT of National Garden Bureau.

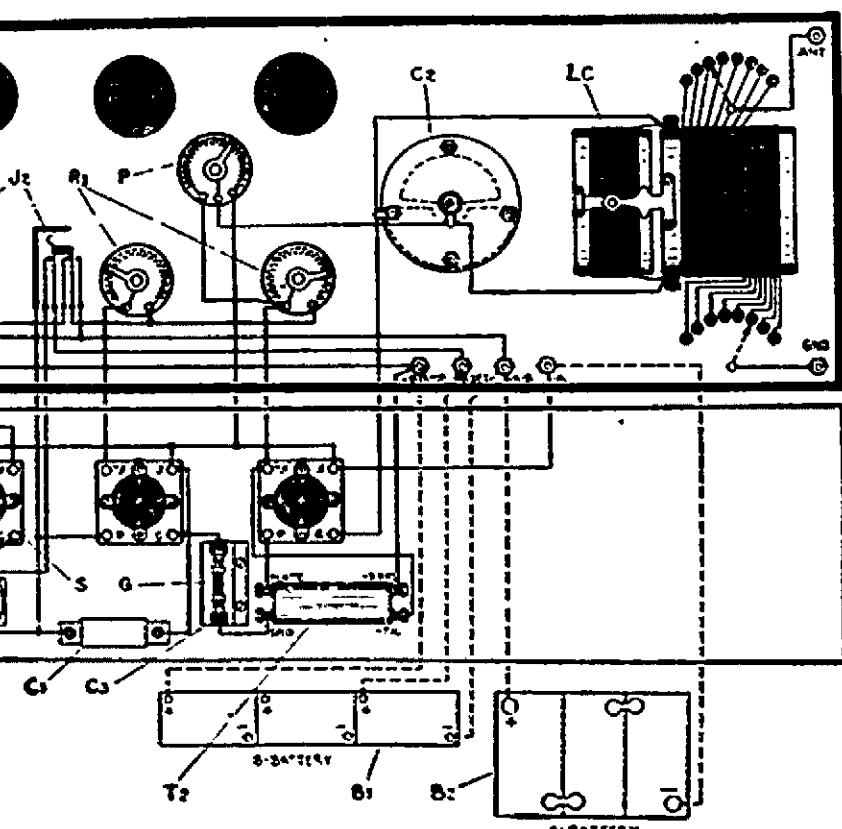

Lawn seed must be sown early in order to give the seedling time to "steel" and become established before they are called upon to reproduce. If the planting is late, the young seeds will have little chance to develop strength before reproducing, for the reason that experiments in grass growing have established the fact that seedling plants tend to go to seed the same time that the old plants do, the season being determined by the daylight and temperature. Seed must be covered if it is to germinate, and if it is simply thrown on a lawn already started, it is necessary to cover it with a rich top dressing of sand or loam well enriched.

Be sure in putting in a new lawn that the old soil is thoroughly loosened up for the first four inches on top. Mix sand, ashes, cinders, etc., but be sure that it is well mixed. It is not necessary to stir up more than the top four inches,

It is no longer in an experimental stage, but has been perfected and developed through a series of criticisms and suggestions. The electric dish washer has come to stay. It is a practical, business-like little servant which merrily churns away at the housewife's option, performing its duty without murmur or thought of recompense.

Details of Construction.
The machine should have no complicated mechanical parts and should be made of some heavy non-rusting material which will not chip or break easily. Copper, lined on the inside, seems to meet these conditions most admirably. This material presents a practically self-cleaning surface under action, and is not corrosive. For appearance's sake the exterior of the machine can be enameled or finished in any other manner consistent with good appearance. Enamel makes an ideal material because of the ease with which it can be kept clean and sanitary. The inlet should be so designed as to introduce water in a cone-shaped spray. This serves to soften the food and grease preliminary to washing action. The motor should

CIRCUIT NO. 3—LONG-DISTANCE RECEIVER

as the grass will not take deeper than that.

Above all things, do not think that a bargain in grass seed will grow a velvet lawn. Good grass seed is never on sale, and only good seed will produce the lawn you desire.

THE NEW Ideal Lumber & Coal Company

Office Located, at 895 Lawe Street enables us to serve you in a much more satisfactory, and efficient manner, thru the following advantages:

Direction of deliveries will all be made from our main office

Each order will be inspected before leaving the yards

Rush orders will be given more prompt attention

The gradual reduction of our overhead expense means a saving to you

You are cordially invited to inspect the American Magestone Flooring used in our new office, Textone, the new Sheetrock wall finish, used on the walls. Everyone interested in building should see these new Building Materials.

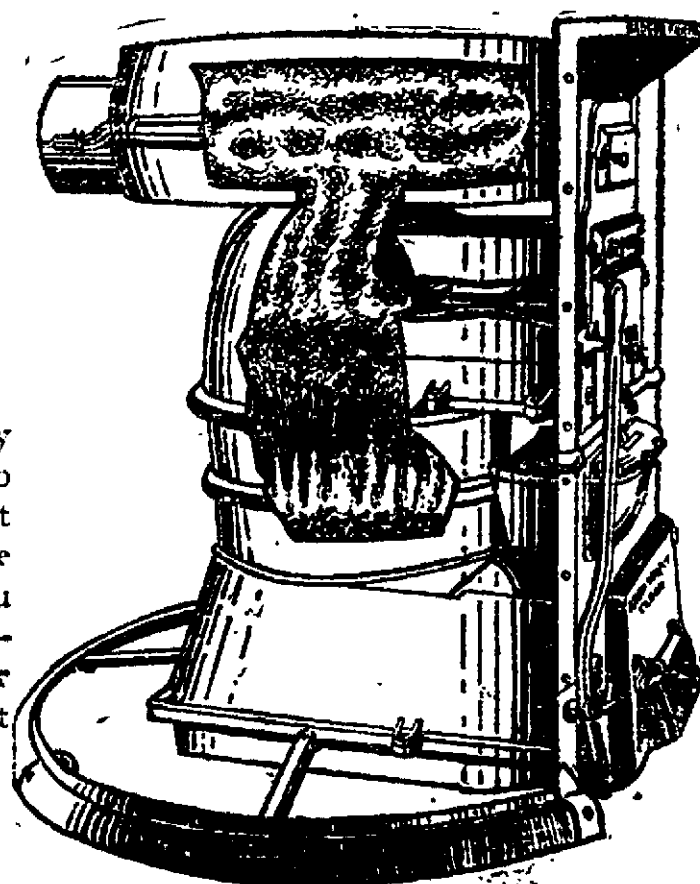

F-R-E-E

Valuable Souvenirs to all customers ordering fuel for delivery in ninety days. Orders must be placed before July 1st to get these souvenirs.

The policy of the Ideal Lumber & Coal Co., has always been — Quality — plus Service with Courtesy
TELEPHONE 230
for a representative who will be pleased to give you building material costs.

The Badger Supreme

Right now in this chilly weather, if you wanted to clean house, and have heat from the Badger Furnace at the same time you could without any inconvenience to you. This year and every year always at your service.

The Badger Supreme

Badger Furnaces that were installed in Appleton 23 years ago are still in operation and giving perfect satisfaction. This is just another proof of the reliability and proper installation that the Badger Furnace Company offers.

MR. HOME BUILDER—HERE IS YOUR HEATING SYSTEM

AN APPLETON
MADE FURNACE

BADGER SUPREME

THE PERFECT
HEATING SYSTEM

Most furnaces have a 24 inch firepot enclosed in a 42 inch casing. The Badger Supreme has 52 inch casing with the same size firepot. With this large casing you use more air and less fuel. This is just one of the many improvements in the Badger Supreme. Burns any kind of fuel.

Most furnaces have water pans holding about a gallon of water. The Badger Supreme water pan holds about 5 gallons of water. This affords an unusual amount of moisture evenly distributed throughout the home. This moisture gives you as much heat at 65° as the old type will at 70°.

GREATER SANITATION WITH DISH WASHER

Old Method Only Partially Removes Food

A careful investigation of specimens of tableware, picked up at random by medical authorities, discloses the startling fact that hand-washed dishes contain in varying quantities up to eight times as many bacteria as do machine-washed dishes. The reason for this is that it is impossible for a woman to put her hands in scalding water. With a machine she can be assured that there will be no disease traceable through tableware. It is impossible to keep germs out of a dish rag, whereas the dish washer does not object to being filled with the hottest water.

Disagreeable Features Eliminated. There is no handling of greasy dishes as they are simply stacked in the dish washer, the water put in and the valve turned. The dish washing is done in much less time and without the usual mess or bother. There is no labor connected with the dish washer, and a housewife can keep her hands white and soft due to the fact that she need not place her hands in the water.

Breakage is far less in a dish-washing machine of good design than is the case when hand washing is done. This is owing to the fact that the dishes do not move while in the machine, and at least one handling is eliminated, thus doing away with one possibility of dropping dishes. A very large percentage of dish breaking is traceable to dropping dishes while drying. As a dish-washing machine eliminates the necessity for hand drying and picking dishes out of hot water, it also eliminates to a very large degree the possibility of breakage.

Plumbing Connections. The dish washer should be connected with the water supply and drain pipes. All that is necessary then is to turn the switch and dish washing is begun. In planning the electrical outlets for the kitchen, as covered in a separate article in this paper, you will find suggestions for electrical outlets for such devices as dish-washing machines.

Size of Machine Required. The machine need not be much larger than a kitchen chair and can be finished so that it is a very

CARE OF TREES

Proper Pains Should Be Taken to Prolong the Life of Trees.

By C. L. MAY

Too few of us in building our new home realize the injustice to which we are subjecting our trees. We appreciate trees, it is true, and would be wildly indignant if told that in our haste to have a new home we are deliberately murdering the trees—our best landscape asset.

It is such a common thing to see the cellar dirt thrown out on the trees from one to three feet under their former level, that we scarcely give it second thought. In excavating our cellars we give very little thought to cutting off the main arteries of these trees—the roots. Yet if we deliberately do these things we can but expect that within a very short time the trees will show evidence of our carelessness. Cutting off roots invariably results in a proportionate number of limbs dying.

Burying the roots and trunk also

extensive study of tree surgery, and as they have representatives in every locality they would be glad to give you suggestions relative to the treatment of your trees.

WOMEN REQUIRE MORE LABOR-SAVING DEVICES

Marriage is usually entered into on the theory that it is a partnership affair. By partnership, it is generally understood a fairly equal sharing of responsibility and labor, so far as possible. A woman expects her husband to deliver the material results of his labors without complaint. She also feels that she has the right to select and use the labor-saving devices of her own household. In return she understands that she is to manage the home equally as well and without complaint.

This is sometimes impossible.

Hardly without our knowing it, times have changed in respect to household tasks. When our grandmothers kept house they had the help of servants. Nowadays the servant question has become so much of a problem that the average housewife has long since given up and is doing the work all herself. This transition has taken place more or less gradually so that the housewife in many instances, and certainly more frequently her husband, fails to realize that she is trying to cope with a situation which her grandmother would have considered hopeless. She is trying to do single-handed that which her grandmother accomplished by means of at least one servant. It therefore becomes vitally important that the modern housewife make use of every labor-saving device of which she can avail herself. Long ago the man of the house surrounded himself in his office and factory with labor-saving and time-saving devices, and, irrespective of change in the labor situation he has acquired the use of labor-saving devices as a matter of course. The far-sighted husband would be shocked at the indifference with which he is permitting his partner—his wife—to go on day after day, year after year, coping with an almost impossible situation with comparatively few household labor-saving devices.

A comparison of this kind serves to show the husband more wholly than he is, even though he is so thoughtful, in not realizing how unusual the partnership has become. Ultimately the wife comes to feel that possibly she is a failure. She does not seem able to hold her own end of the bargain. Her strength is not equal to the task.

The Solution. The washing machine and the electric fan are fairly familiar to all housewives. Their use, however, may be greatly improved by the use of the conditions under which they are used. A well-equipped laundry with convenient outlets for hot and cold water, a well-drained floor, good light and ventilation; electric sweeper so situated that it can be used at a woman's notice without carrying it up and down stairs. Many housewives now have a cleaner on each floor. Electric fans should be equally accessible. As a general rule, the electric fan in this paper, the electric dish washer is a valuable addition, and will save the housewife much aggravation caused by dull knives. The electric clothes wringer will be found an indispensable aid, as it will produce better and quicker results without the

tiring grinding of the old-fashioned contrivance. "The Electric Sucker" can be used to greater advantage in kitchen, dining room, sewing room or bedroom. It provides several electric outlets for various devices without the necessity of running separate cords to the wall plug.

The Suction Fan. This highly efficient apparatus, as covered in another article, makes possible constant ventilation of the entire house without affecting the heat of the home. Kitchen odors, which would otherwise prove very objectionable, are done away with, and the housewife is assured that the room in which she spends the largest part of her time will be one of the pleasantest rooms in the house. Considering the fact that times have changed so radically as regards the servant problem, thus making the greater use of electrical devices imperative, it is quite logical to assume that some attention should be given to the placement of convenience outlets. No husband who is employed in a shop would think of running a long cord across the room to plug in for an electric current in order to operate an electric drill or other piece of bench apparatus. He would consider such a procedure as but a temporary makeshift, and in no way compatible with shop efficiency.

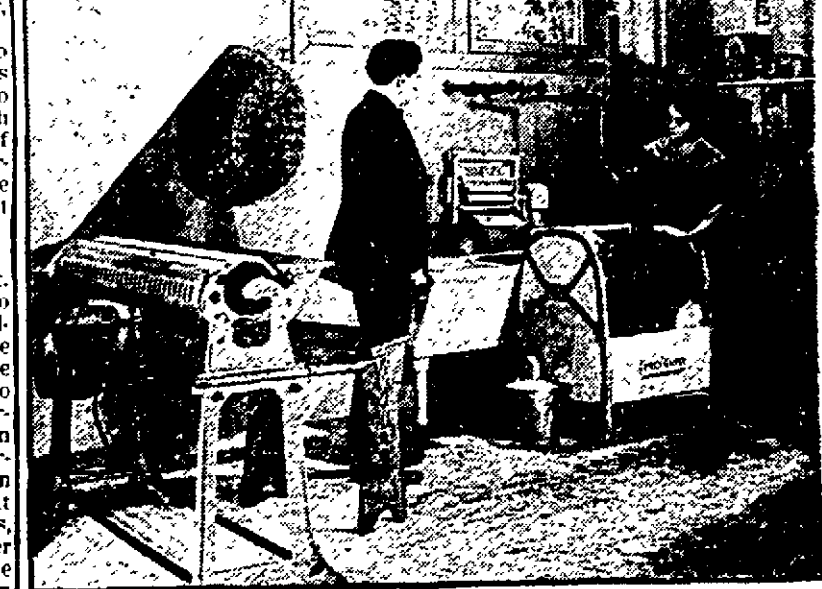

Ponder on a few such thoughts as these and you will see why it is that woman with her present-day lack of household help should be given, if anything, more consideration than the man in his shop.

MUSIC IN THE HOME

By D. B. MILLER
There is an old adage—"A Life Without Music is a Life Without Joy." There was never a truer one. You might say, too, "A Home Without a Phonograph is a Home Without Joy."

Unobtrusive when not in use, a phonograph is always ready to make more joyous your lighter moods or to comfort lonely hours. It proves a source of delight to all from the "two-year-olds" who chuckles at nursery rhymes, to "Grandmother," listening placidly to tunes of long ago.

"Music is essential," so say we all, and every kind of music is yours through the medium of a phonograph. No matter how your

A Well-Arranged Home Laundry.

taste runs—the phonograph is always ready to sing or play the kind of music you like. It will recite for you, too, if you wish.

It gives the children a wonderful appreciation of good music starting with the simple ballad and folk songs, on up through the lighter classics, then to operas and oratorios. They get to know the works of the famous composers and the renditions of the great artists of today and yesterday. Have you ever considered what a wonderful thing this is?

Company in the evening—your problem of entertainment is instantly solved by a single phonograph—musical at home—the possession of a phonograph makes you able to choose your own artists and what they will sing—and best of all—the dance—with the leading dance orchestras of the country there to play poppy fox trots or blitting waltzes.

As a piece of furniture, the phonograph enhances the furnishings of any room. Many styles are to be had, from the small upright model, built on simple graceful lines, to the elaborate console, a perfect piece, fashioned after a style made famous by an old master.

The purchase of a phonograph solely because of cheapness, usually proves a boomerang to the purchaser. Instruments sold on a price appeal alone are always nondescript, constantly requiring adjustment, and with an inferior tone. A standard make proves the cheapest in the long run.

FINANCING YOUR NEW HOME

The Building and Loan. Buying a home is a great deal like buying anything else, except that usually the method of financing the buying of the home is a little different than for items involving a smaller expense. If you buy a new car or an umbrella, you usually pay for it in cash, or at least within a few days. In buying a home, it is usually necessary to borrow the money. It usually requires the strong arm over a period of a few years as not to interfere too strongly with the family

budget plan. Probably the greatest reason why more people do not own homes is that the habit of systematic saving has not become more universal. On the other hand it seems to be quite common to find people with the idea that all that is necessary to buy a new home is a good job and a good face. This is a mistaken idea. A home cannot be financed without a certain amount of cash, and the cash cannot be acquired without a definite savings plan.

Owing to the fact that most of us need some compelling force outside of our own determination when it comes to saving money, there have grown up several different methods of assisting prospective home builders and owners in the financing of their projects. Every large bank, real estate organization, and other institutions of a like nature are doing everything in their power to assist the prospective home owner. Both directly and indirectly the home owner is a valuable asset to the bank and the community.

Building and Loan Idea. The Building and Loan Association is essentially a co-operative organization, and is known by different names throughout the various states of the union such as "Co-operative Bankers," "Building and Loan Associations," "Homestead Associations" and "Savings and Loan Associations." Based on the present method of operation, the last name designated is more accurate and should be in universal use. Lack of uniformity, however, has led to the use of all of the above names, and consequent confusion. There is no financial connection between the local building and loan associations throughout the country, therefore, the adoption of one name for all seems impossible.

The functions of the building and loan associations are two-fold: First—"To teach thrift and systematic saving of money."

Second—"To encourage its members to own their homes." Under the first function, the saving members of the association are provided with a place where they can deposit from time to time such amounts of money, either small or large, as they are able to save from their incomes. Under the second plan the co-operating members are enabled to secure loans to aid them in the building or buying or improving of a home, repaying the principal and interest in small

payments. Building and loan associations occupy a two-fold relationship in the communities in which they operate: First—They are savings societies organized for the purpose of promoting thrift. Second—They are lending societies for the purpose of promoting home ownership. Because one must save before he can buy, the saving feature has been named first.

Historical Development. The first of these associations in this country was organized at Frankford, Pa., now a suburb of Philadelphia, on January 3, 1831. It was called the Oxford Provident Building Association of Frankford. At the present time there are approximately 2,200 building and loan associations in the city of Philadelphia alone, these having savings deposits aggregating \$17,469,117. There is twice as much money in all these national and state banks and trust companies in Philadelphia, according to an editorial in the American Building Association News of February (1921) issue. This has been true ever since the funds of the first association were applied to assisting its members in procuring homes. While the word "building" was accurate in its description of the activities of the first association, such changes have been made in their methods that at the present time the word "building" as a part of the name is a misnomer.

National and State Endorsement. The building and loan association is a co-operative institution chartered by the state and made up of members who have associated themselves together for their mutual benefit. Each member has a voice and a vote in the selection of the officers and directors of his local association. Each local association is independent and distinct from other similar associations of the same organizations are under state supervision and inspection, and are favored by the laws of every state. The state laws have not only recognized the high value of these institutions, but congress has shown its appreciation by exempting these institutions from such taxation as other corporations have been subjected to in every revenue law that

THE WARRANTY DEED

Some of Its Requisites and How It Serves the Property Owner.

People are generally more or less familiar with the general warranty deed. Its purposes are fairly well understood, but it is rather surprising to know the number of people who do not know the prime essentials of the deed, nor the steps that are necessary to be taken when they receive a deed.

The warranty deed has for its purpose that of conveying the entire title to the designated real estate held by a certain person or persons to certain other person or persons, and it guarantees to them and to their successors in title, the full, uninterrupted and peaceable possession of the property against all intrusion or violation. It is very necessary as well as important that the name of the grantor or grantors in the deed should be exactly the same as expressed in the deed whereby he or they acquire the property being conveyed.

If an individual acquires title to a certain property in one name, and for any reason, such name has been changed, by marriage or otherwise, such change should be clearly stated. Also the husband or wife of the grantor or grantors, depending on the case, should sign the deed for the purpose of releasing dower. If the grantor is unmarried, that fact should be clearly indicated, as otherwise it would appear in the abstract of the title to that particular property as a defect in the title.

The deed must be signed by each of all the grantors, as well as their husbands or wives, in the presence of two witnesses, not parties to the deed. Each signature must also be acknowledged before a notary public, justice of the peace or other official who is authorized to take acknowledgments.

Quit-Claim Deed.

A quit-claim deed is one in which the grantor merely transfers and relinquishes to the grantee what ever right or claims he may or might have in such property described without reciting that he has any claim therein and without obligating himself in any manner shape or form to give the grantee the possession of said premises or to protect him in his rights therein. It is executed in the same manner and with the same sort of formality as the warranty deed.

It is specifically provided in the statute that all deeds of conveyance conveying title to real property must be recorded in the county recorder's office of the county in which such property is situated.

After Receiving Deed.

Immediately upon receiving a deed, make sure that the party giving the deed is the owner of the property to be conveyed and that his title is clear thereof, and that he has the right to execute and deliver the deed.

In the description of the property as expressed in the deed, exactly coincides in each detail with the description of the property to be conveyed, expressed either by metes and bounds, or if it has been platted, and the plat recorded, the number or such other description by which the property is identified and shown on the plat.

In the third place, make sure that any mortgages or other incumbrances to be assumed are properly and fully noted on the deed.

In the fourth place, after all these matters have been fully determined to your entire satisfaction, see that the deed is properly signed, witnessed and acknowledged. If then it is found to be correct, take the deed, as soon as delivered to you, to the county auditor for transfer to the tax records. Then from the county auditor to the county recorder where the deed must be left for record.

If by chance you are not familiar with the requirements of deeds, you should be all means have the deed and abstract examined by a competent attorney.

ABSTRACT OF TITLE

A Very Much Misunderstood Document.

Many purchasers of real estate are under the impression that when they receive a deed with the abstract of title that the title to the property is perfectly established, and that having an abstract makes the title good. This is a mistake. An abstract of title is nothing more nor less than a copy of, or an extract from, the records, showing the history of such real estate. It is meant the various transactions in which this particular piece of real estate has figured. It may show a perfectly good title or it may show, on the other hand, that the title is not good, and its purpose, therefore, is to secure the record or history of said real estate in a short and concise form for the purpose of examination.

General Appearance.

One common form starts with the heading describing the land abstracted. Then, beginning with the grant from the United States which includes the premises abstracted, sections follow which show in chronological order each transfer of said property from one person to another, or by deed, will, court procedure or other method of conveyance. Each section is devoted to one particular transfer and sets out the important and essential points of the deed or other instrument or instruments by which the property is conveyed.

If any defects in the instrument of conveyance exist, or any such instruments are missing, such facts must be clearly set forth in the abstract.

Following the deeds and other instruments of conveyance are usually sections devoted to recorded mortgages that have been placed against said property and reciting whether such mortgages have been satisfied and canceled.

Leases are next covered—showing whether they have expired, been canceled or are still in force and effect, or if the lessee has no lease, a recitation to that effect.

Sections are then devoted to showing the mechanic's liens, pending suits, living judgments and foreign executions, if any, giving details in each case which would enable a person examining the abstract to determine whether they are now, or may become at a later date, liens on the premises or property.

Taxes and such assessments are shown, followed by the certificate of the abstractor that he has examined the official records in the county and that the abstract shows every instrument of record affecting the title to said premises or property as shown in the indexes in the various county offices. It does not show instruments not of record, nor is it, on the other hand, an opinion of the title.

From the foregoing short description of an abstract and its purpose, it will be readily seen that in all cases an abstract should be made by someone who is thoroughly familiar with the laws of conveyance and the transferring of the title and real estate. He should also be familiar with the methods of recording and indexing the various instruments of conveyance, etc., in order that all instruments may be readily found, if on record, and any defects of the instruments properly noted.

It will be readily understood that it is of extreme importance that all conveyance or other instruments pertaining to real estate are properly drawn and recorded, and that finally it is of absolute necessity to have your abstract thoroughly examined to make sure that your title is clear so that you will have no trouble in case you wish to sell.

SELECTING COLORS

FOR YOUR HOME

By PAUL GREEN of Atlas Educational Film Co.

How often have we heard that expression—"This goes well with that." Usually the person who has made the remark has some reason for feeling that it is right, although in the majority of cases he would find it difficult to tell you why. Think well with that. He usually considers the decision more a matter of taste than judgment. A great many people in carrying out this logic have come to make use of a

few of the principles governing harmony, but owing to a lack of complete knowledge have misapplied these principles. This is made clear by the fact that in selecting colors many people feel that harmony of color implies a choice of colors of a very similar nature.

One woman of the writer's acquaintance invariably dresses in brown. Recently she tried on a silk sweater of an altogether different color. She was immediately struck with the beauty of the combination, but was shocked at the idea of her trying to wear such a combination. Pressed as to her reason for this feeling she replied that as her hair was brown she must wear something brown to go with it. Having made the choice of brown for a part of her costume she felt that to be safely within the rules of harmony the balance of her costume should be of the same color.

All colors in the spectrum can be made from the three so-called primary colors—red, blue and yellow. The artist in painting the most elaborate canvas imaginable uses but the three colors. No bit of color on his canvas but which contains at least a trace of the other two colors; and never does he use any one of the three colors in its raw form. From the artist's standpoint some of the most beautiful and harmonious effects imaginable are produced when dealing in so-called complementary colors. By this we mean colors which if mixed together in the right proportions would produce a neutral gray.

Secondary colors can be made by mixing the primaries. Thus, orange is a secondary color composed by mixing red and yellow. Purple is a secondary color composed by mixing red and blue; green by mixing blue and yellow. The mixture of blue and yellow, producing a secondary color, green, is complementary to the primary, red. If the red is composed of the proper amount of both the yellow and the blue then the red in this case is in perfect harmony with the green, although it is practically, if not exactly, its complement. A raw red which has none of the yellow or none of the blue in it would be out of harmony with the green.

Another example will serve to illustrate the meaning still further. Purple, which is made from a mixture of blue and red, will be a complement to yellow, but to make the yellow in perfect harmony with the purple, the yellow must contain a certain amount of both red and blue.

By bearing these fundamentals in mind and using the colors carefully, you can be assured of absolute harmony even though you may work a perfect riot of color. This is why we so often hear the expression, "Nature always deals in harmonies." Nature left to herself mixes the primary colors perfectly, keeping the rawness of the primaries from conflicting. The blue atmospheric color of out-of-doors insures in every case at least the common color blue being in all other colors. Other predominating outdoor colors, such as the green of foliage, etc., furnish their part, and by reflection and absorption work with the other colors for an all-around color harmony.

THE SECRETARY

By C. A. REHM of Atlas Educational Film Co.

Have you ever given any thought to the word, secretary? It, indeed, has a meaning.

It serves as a place to put letters and other manuscripts for future reference. Some of the world's greatest literature is made up of letters. You have read, of course,

BUILD YOUR HOME OF CONCRETE BLOCKS Stuccoed With Portland Cement

Residence of Adolph Hamilton, Wyman Street, New London, Wisconsin
Built of Concrete Block Stuccoed With White Portland Cement

Build a Permanent Home

The frame house of today is built of lumber that is not any too good to start with. Good lumber is becoming scarce and very expensive. Then it shrinks, cracking the plaster, rots and needs continual painting and repairs. It is apt to go up in smoke any time.

A home built of concrete blocks is not expensive. Does not cost \$200 more than a house of frame construction.

Dry

Concrete Blocks properly made absorb less water than any other building material on the market bar none. The addition of 3/4 inch of stucco on the surface makes them absolutely watertight.

Permanent

Concrete blocks are the only building material that does not rust, decay or burn; that grow stronger with age. The stucco on blocks likewise is permanent. The suction of the concrete block draws tiny stucco teeth into the block. As the wall becomes older the bond becomes tighter and tighter until soon the stucco exterior becomes an inseparable part of the wall itself. The stucco is applied on a base that cannot shrink or swell, buckle or bend.

Beauty -- Adaptability

With the many different finishes in color and texture a stucco house has a permanent beauty. It is adaptable to the more modest home as well as the most stately mansion.

Warm

The walls of the house are absolutely tight. The air space in the blocks act as an insulator. The furring and plaster forms an additional dead air space.

Saving

The saving in one painting of the house will pay for the extra cost. In addition you will burn from two to three tons less of coal. The rooms on the windy side will be just as warm as the others. Your depreciation will be reduced from 4% to 2%. On a \$5000 house this will be a yearly saving of \$100. Your insurance will be reduced and your resale value will be higher.

Where Used

The Model Home built in Washington during the nation wide Better Homes week to represent the most modern practice in residence construction was built of Concrete Blocks Stuccoed. Thousands of homes throughout the country are being built of this construction and are giving the best satisfaction. Wisconsin Rapids has 25, among them being the home of that city's principal lumber dealer. The Paine Lumber Company of Oshkosh last year erected 6 concrete block houses and are building 6 more this year. Inspect the home of Mr. Hamilton in New London.

FOUR FOUR SUCCESSIVE YEARS GOCHNAUER'S CONCRETE BLOCKS NOT ONLY HAVE MET THE REQUIREMENTS OF THE STATE BUILDING CODE, BUT ALSO THE HOOVER NATIONAL CODE, AND THE SPECIFICATIONS OF THE AMERICAN CONCRETE INSTITUTE FOR HEAVY LOAD BEARING WALLS.
